During my UM MFA enrollment a forward to existing MFA registration or MS service sign-in page occurs.....	10

I deleted the app/I have a new phone and now I cannot login anymore.

I installed an alternative authentication method:

You can click on “Use a different verification option” when trying to log in, you can then get a text (SMS) with a login code on your phone or receive a phone call (dependent on the option you configured).

You can add the app again to your authentication methods on by logging in with the text (SMS) function or Phone call. If you added your cell phone number as an alternative login method, you can click "Use a different verification option" during login and have an SMS sent to your phone or receive a phone call.

For security reasons, we require additional information to verify your account

Open your Microsoft Authenticator app and approve the request to sign in.

...

[Use a different verification option](#)

You can add the app again at <https://aka.ms/mfasetup> by logging in with an SMS code or phone call.<https://aka.ms/mfasetup>

I did not install an alternative login method:

To reset your MFA authentication you will need a Temporary Access Pass (TAP) code. Prior to sending you a TAP-code we need to verify your identity:

- Fill in the ‘[Request MFA reset code](#)’ form on our [Self-Service Portal](#).
- OR visit one of our [Front Offices](#) with a valid ID (not a UM card). Mention your ticket number during your contact with us.

After verifying your identity we delete the ID-copy and send the TAP-code to the email address you provided.

We will process your request during our [opening hours](#). The TAP-code will be **available for 2 hours** after it has been sent.

[Multi Factor Authentication \(MFA\) extended with number matching.](#)

From **27 February '23** Microsoft will activate ‘*number matching*’ as default setting for Microsoft Authenticator – notification users. When you respond to an MFA notification using the Authenticator app, you will be presented with a 2-digit number or you need to retrieve the 6-digit one-time password code from your Authenticator App. Type that number into the corresponding window to complete the approval and continue the login process. Also please check the additional information below.

[Why does this change?](#)

This feature is intended to prevent accidental approval of fraudulent login attempts (as a result of so called ‘MFA fatigue’ or ‘push bombing’).

What does this mean for me?

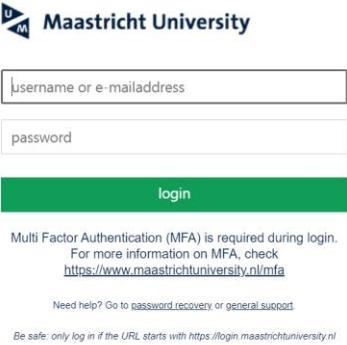

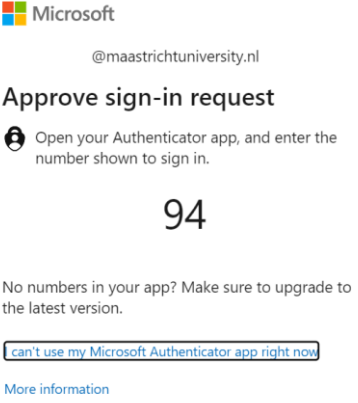

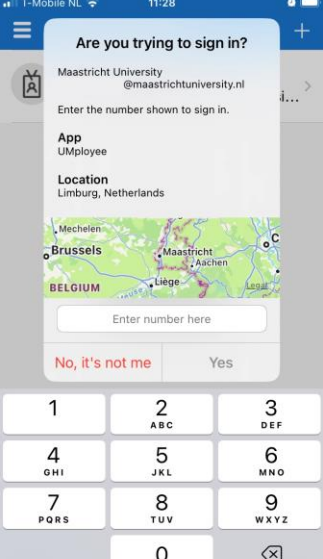

What changes for you depends on your default MFA sign-in method.

- At website <https://mysignins.microsoft.com/security-info> you see which ‘Default sign-in method’ is configured for your Maastricht University.
- Check the table below to see what changes for you.

