University College Maastricht Course Catalogue 2021-2022

A NOTE ON THE 2021-2022 UCM COURSE CATALOGUE
– OVERVIEW OF MOST IMPORTANT CHANGES

On behalf of the UCM Curriculum Committee, the contributing faculties and the teaching staff, UCM is pleased to present the course catalogue for 2021-2022. The publication of the new course catalogue brings with it the usual changes of coordinators, course titles, periods, prerequisites and the like, all detailed in the new edition. Furthermore, there are several new courses, while others have been retired. All of these changes have been carefully reflected upon in consultation with the Curriculum Committee, the Educational Program Committee, the Academic Council, staff and faculties. To help you make an informed course selection, please have a look below for a brief overview of the most significant changes.

New & discontinued courses:
UCM is happy to announce that several new interesting courses, skills and projects will be added to the curriculum next academic year.
Most significantly, there will be a change in UCM's core curriculum. In response to a long-standing demand, UCM has decided to replace Theory Construction and Modelling Techniques (TCMT) with a new core course called **COR1006 Science, Reason and Human Progress**. To make sure we do not lose the valuable content of TCMT in the curriculum the course will still be offered though; not as a core course, but as an elective course: **SCI1001 Theory Construction and Modelling Techniques**. Please note that although TCMT has received a science code, it can be declared as a course in either the Sciences or the Social Science concentration, depending on your individual curriculum planning. Also, those students who have taken TCMT as a core course in the past, but did not pass they can decide next year whether they would like to take the new core course (COR1006) or the old TCMT course (SCI1001) again to meet their core graduation requirements.
Next to this fundamental change, UCM has decided to strengthen the science concentration by adding a new science course called, **SCI2042 Infectious Diseases and Global Public Health**.
Also the skills trainings have been strengthened by the addition of **SKI2047 Gaining Racial Literacy**.
Furthermore, in the field of economics **SSC3034 International Economic Relations: The Case of Europe** has been added to the curriculum, and **SSC2010 Contending Perspectives in Economics: The Case of Inequality** will replace **SSC3057 Economics and Society.** Those of you who are interested in the content that was covered in SSC3057 Economics and Society, but did not have the chance to take it yet, should be aware that it is possible to request the SBE course EBC2153 History of Economic Thought (which covers very similar content) as external education.
Finally, UCM is happy to announce that all additions to the catalogue that have been announced last fall in the addendum of the course catalogue 2020-2021 will continue to be offered and haven been properly placed in the upcoming catalogue. These are: **PRO3005 Public Policy Evaluation & Analysis Project; SSC2071 Latin America: History, Politics, and Culture; SSC3060 Extractivism and (Under)development in Latin America; SSC3055 Chinese International Relations and Foreign Policy;** and **SSC3059 China and India in Global Governance**.

Changes in Periods, Levels, Concentrations and Names
Some courses have been moved from one period to another. This was mainly done to assure that these courses can continue to be offered, taking into account staff availablity. Please see the table below for an overview:

Period Change		
Name	*From*	*To*
HUM1007 Introduction to Philosophy	2	1
HUM2059 Computational Thinking for the Arts and Culture	1	2
SCI1001 Theory Construction and Modelling Techniques	1 & 4	4

Please note that **SSC1009 Introduction to European Integration** has been revised. In light of this revision the course has been elevated to an intermediate level and changed its name. It is now labelled **SSC2011 European Integration: History and Theory**. Despite its SSC label, the course can in either be declared as Social Science or Humanities course, depending on your individual curriculum planning.[1] Also, the revised version of the course will no longer be offered in period 1, but in period 2.

Furthermore, just as it is the case for SCI1001 Theory Construction and Modelling Techniques (as mentioned above), as of the academic year 2021-2022 it is possible to declare **SSC2025 Memory** either as a Social Science or as a Science course in your personal curriculum.[2]

Finally, what used to be called **SCI2034 Brain & Action** will be called **SCI2034 Functional Neuroanatomy** from next academic year onwards, and what used to be called **SSC2018 Advertisement: Marketing Communications of Brands** will be called **SSC2018 Brand Management and how to Communicate about Brands**

We hope this overview of the main changes will prove useful. For further details on all offered courses, please check the catalogue for the course descriptions. Please be aware that if you need information beyond what is offered in the catalogue, you can find all course manuals of previous editions of the courses on CANVAS on the 'Communication UCM' pages (in the modules section).

---

[1] Please be aware that you cannot take SSC2011 European Integration: History and Theory if you have already taken SSC1009 Introduction to European Integration, since the content of the courses overlaps. Similarly, but to a different effect it is not possible to label SSC1009 retroactively as a 2000 level or as a Humanities course in your curriculum planning matrix, since the assessment and part of the readers of SSC2011 have been adapted to ensure an optimal fit to the new level and the double concentration.

[2] Please note that declaring Memory as a Science course if you have taken it prior to the academic year 2021-2022 is not possible.

TABLE OF CONTENTS

Introduction

The UCM Course Catalogue 2021-2022 provides you with essential information about the courses offered at University College Maastricht during the 2021-2022 Academic Year.

Courses are listed with a course title and a course code. The course code refers to the part of the College program to which a course belongs and to the level of the course. Every course counts for 5 ECTS (European Credit Transfer System), except Skills, that are 2.5 ECTS each and the UCM Capstone which represents 10 ECTS. A full study load consists of 30 ECTS per semester and 60 ECTS per academic year.

Course code abbreviations

The course code consists of three letters and a four digit number.

These are the three letter abbreviations:

COR   Academic Core
HUM   Humanities
SCI   Sciences
SSC   Social Sciences
SKI   Skills
PRO   Project
CAP   Capstone
UGR   Undergraduate Research

The first digits of the four digit number in the course code indicate the level of a course:

1 = 1000-level introductory courses (open to all students)
2 = 2000-level intermediate courses (may have prerequisites)
3 = 3000-level advanced courses (do have prerequisites)

The four digit number of the course code refers to the course number.

Undergraduate Research / MaRBle (UGR), Undergraduate Research / The Documentary and Applied Research & Internship Project

Please note that UGR3001 Undergraduate Research / MaRBle, UGR3002 Undergraduate Research / The Documentary and UGR3003 Applied Research & Internship Project are only open to students that have been accepted into these courses.

Prerequisites and recommendations

A number of course descriptions include prerequisites or recommendations. Note that *prerequisites* are required courses: you must have passed these courses in order to be allowed to join a course. Courses that are *recommended* are not mandatory. They are suggested by the coordinator and may add to your performance in the course.

For several 2000-level courses within the Sciences, it is possible to request a waiver for the prerequisite 1000-level course if you have already taken relevant courses during your previous education. On the next page you will find an indicative checklist for the topics that you should have covered in order to receive such a waiver.

Checklists for secondary school mathematics and sciences

The checklists below summarize the topics expected to be covered at secondary school for those requesting waivers for several 2000-level science courses:

A) Mathematics (SCI-M)
B) Physics (SCI-P)
C) Chemistry (SCI-C)
D) Biology (SCI-B)

A) *SCI-M. Checklist for Mathematics*

Attitude towards mathematics: ability and willingness to think and reason at an abstract level

Elementary knowledge of calculus:
- reading equations
- solving simple equations
- analyzing functions
- functions and inequalities
- integers and polynomials
- rational numbers

Elementary knowledge of algebra:
- slopes and lines
- algebraic addition, subtraction, multiplication, and division
- solving algebraic equations
- exponents and powers
- linear systems
- factoring

Elementary knowledge of geometry:
- points and lines
- angles
- polygons and symmetry
- triangles
- perimeters and areas
- circles
- trigonometry, sinus, co sinus

B) *SCI-P. Checklist for Physics*

Elementary knowledge of electricity and magnetism:
- potential, current, resistance, capacitor, simple electrical circuits
- direct and alternating current, period, frequency
- electrical energy, heat production, kWh
- semiconductors, diodes
- AD-converter
- positive and negative charges, electrical field
- magnetic field and flux, Lorentz force
- electron tubes in oscilloscope, TV, and X-ray
- linear accelerators
- electromagnetic induction, electrical motor, dynamo, transformer

Elementary principles of mechanics:
- position, distance, speed, acceleration, speed as a tangent
- gravity, trajectories, falling time and final velocity of objects
- representation of forces as vectors, addition of vectors
- Newton's laws: inertia, momentum, force $F = m \cdot a$
- lever and pulley
- work, potential and kinetic energy
- rotation, centripetal acceleration, Newton's law of gravitation