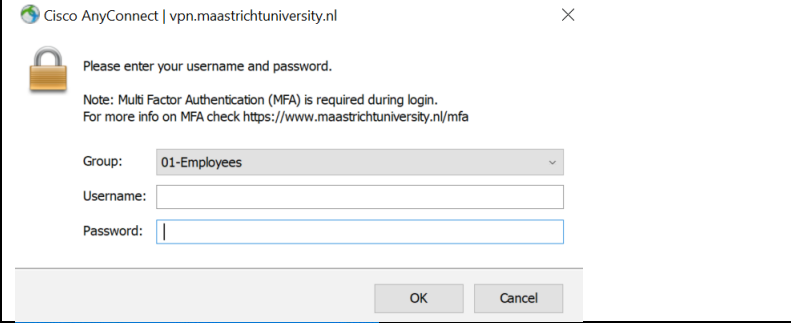

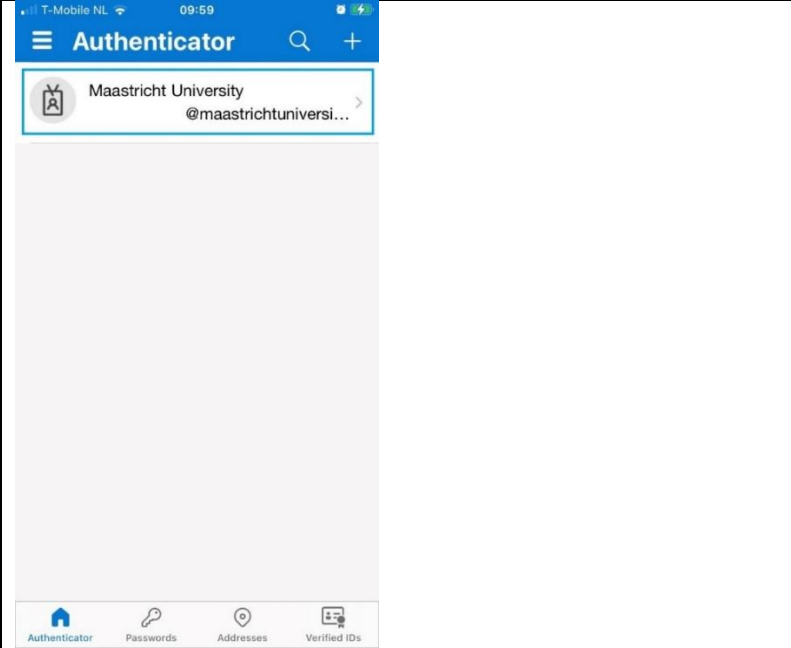

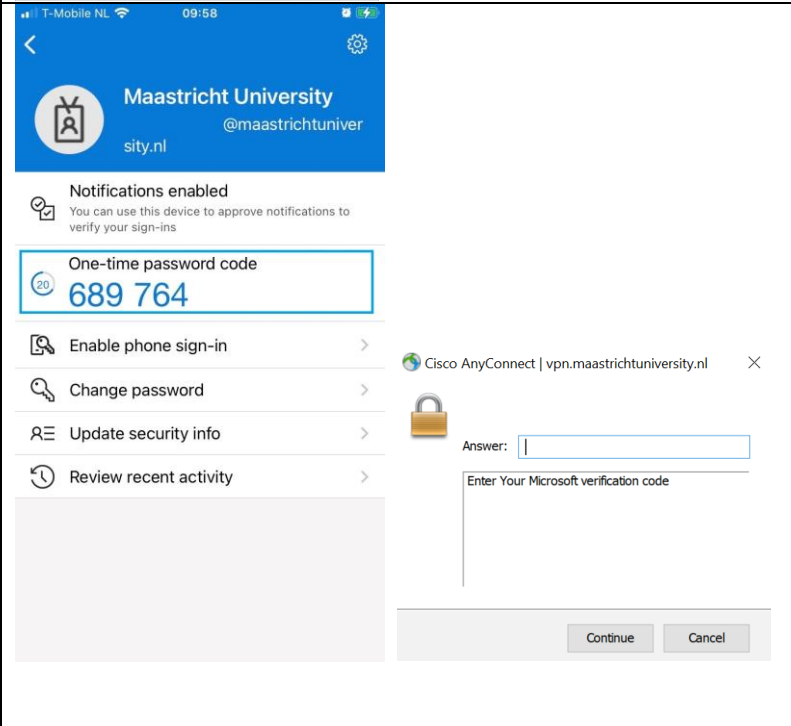

Your configured Default sign-in method.	What changes when logging in to Webbased UM Services?	What changes when logging in to VPN or VDI?
Microsoft Authenticator – notification	Enter the 2-digit number shown during login.	Enter the 6-digit code shown in the Authenticator app (or hardware token).
Authenticator app or hardware token	No change.	No change.
Phone - text	No change.	No change.
Phone - call	No change.	No change.

- Check the detailed explanation below for the login process on Maastricht University webservices, VPN and VDI.

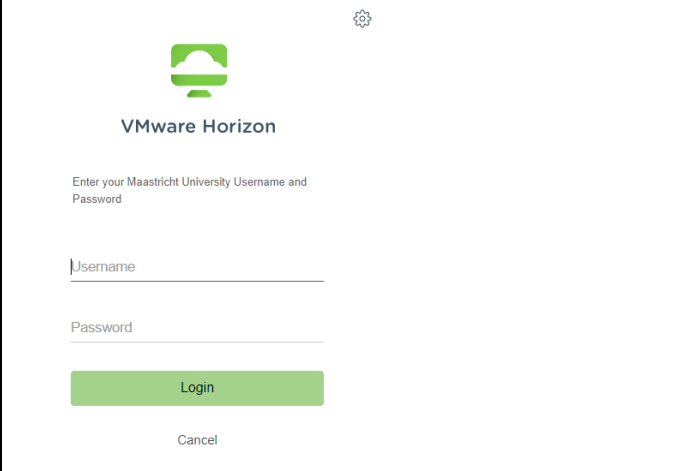

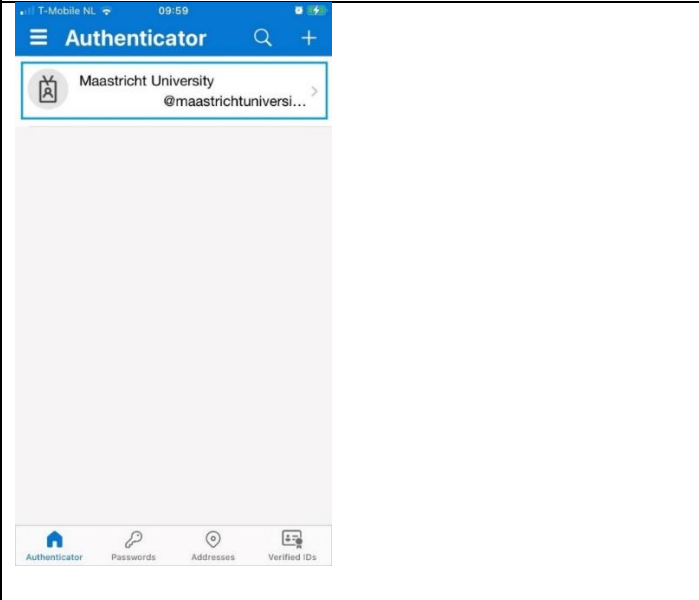

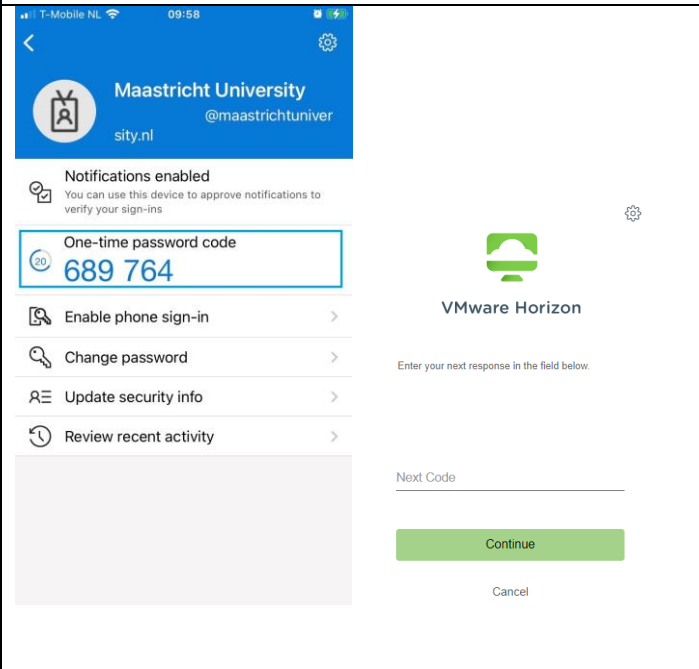

Log in to UM web services:

 <p>The image shows the Maastricht University login page. At the top left is the Maastricht University logo. Below it are two input fields: 'username or e-mailaddress' and 'password'. A green 'login' button is positioned below the fields. Underneath the button, there is a notice about Multi Factor Authentication (MFA) and a link to the MFA information page. At the bottom, there is a small note about the URL.</p>	<p>1. Log in with your Maastricht University account and password and click 'login'.</p>
 <p>The image shows a Microsoft Authenticator sign-in request. It features the Microsoft logo and the email address '@maastrichtuniversity.nl'. The main heading is 'Approve sign-in request'. Below this, there is an instruction to open the Authenticator app and enter a number. The number '94' is displayed in a large font. There is also a note about upgrading the app and a link for users who cannot use the app.</p>	<p>2. A 2-digit number will appear in your browser.</p>
 <p>The image shows the Microsoft Authenticator app interface on a mobile device. A sign-in request is displayed, asking the user to enter a number. The app shows the user's name 'Maastricht University' and email '@maastrichtuniversity.nl'. It also displays the app name 'UMplovee' and the location 'Limburg, Netherlands'. A map shows the location in Belgium. At the bottom, there is a numeric keypad for entering the number.</p>	<p>3. In case the mentioned App and Location are correct, enter the 2-digit number that appeared in step 2 in the Microsoft Authenticator App and click Yes to continue.</p>