Elementary principles of thermodynamics:
- pressure, volume and temperature, Boyle's law
- phase diagrams, (heat of) melting, evaporation, sublimation
- relation between atomic and macroscopic properties in gases
- equivalence of work and heat, specific heat
- first law of thermodynamics: conservation of energy

Elementary principles of waves and radiation:
- longitudinal and transversal waves, amplitude, wavelength, frequency
- harmonic oscillation
- radiation energy, dB
- sound waves, standing waves on a string and in a pipe, overtones
- resonance, Doppler effect
- optical waves, refraction, reflection, Snell's law, polarization
- light as electromagnetic radiation, velocity, color and frequency
- lenses and image formation, the eye, glasses, microscope
- double slit experiment, phase differences, interference, optical grids
- emission and adsorption spectrum
- radioactivity, isotopes, alpha-, beta and gamma-radiation

C) SCI-C. Checklist for Chemistry

Elementary knowledge of atomic and molecular structure:
- charge and mass of atomic nucleus, protons, neutrons, valence electrons
- classification of elements in the periodic table
- metals and non-metals, noble gases
- bonding: covalent, ionic, polar, van der Waals
- hydrophilic and hydrophobic substances, detergents
- understanding and naming of structural formulae

Elementary knowledge of organic chemistry:
- polymerization, structure and properties of synthetic polymers
- formation of natural fuels: coal, oil and gas
- total and partial oxidation: carbon dioxide and mono-oxide
- saturated and unsaturated hydrocarbons
- aromatics, ethers, alcohols, ketones, carbon acids, esters, amino acids
- stereo-isomers, optical activity, asymmetric carbon atom
- starch, cellulose, proteins, nucleic acids

Elementary knowledge of chemical reactions and analysis:
- reaction types: substitution, addition, esterification, hydrolysis
- weak and strong acid and bases, salts, buffers, pH
- redox reactions, batteries
- activation energy, reaction velocity
- law of mass action, chemical equilibrium, dissociation constant
- influence of temperature, pressure and the presence of catalysts
- concentration units, moles, molar volume of gases
- extraction, adsorption, distillation, filtration, centrifugation, sedimentation
- chromatography, spectrophotometry

D) SCI-B. Checklist for Biology

Elementary knowledge of the structure and function of:
- ecosystems, population, species, evolution, biodiversity
- competition, predation, symbiosis, biotic and a-biotic factors
- differences in animals, plants, fungi and bacteria
- organs, senses and tissues in animals and plants
- structure-function relations in movement, digestion, transport, procreation
- cells: nucleus, mitochondria, ribosomes, endoplasmic reticulum, Golgi-system
- cell membranes and receptors

Elementary knowledge of genetics and embryonic development:
- chromosomes, genes, genetic code, dominant and recessive alleles
- meiosis and mitosis
- DNA, nucleotides adenine, guanine, cytosine and thymine
- mRNA, tRNA, protein synthesis, replication, transcription, translation
- single- and double-stranded DNA, RNA viruses
- genotype, fenotype; influence of environment
- mutations, recombinant DNA technique, plasmids, cell fusion
- breeding, selection, genetic modification
- hereditary disorders, X-linked genes, prenatal diagnostics
- formation and transport of egg and sperm cells
- effects of hormones on menstrual cycle
- anti-conception, artificial insemination, in vitro fertilisation
- role of oviduct, uterus, placenta, umbilical cord

Elementary knowledge of energy cycle and metabolism:
- role of the sun as source of energy, biomass
- photosynthesis and plant metabolism
- breakdown of carbohydrates and fat to water and carbon dioxide
- aerobic and anaerobic metabolism, role of ATP
- role of proteins, enzymes, transporters, receptors
- proteins and formation of nitrogen containing substances
- role of digestive tract and nutrient transport by blood and lymph
- function of the heart, lung, kidney and liver in metabolism
- role of micro-organisms in the carbon and nitrogen cycles
- waste management, pollution, global warming, acid rain

Elementary knowledge of homeostasis:
- homeostatic control: detection, comparison, effectors
- role of the nervous system, action potential, neurotransmitters
- role of the endocrine system, hypothalamus, pituitary gland, hormones
- role of skin in regulation of body temperature
- role of immunological system in body defense, blood groups, vaccines

Core Courses (COR)

COR1002   Philosophy of Science

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	2 / 5	5	Core	No

Prerequisite
None.

Recommended
It is strongly recommended not to take this course in your first or second semester.

Objective
- To familiarize students with the philosophical foundations of the scientific method.

Description of the course
Typical issues in this course are: What is the role of observation in science? What is a scientific explanation? What roles do theories and experiments play in science? What is the nature of scientific progress? Can we rationally decide between scientific viewpoints? In what ways are the social sciences similar to or different from the natural sciences?

The course presents an introduction to major issues in the philosophy of science. It can be divided into four parts. In the first we will deal with traditional positions on the objectivity and methodology of science, like those of logical empiricism. The second focuses on objections to this received view as formulated by critical rationalism and by Thomas Kuhn's paradigm theory. Kuhn's theory revolutionized thinking about scientific knowledge and led to the so-called sociological and historical turn in the philosophy of science. The course then addresses two fundamental problems in the field: 'Do our theories describe reality?' (The problem of realism) and 'Do we now have better knowledge than in the past' (The problem of cognitive progress). In the final part of the course problems in the philosophy of the social sciences will take center stage: How do the social sciences explain and predict events? Does the method of understanding present an alternative methodology for social science? And finally: What is the role of social science in society.

Literature
- Chalmers, D. (1999). *What is This Thing Called Science?*
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
An essay and a test with open questions.

COR1003   Contemporary World History

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	1 / 4	5	Core	Yes

Prerequisite
None.

Objectives
- To provide students with an understanding of the main trends in politics, demography, society and culture over the last 70 years and to put these trends in a global context.
- To develop a critical attitude towards the use of historical theory, and the interpretation of historical data and processes.

Description of the course
The course intends to trace back current situations to their historical backgrounds. The first three tasks, under the caption "Toolkit", will therefore consist of a brief exploration of the philosophy of history and some issues regarding historical perspective, a discussion of the concepts of "state" versus 'nation' (in anticipation of issues regarding decolonization, specific regional conflicts, and possible sources of conflict in general that will be discussed in later tasks), and a discussion of the Cold War as an influential factor in recent history.

Each of the following tasks, under the captions of "Area surveys" and "Assessment of the current global situation" respectively, will be built around a case that represents the underlying problem, and both combined will lead students to specific source material. Examples of such cases are decolonization, the economic development of Asia, conflict in Africa, and the implications of the current position of the USA as "solitary superpower".

Literature
- Antony Best, Jussi M. Hanhimäki, Joseph A. Maiolo and Kirsten E. Schulze, International history of the twentieth century and beyond, Third edition, Routledge. 2015.
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
A final written exam, a paper and participation.

COR1004 Political Philosophy

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	2 / 5	5	Core	No

Prerequisite
None.

Objectives
- The course will provide an introduction to western political philosophy. Students will learn to analyse, discuss, and apply basic concepts in contemporary political philosophy such as justice, equality, liberty and community.
- Students will apply these core concepts to various local, national, and global political issues such as migration and global justice.
- Students will be trained in normative political argumentation. They will exercise their ability to debate contentious ethical issues of public life.

Description of the course
Politics is a complex and puzzling subject. If only taken at their word, it is difficult to understand why people act the way they do and believe the things they purport to believe in. As political philosophers we try to understand underlying conceptions and values that shape politics and which are used to justify concrete policies. We are not concerned with what people claim to believe, but rather with the underpinning structures, values and ideas that shape how it is that we live together. We are concerned with how the language and concepts that people use comes to define who they are. In other words, we don't have ideas, ideas have us. Our task in this course is to understand those ideas.

This course will provide an introduction to contemporary philosophical debates about core political concepts such as *justice, liberty, equality, community,* and *democracy* in modern liberal-democratic societies. Students will become familiar with the thought of some of the leading modern political philosophers, like Thomas Hobbes, Mary Wollstonecraft, John Rawls, Hannah Arendt, Isaiah Berlin, Frantz Fanon, Martha Nussbaum, Achille Mbembe. Since conceptual analysis is the core business of philosophy, students will learn to analyse concepts, to clarify fuzzy moral ideas, and to make explicit the tensions and contradictions inherent to our political lives. Students will learn how to apply these concepts to current political debate and practice.