Log in to VPN:

 <p>Cisco AnyConnect vpn.maastrichtuniversity.nl</p> <p>Please enter your username and password.</p> <p>Note: Multi Factor Authentication (MFA) is required during login. For more info on MFA check https://www.maastrichtuniversity.nl/mfa</p> <p>Group: 01-Employees</p> <p>Username: <input type="text"/></p> <p>Password: <input type="password"/></p> <p>OK Cancel</p>	<p>1. Log in with your Maastricht University account and password and click OK.</p>
 <p>T-Mobile NL 09:59</p> <p>Authenticator</p> <p>Maastricht University @maastrichtuniver...</p> <p>Authenticator Passwords Addresses Verified IDs</p>	<p>2. In your Microsoft Authenticator App, click your Maastricht University account.</p>
 <p>T-Mobile NL 09:58</p> <p>Maastricht University @maastrichtuniver city.nl</p> <p>Notifications enabled You can use this device to approve notifications to verify your sign-ins</p> <p>One-time password code 689 764</p> <p>Enable phone sign-in ></p> <p>Change password ></p> <p>Update security info ></p> <p>Review recent activity ></p> <p>Cisco AnyConnect vpn.maastrichtuniversity.nl</p> <p>Answer: <input type="text"/></p> <p>Enter Your Microsoft verification code</p> <p>Continue Cancel</p>	<p>3. Enter the 6-digit One-time password code from your Microsoft Authenticator App (or hardware token) in your VDI login screen and click continue.</p>

Log in to VDI:

	<p>1. Log in with your Maastricht University account and password and click OK.</p>
	<p>2. In your Microsoft Authenticator App, click your Maastricht University account.</p>
	<p>3. Enter the 6-digit One-time password code from your Microsoft Authenticator app (or hardware token) in your VDI login screen and click continue.</p>

Why is Multi Factor Authentication necessary?

Maastricht University uses many information systems within which sensitive (personal) data is processed. UM's security policy and the obligations for processing sensitive data within the General Data Protection Regulation (GDPR) require additional security measures.

To protect these systems and data, Maastricht University uses authentication in two steps: Multi Factor Authentication (MFA). Please visit <https://www.maastrichtuniversity.nl/cyber-security> for more information on UM's security policy.

Why is logging in with only my account and password insufficiently secure?

Information systems may contain data to which others are not permitted access. This may include research data, examination results, or bank account numbers. Passwords may be retrieved with relative ease, for example when you:

- Are a victim of a virus infection or other malware;
- Use your UM password on other systems websites;
- Download software from the internet which contains malware;
- Accidentally activate incorrect links in a phishing email;
- Have provided your password to others.

MFA requires authentication in two steps. Not only a password (*something you know*) is required, but also a second verification such as a code in the authenticator app on your smartphone (*something you have*), to prove your identity.

Which applications require MFA?

Initially on UM web applications (e.g. HR- and procurement system, Student Portal, Canvas), VPN and VDI (Virtual desktop for UM employees and students).

How do I register my account for MFA?

Via <https://aka.ms/mfasetup>

Check the manual on the MFA website: <https://www.maastrichtuniversity.nl/mfa>

How can I change my MFA settings? How can I add or remove a sign-in method?

Within the UM implementation we will use the Microsoft Authenticator app as the default method. If you can't or don't want to use the app, you can setup MFA with alternative methods such as an SMS or phone call to a work or private phone number. You can change this via <https://aka.ms/mfasetup>.

We highly recommend you to add an additional login method next to your default method.

This way there is always a way to access your account in case something happens with your default method. See also the extensive manual on the website <https://www.maastrichtuniversity.nl/mfa> for more information

I do not have an UM smartphone and I do not want to use the Microsoft Authenticator app.

How can I log in with MFA? (employees)

In this case you can configure alternative methods. This option allows you to receive an SMS code or phone call to your private phone number. These options are free of charge.

You can configure alternative methods via <https://aka.ms/mfasetup>. See more information on how to configure alternative methods in the extensive manual at the option 'MFA configuration based on other login method' on the website: <https://maastrichtuniversity.nl/mfa>.

Do I have to login with MFA often?

MFA login is requested for login to UM web services (e.g. Intranet, HR- and procurement system, Student Portal, Canvas), for VPN and for VDI (Virtual desktop for UM employees and students). UM web services work with Single Sign On (SSO) in your internet browser. This means that only a single login is required for using UM web services, including MFA, as long as your internet browser window is open. This browser-login remains active during your workday.

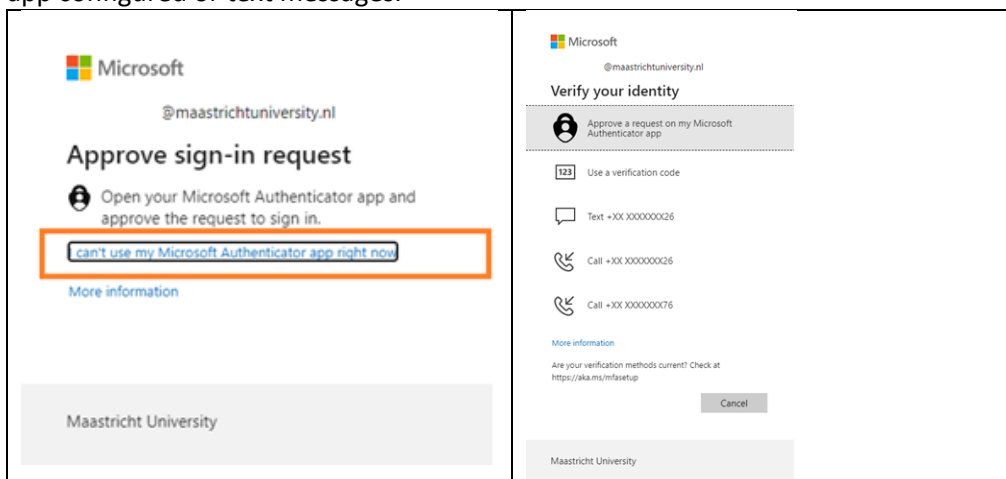

TIP:

Keep your Internet browser window open / active, to prevent regular MFA login requests for UM web applications. Make sure to always lock your workstation when leaving your desk or workplace. After locking your workstation, your session will remain open /active.