Literature
- Various primary texts in political philosophy (these vary somewhat from period to period and year to year)

Instructional format
Tutorial group meetings, debates and lectures.

Examination
A midterm take-home paper; endterm take-home paper; two short written group assignments; class participation. NB. Assessment will depend on the mode of course delivery.

COR1006   Science, Reason and Human Progress

Semester	Period	ECTS	Concentration	Device free
Spring / Fall	1 / 4	5	Core	No

Prerequisite
None.

Recommended
The written (individual) assignment in this course is closely aligned with SKI1008 Introduction to
Academic Skills 1. Freshmen are recommended to take this course alongside SKI1008. This ensures that
students can get additional feedback on their individual written assignment for the current core course. The
same goes for students in COR1003 Contemporary World History.

Objectives
- Students learn to recognise, define, and analyse scientific and intellectual achievements grounded in
  enlightenment and describe their relation to human progress.
- Students learn to review scientific theory and thought, scientific jargon and its application in a critical
  manner.
- Students are encouraged to recognise and illustrate the interdisciplinary nature of successful scientific
  endeavour
- Students are trained to apply the scientific inquiry method. In addition, they practice cross- and
  interdisciplinary thought and use it to review and report solutions to a real-world issue

Description of the course
Science never stands still, and for some time now, there appears to be a growing shift in intellectual enquiry
and discovery toward more cross-disciplinary and interdisciplinary thinking. The core course Science, Reason
and Human Progress takes this observation as a starting point. In doing so, its ultimate goal is to make students
aware of the value of scientific inquiry across different academic domains and of its fundamental relevance to
societal developments. Such awareness can only be developed by first getting a basic understanding of 'how
scientific inquiry works'. To achieve this the course has three aims that are more specific. The first is to
introduce students to scientific thought, language and behaviour and their relation to human progress. In this
context, it will become clear that academic, scientific, and intellectual work interacts with political, social and
moral change, which in turn often starts with scientific inquiry. The second aim is to help students develop and
apply scientific inquiry skills. The third aim is teaching Liberal Arts & Science students to recognise how they can
become part of this change in scientific and human progress that scientific inquiry brings about and possibly
even lead it. In order to do so, throughout the course, emphasis lies on recognition of past, present and
(possible) future scientific works (theory and applications).

Literature
- Chapters/ textbook t.b.a.
- E-readers

Instructional format
Tutorial group meetings and lectures.

Examination
An individual scientific inquiry paper and an (group) paper (i.e. writing an interdisciplinary practise-focussed
work for a simulation client).

Humanities (HUM)

HUM1003 Cultural Studies I: Doing Cultural Studies

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	Yes

Prerequisite
None.

Objectives
- To introduce students to the foundational texts and formative debates that have shaped Cultural Studies as an academic field of inquiry.
- To familiarize students with key concepts, themes, and topical debates within contemporary Cultural Studies.
- To introduce students to some of the central theoretical approaches within Cultural Studies, including critical theory, semiotics, material culture studies, gender theory, and critical posthumanism.
- To provide students with the analytical skills to develop their own examination of cultural objects and processes.

Description of the course
Cultural Studies is a wide-ranging interdisciplinary inquiry into the ways in which contemporary culture, especially popular culture, operates and functions. It explores how cultural processes and artefacts are produced, distributed, and consumed, and traces the diverse ways in which people shape and transform culture particularly in relation to issues of identity, difference, and power. In contrast to more traditional approaches to culture, Cultural Studies focuses not merely on 'elevated' cultural objects such as 'great' works of art and literature, but also - and primarily - deals with more mundane cultural phenomena. Addressing topics that range from fashion advertisements to Instagram, and from science fiction to Lady Gaga, Cultural Studies zooms in on seemingly familiar, yet highly complex, practices of everyday life.

This course introduces you to the key thinkers, topics, and critical frameworks in Cultural Studies. It starts with some of the foundational texts and formative debates within the field, most notably the work of Theodor Adorno and Max Horkheimer, Walter Benjamin, and Stuart Hall, associated with the Frankfurt School and Birmingham School respectively. Subsequently, we will take a closer look at several topical debates and conceptual approaches within contemporary Cultural Studies. We will address themes such as consumer culture, advertising, and social networks; the power and politics of representation; material culture and identity; cultural performances of gender; and the transnational cultural flows of globalization. By reading the work of major theorists such as Zygmunt Bauman, Henry Giroux, and Joanna Zylinska, you will familiarize yourself with a variety of critical approaches to cultural theory. Lastly, by looking at the interrelated topics of posthumanism, art, and technoscience, the final tasks of the course will explore some of the most stirring debates within Cultural Studies today, setting out new directions for the future development of the field.

Literature
- E-reader. (Articles that are not included in the E-Reader will be made available for photocopying during the course).

Instructional format
Tutorial group meetings and lectures.

Examination
A take home exam and two short papers.

HUM1007 Introduction to Philosophy

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite
None.

Objective
- To teach students how to "think philosophically".

Description of the course
One of the greatest and most influential Ancient philosophers, Aristotle of Stageira (384-322 BC) once remarked, "Wonder is the beginning of philosophy". What he was referring to is our habit of asking fundamental questions about our every-day life, such as, "Suppose I am certain that I am right about something, what is that certainty based upon?"; "Suppose I am engaged in a discussion with someone (for example about some controversial matter), what can objectively guarantee the stringency of my argument?" Thinking about and discussing such questions will force us to reconsider the things we have always taken for granted. And ultimately they will lead us to more fundamental questions about the proper nature of Truth and Knowledge as such.

Assignments during the course include the following: the nature of philosophical enquiry, problems of knowledge and truth (including the understanding and evaluation of arguments), ethics.

- Blackburn, S. (2001). *Being Good.* Oxford: Oxford University Press.
- Horner, C., & Westacott, E. (2000). *Thinking through Philosophy. An Introduction.* Cambridge: Cambridge University Press.

Instructional format
Tutorial group meetings.

Examination
Papers and debate.

HUM1010 Common Foundations of Law in Europe

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
None.

Objectives
- To provide students with a better notion of law as a harmonising phenomenon in European culture.
- To provide students with a basic notion of similarities and differences in the approach to law in the various member states of the European Union (and the USA).
- To give students a better understanding of basic legal notions such as property, contract and delict.
- To provide students with a greater ability to evaluate the significance of the transfer of law making powers from the national to the European institutions.

Description of the course
What do Europeans have in common? Part of the answer to this question is: their law. Currently, approximately 50% of all new legislation in the member states of the European Union has a non-national, European origin. This international outlook of law in Europe is not a new phenomenon. Even when concentrating on the so-called 'national laws' of the various European nations, it must be admitted that these laws find a strong foundation in a non-national, truly European tradition. This tradition dates back to the Middle Ages. Since it is the conviction of the course coordinator that a true understanding of the growing importance of the European institutions and policies can only be achieved by understanding the common legal history of Europe, the present course concentrates on this shared (legal) past. In doing so, it takes as its focal point the *ius commune*, i.e. the common, scholarly European approach to the law that originated in the Middle Ages and that was strongly based on Roman Law. This medieval tradition forms the common ground on which the present national legal systems in Europe have developed. It has strongly contributed to the creation of the idea of a common European culture.

In a manner that is highly relevant for an audience of non-lawyers and lawyers alike, the course starts with discussing Roman Law. The so-called *Corpus Iuris Civilis* will be used as the point of departure since most of what we know about Roman Law derives from this compilation of legal materials that was made in the 6th century AD on the orders of the Byzantine emperor Justinian. The texts that this emperor included in his collection were the product of a thousand years of unbroken legal development. During this millennium, roughly from 500 BC to 550 AD, Rome expanded from a small city-state to a world empire. While Roman law was adapted to cope with the changing society, the idea was maintained that it was essentially the same law that had been part of the early Roman way of life.

The course will also concentrate on the different approach to the law that existed and still exists in Anglo-American jurisdictions. It will try to explain the legal differences today between continental Europe and the British Isles. Additionally, some elements of American legal history will be studied. In doing so, the many similarities that lie beneath the seemingly radically different outward appearance of law in Anglo-American jurisdictions will come to light. This exercise will demonstrate that Anglo-American law is not so different from continental European law as some writers would like us to believe.

The course will conclude with a study of a selection of similarities and differences that exist in today's European legal landscape.

Literature
- O.F. Robinson, T.D. Fergus, W.M. Gordon, *European Legal History*, London etc., 2000 or later edition.
- Additional materials, to be announced during the course.

Instructional format
Tutorial group meetings.

Examination
A written paper and class presentations.

HUM1011 Introduction to Art; Representations, Performances and Interactions

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite

None.

Objectives
- To provide students with an advanced introduction to the visual and performing arts.
- To broaden the students' theoretical understanding of art.

Description of the course

The traditional term for the many ways in which artworks represent reality is mimesis. The mimetic talent for imitation and representation has been the subject of admiration, study and debate throughout the history of Western art. The notion of mimesis is employed to describe painting, literature, music, theater, dance, and more; it is still used to characterize the domain of the arts in general.

In engaging with the concept of mimesis, this course focuses on three central themes and approaches. The first part of the course is concerned with representations of reality in nineteenth and early twentieth century literature, painting, and music. The second part deals with modern and contemporary performance art. The academic field of Performance Studies is introduced in an attempt at dealing with the blurring of genres, cultures and conventions that are typical for contemporary art shaped by mass media and processes of globalization. The third and last part of the course discusses sociological perspectives on art as a social practice and a collective activity.

This course, through its emphasis on representations, performances and interactions, constitutes a basis for courses on the arts in all their diversity, as well as courses on culture and cultural studies in general. The course includes a practical, creative exercise on the role of style in representation.

Literature
- Auerbach, E. (2003[1953]). Mimesis: *The Representation of Reality in Western Literature*. Fiftieth-anniversary edition with a new introduction by Edward Said. Princeton University Press, Princeton.
- Gombrich, E. (2000). *Art and Illusion. A Study in the Psychology of Pictorial Representation*. Princeton University Press, Princeton
- Schechner, R. (2020). *Performance Studies: An Introduction*. 4th ed. Routledge, London
- Becker, H. S. (1984). *Art Worlds*. University of California Press, Berkeley.

Instructional format

Tutorial group meetings, lectures, practice-based exercise.

Examination

A practice-based exercise on the role of style in representation during the first half of the course and a final take home exam.

HUM1012 Pop Songs and Poetry: Theory and Analysis

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite
None.

Objectives

By the end of this course
- You have a basic understanding of the literary theory of poetry analysis.
- You are able to apply this theory to both poems as song texts.
- You are able to analyze songs and poems in a sophisticated way, and to discuss lyrical texts and songs systematically.
- You are able to integrate gender and other axes of difference into the study of poems and popular songs.
- You are able to express your analysis of poems and songs in academic writing.
- You are familiar with a number of classic Anglo-American poems.
- You know at least one poem or song by heart, and know how to recite/sing it.
- You have written a poem or song, thereby experiencing the creative process that is involved firsthand.

Description of the course
In the course *Poetry and Pop Songs*, we will be reading English and American poetry from the 20th and 21th century. We will also unravel the work from a variety of older and newer music artists, ranging for example from U2 and Coldplay to Rihanna and P!nk. Moreover, you are encouraged to look for additional examples of poems and songs to discuss and analyze in class.

In this course, you will learn how to interpret poetry and popular music in a systematic and sophisticated way, and to write an in-depth analysis of a song or poem. The focus rests with the analysis of the lyrics or 'text' of the poems and songs. First, you will learn how to make use of insights and tools from literary theory in order to find out how (specific) poems work, which effects they evoke, and what they mean. You will also learn how to apply these tools to the analysis of song texts.

In this course, we use a broad definition of pop songs, focusing on contemporary popular music, which means including other genres than just conventional pop music, such as rap, hip-hop, and rock. We will also pay some (albeit limited) attention to musical aspects - such as rhythm - of the songs at hand, to see how they interact with the lyrics. Once you have become familiar with the analysis of the lyrics, we will expand our focus to include an analysis of performance (including music videos) in the last week of the course.

In this course, you will also experience the creative process that underlies all poetry and song, in a variety of ways:
- you will learn to recite or sing a poem or song;
- you will hear from experienced artists how they approach writing a poem or song;
- you will write a poem or a song of your own.

Throughout the course, we will pay close attention to issues of gender and diversity. We will address the question of how gender, ethnicity and sexuality can be integrated into an analysis of the lyric.

Literature
- Primary sources (poems and songs)
- Vendler, H. (2009). *Poems, Poets, Poetry: An Introduction and Anthology*. (3nd ed.). Boston: Bedford/St. Martin's.
- E-Reader.

Instructional format
Tutorial group meetings and lectures.

Examination
Writing a poem or pop song (pass or fail), performing a poem or song (pass or fail), presentation of plans for the final paper (pass or fail), and a final paper (70%).

HUM1013 The Idea of Europe: The Intellectual History of Europe

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	Yes

Prerequisite
None.

Objectives
- To provide students with an overview of the concept of Europe and the development of European identity.
- To highlight the specific characteristics of European political/social/cultural history, notably in comparison with that of other (non-European) societies, that contributed to a sense of European community and the European identity.
- To demonstrate how a sense of community could evolve from the many shared historical cultural factors.
- To provide students with an introduction to a range of theories which are fundamental to a range of courses at UCM.

Description of the course
This course deals with some of the most fundamental questions concerning the development of the European Identity. What have been the decisive common experiences that have fostered a sense of European community and identity, and how have they evolved over time? Tracing those events and experiences in the past that have helped to shape some sense of European community and identity means establishing the factors that have contributed to the difference between Europe and the non-European world. The concept of identity logically consists of two components: the notion of historical continuity and a marked sense of difference between the "in-group" and one or more significant others. If we accept that there is some sort of European identity, albeit complex and multifaceted, we should ask which factors have generated it. To put it more specifically: Which factors contributed to Europe's Sonderweg in world history? Or, to use the words of one author, the historian E.L. Jones: how did "the European miracle" come about?

From the angle of world history, the European experience constitutes a major deviation from an almost universal pattern of social and political organization. Europe is the first region in the world that has changed into a large-scale industrial and urban society. This so called process of modernization has turned European civilization into something of a historical anomaly - the kind of anomaly, however, that forced itself on other continents, thus becoming a new kind of standard in the end after all. To ask for the factors that have contributed to the modern sense of European community and identity is, at least for a large part, to ask for the factors that have produced this phenomenon of modernization, including the blatant economic disparities between European civilization (including North-America) and the rest of the world.

Literature
- Rietbergen, P.J. (1998). *Europe: a Cultural History*. London/New York: Routledge.
- Delanty, G.D. (1995). *Inventing Europe; Idea, Identity and Reality*. Macmillan Press, Basingstoke.

Instructional format
Tutorial group meetings and lectures.

Examination
An exam with essay questions and a written paper.

HUM1014 Great Novels 1850 - Present

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite

None.

Objectives

By the end of this course:

- You are acquainted with a number of key novels from the western tradition.
- You have a basic understanding of periodization in literary history.
- You know the basic concepts in literary theory.
- You are able to apply theoretical concepts in analysing a novel.
- You can formulate a research question as a starting point for a literary analysis
- You have mastered the basics of writing effectively and academically about literature.

Description of the course

In this course, you will read four key novels by British, French, and American authors. The reading and discussion of the primary works is the main objective for this course. Besides that, the course will introduce you into the scholarly analysis of literary works. It will acquaint you with major developments in the history of Western literature since 1850, and provide you with a vocabulary/toolkit to discuss and analyze novels. You will gain experience in reading, analyzing and writing about novels.

However, what exactly is a novel - Virginia Woolf described it as 'the most pliable of forms'? As its name testifies, the novel was a 'new' genre. For centuries, the body of work referred to as 'literature' would first entail drama and poetry, but in the course of the nineteenth century, the novel took flight. Why did it become such a dominant genre? Some have argued that the novel was so successful because it became the medium of the middle class, and the vehicle of its emancipation. To be sure, the novel helped shaping ideas about modern society, about what an individual is or can be, about self and other, about love, sex, marriage and property. Nevertheless, even if all those functions can be attributed to the 19th century novel, can the same be said about the 20th century novel? How did the novel as a genre change over time? This course will address these and other questions, primarily by reading novels from the Western tradition from 1850 onwards.