Also check: [Lock your screen, even if you leave your PC for a moment - About UM - Maastricht University](#)

I (temporarily) don't have a smartphone available. What should I do?

Use one of the alternative sign-in methods you can configure. This may be a phone call by Microsoft on an additional phone number (work or private), or an extra device which has the authenticator app configured or text messages.

Note: this pop-up screen is currently only available on UM web applications. It is not available on VPN or VDI.

I am unable to login and I don't have an extra sign-in method configured.

Contact Servicedesk ICTS. We can provide you with a temporary access pass (TAP). Before we can provide you with a TAP you need to send us a picture or copy of a valid ID (such as a driver's license or passport) so we can verify we send the TAP code to you and not someone else pretending to be you. **We highly recommend you to add an additional login method next to your default method**, to prevent this from happening.

What is a Temporary Access Pass (TAP)?

This is a code (valid for 2hours) which enables you to add an extra sign-in method (via <https://aka.ms/mfasetup>) should you not have any other registered MFA sign-in methods. The TAP also enables you to change your default sign-in method.

Is it also possible to receive text messages or phone calls for MFA?

Yes, you can add an extra sign-in method via <https://aka.ms/mfasetup>

I have new / spare smartphone since my smartphone is old/broken/ stolen / lost. Now what?

1. FIRST; reconfigure the authenticator app on your new / spare phone at <https://aka.ms/mfasetup> (select Add sign-in method) before disposing of the old phone.
2. SECOND; Remove your old/broken/stolen/lost phone via <https://aka.ms/mfasetup>.

I forgot my smartphone and cannot log in to MFA secured systems now. What should I do?

- Collect your smartphone, if possible.
- When using an MFA secured UM web application, use one of the extra verification options you configured by choosing '*Use a different verification option*'.
- Contact Servicedesk ICTS when trying to log in to VDI or VPN or in case you do not have an extra verification method configured.

I do not have an internet connection on my mobile telephone, will the app still work?

An internet connection is required for app configuration

Once the app is configured, depending on your configuration you can also use the time-based, one-time passcode in the app offline.

Can I authorize someone else to log in on my behalf?

No, this is never allowed. Passwords and MFA are for personal use only and cannot be transferred.

Why does the MFA app request access to the camera?

The app only requires camera access to scan a code during installation / configuration.

Can I use a Yubikey as extra sign-in method?

Yes you can with several Yubikeys in combination with a software authenticator.

For more information: [Using YubiKeys with Azure MFA OATH-TOTP – Yubico](#)

Why does MFA work differently on UM web applications compared to VPN and VDI?

Both VPN and VDI currently use a different underlying technology compared to UM web applications, which results in a somewhat different user experience.

Maastricht University uses MFA. Can I also use MFA for private purposes?

MFA is already widely used by the Dutch government (DigiD) and banks (for secure online banking).

Is MFA required during digital exams?

No.

I do not have an UM smartphone, won't use my private telephone for work and the advised alternative methods are not an option for me. How can I log in with MFA? (employees)

Contact your information manager. After your information manager approves this request it will be forwarded to ICTS and you will be informed on further actions as soon as possible. Such requests will be critically assessed because there are costs involved for other solutions.

Is MFA also mandatory for resource/system accounts?

No, not at this time. If this changes you will get informed.

During my UM MFA enrollment a forward to existing MFA registration or MS service sign-in page occurs.

You can resolve this by using an "incognito/inprivate"-tab in your browser. [Instructions](#)