Literature

- 4 novels:
  - Flaubert, G. (1857). *Madame Bovary*.
  - Woolf, V. (1925). *Mrs Dalloway*.
  - Fitzgerald, F.S. (1925). *The great Gatsby*.
  - Cunningham, M. (1998). *The Hours*.
- Bennett, A. & Royle,N. (2009). *An Introduction to Literature, Criticism and Theory*. Routledge, 3rd , 4th or 5th ed.
- E-reader

Instructional format

Tutorial group meetings and (guest) lectures.

Examination

Group or individual podcast presentation (30%) and a final paper (70%).

HUM2003 The Making of Crucial Differences: 'Race', Sexuality, Gender, and Class in Historical Perspective

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite

Interest in historical research, gender studies and critical theoretical reflection.

Objectives

- To acquaint students with a critical perspective on modern, mostly European history and the 'dialectic of Enlightenment', that means to show how the achievements of Enlightened ideals etc. were intertwined with colonialism, the 'Jewish question', gender and class inequalities.
- To familiarize students with a historical perspective and historical knowledge on the production and impact of configurations of 'race', class, gender and sexuality from the Enlightenment until the Shoa/Holocaust.
- To introduce students to canonical philosophical, theoretical texts on 'race' and 'gender', 'anti-Semitism' and 'orientalism', and to major texts in the field of historical gender and diversity studies like Foucault's "History of Sexuality".
- To acquaint students with the way in which these configurations like gender, race and religion have structured cultural scripts and practices, stereotypes, individual identities, and European and North American developments, like slavery.
- To introduce students into the (critical) role literature can play within the dynamics of social change and cultural discourse.
- To provide students with the analytical skills to examine the dynamics of the production and reproduction of identity and difference, inclusion and exclusion, equality and inequality.

Description of the course

Starting from recent debates and problems like new nationalism, misogyny, political homophobia, Islamophobia and antisemitism the course offers a historical inquiry into the construction and development of cultural 'differences' marked through categories like gender, sexuality, class, 'race', and religion from the eighteenth century until the Holocaust. Through historical case studies, philosophy and literature it looks at the way in which Western identity-discourse and its colonial subcode have formed dichotomies like self and other, black and white, the Orient and the West, male and female, worker and bourgeois, hetero- and homosexual, and how these differences became social inequalities. The course introduces gender as a category of historical analysis. Through a critical inquiry it will reconstruct the paradoxes of a 'dialectic of Enlightenment' (Adorno), that means the dark side behind its claim for reason, equality, brotherhood and freedom.

It aims to trace and illustrate the ways in which the Enlightenment has provided a rationale to mark gendered, classed and racialized boundaries in science which, more often than not, resulted in inequalities. These inequalities became embedded in European society in such a way that the active, dominant subject came to be seen as 'white, male, and middle class.'

This discourse of dominance helped to carry out European colonialism and the imperial project. With the help of a literary analysis (Joseph Conrad "Heart of Darkness"), the course introduces into the (critical) role literature can play within the dynamics of social change and cultural discourse.

Furthermore, the course will introduce into critical theories, like discourse analysis and the history of knowledge, postcolonial and gender/sexualitiy studies and studies on Orientalism (Said). Thus, it will examine the dynamic processes of the "history of sexualities", their formation and contradictions, which emerged out of these processes. It will reconstruct how 'masculinity' and the 'image of man' (Mosse) became a central trope of nationalism and colonialism. Last but not least, it will ask how colonial and anti-Semitic discourse, stereotypes of the 'external Other' (in the colonies) and stereotypes of an 'internal European Other' (the Jews etc.) were intertwined and how we can better understand the Holocaust from a historical, multidirectional perspective.

Disciplinary perspectives

Gender and Postcolonial Studies, History, Philosophy, Literary Studies, Cultural Studies, Sociology.

Literature

- E-reader and the novel "Heart of Darkness" (Joseph Conrad).

Instructional format

Tutorial group meetings and lectures.

Examination

Oral presentations and final research essay.

HUM2005   Enlightenment and Romanticism

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite
None.

Objectives
- To provide students with a historical and philosophical introduction to Enlightenment and Romanticism.
- To understand these periods as opposed worldviews in social, philosophical, scientific and political perspective.
- To learn how much our life and culture is structured by enlightened and romantic views and values; our obsession with authenticity, nationalism, our attitude to science and technology, belief in democracy, our emotional life, personal relationships like love and friendship, the importance of Nature, universal human (and animal) rights, etc.

Description of the course
The debate between Enlightenment and Romanticism has an enduring impact on discussions of today in art, politics, science, human identity and social values. We can hardly understand the Western world without knowledge of these two decisive periods. This course is a systematical introduction to these two, formative, opposed intellectual traditions.

First, a historical context will be presented to the political and ideological ambitions of the Enlightenment (enlightened despotism, Voltaire at the court of Frederick the Great, censorship and the diffusion of the Enlightenment).

Secondly the opposed approach to 'Nature' will be introduced; the influence of Newton, the rise of modern science, the Encyclopédie vs. Romantic science (e.g. Goethe's criticism on Newton's Theory of Colour) and the role of the arts in the new approach to Nature (such as landscape painting and romantic poetry). Then, the changes in the visual arts will illustrate continuity and discontinuity in cultural history (Romanticism and Neo-Classicism).

In the fourth place human subjectivity in the Enlightenment (based on Lockean psychology and Self-love) will be confronted to new approaches to the romantic soul (the unconsciousness, irrationality, Weltschmerz). This will also be discussed with an analysis of the classic movie *Dangerous Liaisons* (Stephen Frears, 1988).

Finally, discussions about morals and politics will be presented (Rousseau, the Social Contract, the slogans of the French Revolution vs. Romantic values concerning the State and personal relationships like love and friendship, nationalism).

Literature
- Dorinda Outram, *The Enlightenment*. Cambridge University Press, Cambridge/New York 2011.
- Isaiah Berlin, *The Roots of Romanticism* (ed. Henry Hardy). Princeton university Press, Princeton / Oxford 1999/2013.

Instructional format
Tutorial group meetings and 2 lectures, 1 film (Stephen Frears, *Dangerous Liaisons*).

Examination
A midterm essay about the film and a test with open questions at the end of the course.

HUM2007 States and Nations in Europe, from the Middle Ages to the First World War

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities & Social Sciences	No

Prerequisite

HUM1013 The Idea of Europe: The Intellectual History of Europe or any other 1000-level Humanities course.

Objectives

- To examine nation-building and nationalism in early-modern and modern Europe.
- To discuss the development of "the state" as well as the diversity in state- and nation-building since the Middle Ages.
- To introduce the students to the history of international relations since the fifteenth century until 1919.

Description of the course

The states and nations as we know them today have not always been around. In fact, they are both products of history, which emerged as a result of specific circumstances. This course analyses the emergence and development of state, nation and nationalism in Europe since the Middle Ages.

In addition, it introduces the students to the development of international relations and diplomacy from the High Middle Ages until the year 1919. As the course proceeds chronologically from the Middle Ages to the twentieth century, it provides the students with an overview of European political history.

Literature

- E-reader.

Instructional format

Tutorial group meetings and lectures.

Examination

One essay, individual presentations and a test with open questions.

HUM2008 Introduction to Ancient Philosophy

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	No

Prerequisites
None.

Recommended
HUM1007 Introduction to Philosophy.

Objectives
- To provide you with a basic introduction to ancient Greek philosophy;
- To help you explore the meaning of philosophical texts by situating them in their historical contexts;
- To help you find out how our culture, and we as part of it, have been shaped by these ancient thinkers.

Description of the course
Why would anyone choose to study philosophers who lived and wrote more than two millennia ago? One obvious answer is: to learn about one's roots; to better understand Western culture and heritage. Up to this day, the ancient Greeks constitute a major influence on our ideas about critical thinking, about the fundamental character of reality, about science, ethics, and art, and last not least: about what it is to be human and about what it means for humans to flourish, to live truly good lives. Ancient philosophy provides an inexhaustible source of inspiration for contemporary philosophy. "The European philosophical tradition", the philosopher Whitehead once remarked, "consists in a series of footnotes to Plato". Slightly overstated, but not untrue.
In this course we will return to the sources and study the texts that helped us become who we are today. We will analyze a range of canonical philosophical texts from Antiquity, ranging from the Ionian Philosophers of Nature to Aristotle, and beyond. Although we will attempt to position these treatises in their historical and geographic contexts, our main concern will be: what do these ancient thinkers still have to say to us today? Please note: even if you have some prior knowledge of ancient Greek philosophy, that doesn't make this an easy course. Only choose this course if you are genuinely interested in reading intellectually challenging texts that do not always yield their secrets easily.

Literature
Required
- Copleston, F. C. (2017). *A History of Philosophy* (10ᵗʰ ed.). Vol. I: Greece and Rome: From the Pre-Socratics to Plotinus (rev. ed.). London / New York City, NY: Continuum.
- Guthrie, W.K.C. (62013 [1950]). *The Greek Philosophers from Thales to Aristotle.* Abingdon and New York, NY: Routledge Classics. (ISBN: 978-0-415-52228-1)

- Reeve, C.D.C. and P. Lee Miller (eds.) (2006). *Introductory readings in Ancient Greek and Roman Philosophy*. Indianapolis / Cambridge: Hackett.

Instructional format
Tutorial group meetings as well as lectures.

Examination
A mid-term paper in the fifth week and a plenary exam at the end of the course.

HUM2013 The Presence of Art: Reinterpreting Modern and Contemporary Art

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite

Interest in art theory and critical theoretical reflection.
At least one Humanities course should have been completed.

Recommended

HUM1011 Introduction to Art; Representations, Performances and Interactions or HUM1003 Cultural Studies I: Doing Cultural Studies.

Objectives

- To study historical and theoretical approaches to modern and contemporary art.
- To enable critical reflection and debate on the meaning and relevance of artistic practices.
- To learn how to write an art review.

Description of the course

Since the late 19th century and certainly up until the mid-20th century artists have issued avant-garde manifestoes of change, claiming their art to be ahead of the times. Critical of conventions and traditions, they regarded art as a revolutionary means to social, political, cultural, and intellectual emancipation and progress. Through what has been called the "shock of the new," by making tabula rasa with the existing, art was to create a better world. Were it not for the fact that art effectively served the ideologies of both the socialist and fascist totalitarianisms of the last century, such radical ambitions might even sound a bit naïve, nowadays. Indeed, as yesterday's future has become today's past, the utopias of a bygone era seem to have been disappointed, at last - or have they not? Do we need to rescue avant-garde virtues and ideals for the sake of the relevance of contemporary art? What precisely is the legacy of the modern avant-garde besides its success on the global art market? In the early 21st century and under the spell of a "new spirit of capitalism", is there any hope left for effective artistic critique? Or do current "economies of enrichment" simply reduce the value of art to financial speculation?

This course considers histories and theories of modern and contemporary art. It provides an overview of the heterogeneous and experimental development of modern and contemporary art. Artistic responses to society, politics, science, and technology are discussed. The module emphasizes the practices governing institutions of the contemporary art world, such as art markets and museums. Furthermore, the course features excursions to local art institutions in Maastricht, including the Bonnefantenmuseum.

Instructional format

Tutorial group meetings, guest lectures and field excursions.

Examination

An art review and a final take home exam.

HUM2014 Philosophers of the 20th Century

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
HUM1007 Introduction to Philosophy

Objective
- To introduce students to influential philosophers of twentieth century philosophy.

Description of the course
The course reconstructs the main ideas of some of the most influential philosophers of the 20th century: Ludwig Wittgenstein (1889-1951), Martin Heidegger (1889-1976), Hannah Arendt (1906-1975), Michel Foucault (1926-1984), Jacques Derrida (1930-2004) and Jürgen Habermas (1929). Their ideas are partially the result of the practical turn within philosophy initiated in the 19th century by Karl Marx (1818-1883), Søren Kierkegaard (1813-1855), Friedrich Nietzsche (1844-1900) and Charles Sanders Pierce (1839-1914). So, elaborating on their work during the past century many philosophers took practical issues as the starting point of their philosophy. This course tries to figure out what these practical issues are and how they are related to their theoretical ideas. Moreover, the course addresses the link between the work of these philosophers and the societal context and discusses its heuristic value.

Literature
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
An outline and a paper that addresses a controversy within the philosophy of the 20th century.

HUM2016 Heritage Studies: Preserving Our Natural and Cultural Pasts (and Futures)

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities & Social Sciences	No

Prerequisite
None.

Recommended
One of the following courses: HUM1011 Introduction to Art: Representations, Performances and Interactions; SSC1029 Sociological Perspectives, HUM2046 Living in a Technological Culture: Introduction to Science and Technology Studies.

Objective
- To introduce histories and theories of heritage preservation
- To critically analyze heritage practices
- To relate heritage studies to current issues

Description of the course
Heritage is often thought of as a material reality to be preserved – pristine landscapes or monumental architecture, for instance. However, in this course we do not exclusively approach heritage as material culture cast in monumental form, or as isolated ecosystems to be protected in reserves. Instead, we approach heritage as human practices of values, such as authenticity, integrity, or sustainability. A premise of the course is that heritage, whether tangible or intangible, always denotes the creation and recreation of a range of political, technological and ethical relations and meanings regarding the past, present and future. In other words, heritage is something that is done. In this course, we ask who does what, how and why? We will inquire into the histories, theories and practices of natural and cultural heritage preservation, learn about relevant national legislations and international conventions, and consider the emergence of new economies around heritage valorizations. We will encounter authoritative governmental and non-governmental heritage institutions and meet experts and managers of heritage in their fields.

Critically analyzing the ways heritage values are constructed and legitimized, the course situates contemporary heritage practices in global heritage assemblages: groupings of administrative apparatuses, technical infrastructures and value regimes that revolve around contested notions of heritage and that may transcend the nation state. *The Past is a Foreign Country*, as the title of one of the founding texts of the field of critical heritage studies from the 1980's goes. But, where on earth shall we look for "the past" in our anthropocentric 21st century, if anywhere at all? Is there a place for nostalgia in current times of global humanitarian and ecological crises, marked by simultaneous yet conflicting appeals to development and conservation? How can we do justice to the diversity of our pasts, while preserving possible heritage futures, today?

Literature
- Meskell, L. (2015). Global Heritage: A reader. Wiley, London
- Academic articles and book chapters
- Policy documents

Instructional format
Lectures, tutorial group meetings and site visits

Examination
A mid-term group presentation of an assigned case study and a final paper about a topic of choice.

HUM2018 Cultural Diversity in a Globalizing World

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite
At least one Humanities course.

Recommended
HUM1003 Cultural Studies I, HUM2031 Cultural Studies II or SSC2046 Globalization and Inequality.

Objective
- To teach students to reflect upon issues of globalization and cultural diversity from several disciplinary perspectives and connect these issues with their major field of academic study.

Description of the course
What is cultural diversity; when and where does cultural diversity become salient? This course focuses on cultural difference and 'identity' in an era in which the nation seems to lose its unifying significance in matters of personal identity and group identity formation. It seeks to analyze how globalization influences identity and culture and the ways in which these interact with social differences such as gender, ethnicity, religion and nationality. Its orientation is both practical and theoretical. Students will become acquainted with different theories of globalization and culture such as Hybridization (Nederveen Pieterse), McDonaldization (Ritzer), and the Clash of Civilizations (Huntington), concepts such as Orientalism (Said), Occidentalism (Margalit and Buruma), and Multiculturalism. Throughout the course theoretical discussions are linked to actual and pressing debates, such as feminist dilemmas on veiling, national/religious/ethnic identity formation, migration and technology.
Themes: Cultural Diversity; Gender and Ethnicity; National Identity; Multiculturalism; Orientalism; Occidentalism; Migration; Digital Technology
Disciplinary perspectives: Cultural Studies, Migration Studies, Gender and Diversity Studies, Sociology.

Literature
- E-reader.

Instructional format
Tutorial group meetings and six lectures.

Examination
Projects/Mid-term exam (group presentation) and a final exam (research paper-take home exam).

HUM2021 Medieval Civilization

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite
HUM2008 Introduction to Ancient Philosophy.

Objectives
The course aims to provide insight into European intellectual history in the Middle Ages, against the background of a changing world after the Fall of the Roman Empire. The focus will be on the Latin West. The course aims to provide a critical approach to a selection of medieval topics, including
- The development of education in the Middle Ages.
- The position and influence of Christianity in the Middle Ages.
- Philosophy in the Middle Ages.
- Literary works of the Middle Ages.
- Science in the Middle Ages.
- Magic and witchcraft in the Middle Ages.

Description of the course
For many of us, even medievalists, the Middle Ages are still somewhat of a mystery. On the one hand we tend to identify the Middle Ages with a dark period in history, which does not have a lot to offer us culturally or intellectually. Yet we are also fascinated by this period, and quite enjoy many of the artefacts that have been handed down to us.

In this course we will try to unravel some of the mysteries of the Middle Ages. We will try to understand how and why this period has become such a source of bewilderment: we shall pay attention to 'typically medieval' phenomena, but also look at the reception of the Middle Ages in retrospect. We will critically evaluate the presuppositions about the Middle Ages and show the continuity of intellectual developments in Antiquity, the Middle Ages and the present.

- Edward Grant, *The Foundations of Modern Science in the Middle Ages: Their religious, institutional and intellectual contexts* (Cambridge: Cambridge University Press, 1996).

Instructional format
Tutorial group meetings and lectures.

Examination
Participation and academic paper.

HUM2022 Digital Media: Digitalization, Digital Cultures and User Practices

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
None.

Objective
The aims of this course are to familiarize students with topics relevant for digital culture and society such as:
- Introduction to the field of digital media from the perspective of humanities and qualitative social sciences
- Introduction to transformations we experience with respect to the use of media and technology (e.g., net activism, self-tracking, gamification, AI and robotics but also digital literature and art)
- Overview of different media platforms and user practices
- The relation between technological development, techno-moral change and user practices as e.g., blockchain, self-tracking, AI and robotics).
- Relevant topics related to digitalization as e.g., ethics, surveillance and privacy will be discussed.

Description of the course
      Digitalization has a profound impact on our society. We can observe changes in different areas. What digital media do, what they look like, and how they relate to each other and to older media is not identical worldwide, but dependent on local practices as well. Transformations are not unequivocal. On the one hand, new genres have emerged, such as streaming channels, providing engaging forms of entertainment and learning but also provoking vehement discussions about their impact. New possibilities as e.g., participation in our digital cultures arise but also new inequalities, as the access and competencies needed for participation are not evenly distributed and the platforms that allow for participation also harbor new mechanisms of control and surveillance. The pace and diversity of these developments ask for continuous investigation and reflection. This development has gained a new impetus through 13the proliferation and popularity of social media but also the discourses around the Blockchain recently.

      The aim of this course is to investigate the consequences of these developments for society and culture. These consequences have been differently evaluated. The optimistic account stresses the new media's inherent possibilities for active cultural and social participation and digital citizenship beyond the reach of existing political or commercial institutions. Authors (e.g., Marres, 2017; Fuchs, 2014; Jordan, 2015) acknowledge that participation is not evenly distributed they also see the democratic possibilities of participation culture, stressing its empowering potential.

      At the same time, these authors share a less optimistic view and approach those changes more critically. There are still huge differences when it comes to access to digital media, which reinforces existing inequalities related to class, race, gender, age, and geographical location. Moreover, among those who have access there is a participation gap between people with different degrees of mastery of the cultural protocols and practices of the media involved, differentiating between the so-called interacting those who are able to select their multidirectional circuits of communication – and the interacted – those who are provided with a restricted number of pre-packaged choices (Castells, 2000 [1996], p. 402). Others emphasize that 'interaction' or 'participation' not necessarily means power-sharing or taking control. Rather than being potentially subversive, participatory practices contribute to more fluid assimilation of users into the online economy and the penetration of everyday private and social life by the logic and power relations of capitalism. The critical angle of participation is compromised: precisely because of the interactivity, diversification, and flexibility of the new media, the networked integration of multiple communication modes enhances the absorption of all forms of cultural expression into the same symbolic environment in which the distinctions between different types of contents and codes are blurred and adapted to a pervasive cultural logic in which entertainment value is predominant. Moreover, previously bottom-up developed platforms are increasingly incorporated by existing media and information companies and provide profitable resources – in the form of user data – for online businesses (van Dijck, 2013, Jordan, 2015). The recent development of Blockchain technology is ingrained into a libertarian ideology with the goal to give power and control back to the people. The discourse surrounding the Blockchain is again one of liberation and participation. The course will finish with a discussion of ethical questions related to techno-moral changes in our digital cultures.
This course is labelled as a humanities course, but the discussion will include literature from qualitative social science research as well.

Literature
- E-reader.
- Online sources.

Instructional format

Tutorial group meetings and lectures, viewing of 2 movies.

Examination

Short presentation in class (30%), and a final essay of 3000 (+/- 10%) words at the end of the course (70%).

HUM2030 Media and Technology; Philosophical Perspectives

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	No

Prerequisite
At least one 2000-level Humanities course.

Objectives
- To introduce students to a number of central themes in the philosophy of media and technology.
- To investigate what is at stake in different philosophical methodologies and approaches to media and technology.

Description of the course
Discussions about the changes media and technology bring to culture, and whether these are to be judged good or bad, are as old as philosophy itself. Examining the ideas of Plato, Kierkegaard, and Marx we will see how these debates have evolved over the centuries. With the development and spread of media and technology in the 20th and 21st century, debates about the relationship between the social and the technical have intensified and so it has become necessary to consider a variety of approaches to this relationship.

In this course, we will concentrate on a number of philosophical approaches that help us understand the relationship between media and technology and our lived exeperience. We will discuss media theory (McLuhan, Innis, Kittler) and discuss whether specific technologies and media, like writing and print, provoke structural changes in patterns of thought, action and experience. We will also deal with the critical philosophies of technology in the Marxist tradition (Marcuse; Feenberg), the hermeneutic tradition (Heidegger; Ihde) and the feminist tradition (Cockburn) as well as contemporary debates about speed, ethics, labour, and non-Western ideas about technology. These topics encourage us to think about how, to paraphrase the historian Melvin Kranzberg, media and technology are neither good nor bad nor are they neutral. Across these philosophical approaches we will also consider a variety of different media and technical artifacts, including AI,health care technologies, files, the alphabet, and education.

Literature
- Readers in Reading Room.
- Books in Reading Room
- Online sources

Instructional format
Tutorial group meetings and lectures.

Examination
Take-home tasks during the course and a final research paper.

HUM2031 Cultural Studies II: Visual Cultures

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	No

Prerequisite
At least one Humanities course.

Objectives
- To understand the way in which visual culture is conceptualized in relation to its disciplinary, historical, and theoretical context.
- To evaluate the strengths and weaknesses of different theories of visual culture.
- To select the appropriate theory(ies) and methodological tool(s) for analysis that best suits the material and argument.
- To communicate the way in which different approaches to visual culture mobilize disciplinary points of view using specialized terms.
- To demonstrate awareness of the larger social, political, and sexual issues involved in the academic study of visual culture as it relates to the body/subjectivity.
- To recognize the interdisciplinary nature of visual culture in its historical and contemporary overlap with scientific, artistic, and economic imaginaries.

Description of the course
This course will explore the variety of visual cultures and the theoretical insights garnered by the study of this interdisciplinary field. Straddling cultural studies, art history, museum studies, media studies, performance studies, literary studies, and science and technology studies, the field of visual culture at its most expansive combines theories and methods from across the academy. We will investigate visual cultures from these exciting and challenging (inter)disciplinary perspectives.

The course presents visual culture as a ubiquitous facet of modern life that perhaps more than any other component shapes and informs our understanding of self, society, and the world. Hence, it demands our careful attention and critical parsing of its workings at all levels of daily life. Our foray into the field will include examining the benefits of this inclusive mode of analysis, for instance in the range of objects available for study, as well as the drawbacks, particularly in terms of methodological rigor and the overinvestment in ocularcentric forms of knowledge. The student will be invited to scrutinize their disciplinary assumptions, to develop their toolbox of concepts, and to analyse visual objects that are rarely considered inside the university.

Starting with an introduction to visual culture, we'll investigate the terms vision, visuality, and image in conjunction with varying conceptualizations of culture. Each subsequent unit will deal with a "site" of visual culture that offers an object of study, a theoretical problem, and an interdisciplinary opportunity. We will study visual cultures from high to low, and examine how these forms are quickly transforming and breaking barriers of category and genre. The principle sites of inquiry traverse fashion, gaming, museum exhibitions, medical imaging, comics, and cinema.

Literature
- Various articles and chapters from the field of Visual and Cultural Studies, for instance out of the following books:
- Jones, A. (Ed.). (2003). *The Feminism and Visual Culture Reader*. London: Routledge.
- Sturken, M. & Cartwright, L. (2009). *Practices of Looking: An Introduction to Visual Culture.* Oxford: Oxford University Press.
- Rose, G. (2013). *Visual Methodologies: An Introduction to Researching with Visual Materials.* London: Sage Publishers.

Instructional format
Tutorial group meetings and lectures.

Examination
A group presentation and an analytical essay.

HUM2044 Philosophy of Language

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisites
HUM1007 Introduction to Philosophy and SKI3002 Argumentation II.

Objective
- To introduce students to the history of philosophical thought concerning language, including the implications of several important theories about language for how we think about *knowledge* and the possibility of making *judgements*.

Description of the course
The philosophy of language is concerned with the role that language plays in thinking, or more specifically: knowing. As such it is closely related to epistemology and philosophic theories on truth. But ultimately, the role of language also turns out to be essential when we make the transition from judgements about the world to moral judgements, i.e. judgements that express how we should act within that world. In this course we will show you how the study of language has been at the focus of interest of philosophers throughout the history of philosophy, and that the way in which the function of language is interpreted, is intimately connected with a philosopher's world view in general. We shall specifically pay attention to the philosophers Frege, Russell and Wittgenstein, but shall also touch upon the works of a variety of other philosophers, such as William of Ockham, David Hume and Immanuel Kant. We shall explore the fundamental properties of language that allow it to be a medium of thought and knowledge. Among these properties are truth, meaning and reference, notions that are closely linked together in what is often called the 'triangle of language'.
Developing the skills of thinking philosophically about language will have an impact beyond the immediately related philosophical topics. You will become a more powerful thinker, better prepared to make important decisions and less susceptible to being tricked and manipulated by others.

Literature
- William G. Lycan, G. *Philosophy of Language: A Contemporary Introduction* (New York: Routledge, 2008 [2nd ed.])
- A.P. Martinich,*The Philosophy of Language* (Oxford: OUP, 2000 [4th ed.])
- A selection of articles/chapters from primary sources.

Instructional format
Tutorial group meetings and lectures.

Examination
Papers.

HUM2046 Living in a Technological Culture: Introduction to Science and Technology Studies

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities & Social Sciences	No

Prerequisite
None.

Objectives
- To provide an introduction into the social studies of science, society and technology.
- To provide a basis for a critical reflection on our high-tech society.
- To provide different perspectives on the relation between society, science and technology.

Description of the course

While modern culture relies heavily on sophisticated instruments, techniques, and systems, most people think that the actual making of science and technology is the exclusive domain of scientists, inventors, engineers, and technicians: people who are fascinated by "how things work" and "making things work". Those not directly involved in the design or development of science and technology ("users" or "consumers") are thought to have little interest in the facts, materials, principles, or procedures found in the world of scientists and technicians. The only thing they seem to care about is the use of the scientific output and technology. However, people who do not spend much thought on the making of science and technology, commonly do not merit its use serious reflection either. Once things have been made or discovered, our interaction with them is understood to be a straightforward matter. We pick up our mobile phone, make some funny pictures with it, listen to music, twitter some details about what we do and where we are and chat with our friends. We board an airplane, fly from point A to point B, and then we get off the airplane. Although we are surrounded by the results of scientific endeavor and technologies of various kinds, they have become almost invisible and we take them for granted.

However, we live in a technological culture. Technology and science shape society, from the shaping of mobility patterns and gender and sexual identities, to the standardization of practices in health care. Mobile phones have changed what it means 'to be alone'; organ transplantation has redefined our understanding of life; 'scientific planning' has reshaped our policy-making practices. Technologies do not merely assist us in our everyday lives; they are also powerful forces acting to reshape our activities and their meanings. There is, vice versa, a cultural influence on science and technology too. Thus we can only hope to understand science and technology when we acknowledge their socio-cultural base. Historical and comparative studies have shown how different socio-cultural circumstances yield very different forms and contents of science and technology. Science and technology are, finally, also cultures themselves.

In this course we will analyze techno-science as a socio-cultural phenomenon. This course offers an introduction to Science and Technology Studies (STS). It will introduce you to the multiple ways in which science and technology, individuals and institutions mutually shape one another to the benefit and sometimes detriment of society. In this course, we take a "critical" approach to science and engineering. By this, we don't mean being negative about science nor technology. But like a good movie critic, you will think critically but constructive about aspects of science and technology by focusing on different empirical domains such as human enhancement (e.g. Google glasses, Ritalin, Blade runner], disasters [e.g. Fukushima, Hurricane Katerina, corona-crisis], the gene revolution (Monsanto) and the politics of artifacts (e.g. park benches, the UCM building and nuclear plants) while using a set of principles and approaches from the field of Science and Technology Studies.

Literature
- E-reader and material from the UM Library.

Instructional format
Tutorial group meetings, lectures and a video analysis.

Examination
Midterm: a group presentation of the analysis of an episode from Black Mirror SF-series.
Final paper: an individual academic paper.

HUM2047 The Future of Literature?

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite
None.

Recommended
Either as good preparation or follow up the following courses are related to the content we discuss:

HUM2022 Digital Media, HUM2030 Media and Technology – Philosophical Perspectives , HUM2059 Computational Thinking for the Arts and Culture, HUM2060 Poetry, Poetry Theory and Poetry Practices, HUM3036 Narrative Media and HUM3043 Acts of Literature – the Role of Prose, Poetry and Play in a Changing World.

Objectives
The course aims at familiarizing you with digitalization and literature and the specific actors the network consists of. We will:
- Introduce you to the field of electronic literature (history and genres, readers/users) from the perspective of the humanities.
- Introduce you to transformations we experience in respect to literature and technologies (e.g. role of authors, readers/users. publishing and archives, reading devices and types of reading).
- Introduce you to the distribution of literature, reading devices and electronic trash from the perspective of humanities and qualitative social sciences.

Description of the course
The relationship between digitalization and literature will be in the focus of this course. The advent of digital technologies raised concerns and questions, such as: Can digital texts be considered literature at all? What are the roles of author, reader and text? Beyond normative questionings, however, this debate reveals two relevant aspects: (1) that literature always inhabits a medium, and (2) that the nature of that medium matters. We will start to investigate electronic/digital literature, a type of literary production written on and for the computer screen whose discursive and conceptual complexity is constantly being negotiated in light of the affordances of the technologies that it inhabits. Works of electronic literature help to reimagine the act of writing, allowing for new and inventive ways of composing and telling stories, and equally new and inventive ways of reading them. Another aspect that matters are algorithms used in the production of electronic literature and data-driven characters/the use of Artificial Intelligence to create characters. One task will therefore also deal with algorithms and uses an introduction to algorithms based on storytelling. In a culture in which remix and appropriation of cultural content stands at the basis of cultural production but also the creation of works by a computer raise questions about authorship and creativity. The development that creativity is not necessarily understood as typically human but can also be seen in products executed by technology leads to a discussion of posthuman authorship or co-authorship. Creativity can be understood as processual and the work of art/literature as being the product of a variety of actors – human and non-human – involved. This also affects the market and questions of copyright.

Not only distribution matters but also archiving plays an important role in our digital age. New ways to archive literature are possible now that do not only make literature accessible and affordable to many readers but also raise concerns about what is being digitized and what is excluded, who decides about access to an archive and also how he structure of an archive is organized.
The course will also discuss reading devices and ecological questions/sustainability with a focus on electronic trash.

We will use sources such as academic publications, short stories and different genres of electronic literature but also videos to discuss the future of literature from these different angles to understand who the actors in the network that constitutes literature are.

Literature
- reference list (MU library), e-reader.
- Online sources.

Instructional format
Tutorial group meetings and lectures, viewing of a movie and a documentary.

Examination
Presentation, peer feedback on the presentations of other students (30%), academic paper (70%)

HUM2051 Philosophical Ethics

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite
None.

Objectives
- To help us to live in a better and freer world.
- To reflect upon our own moral behavior in society.
- To explore the most important ethical approaches that are necessary to understand the main societal problems of today and to act adequately.
- To study primary texts of ethics written by the most eminent philosophers of the past millennia.
- To support ethical decision making by analyzing professional practices.

Description of the course
We live in a fast-changing world. We have to make decisions about our study, our social relations, and our future. All these decisions are influenced by the norms and values we have developed in the course of our life. The importance of moral considerations is strongly growing. Nowadays, talk about ethics is everywhere, in the bar, in the boardroom, on the shop floor, on television, and in the journals and daily papers. In this course we will explore the field of philosophical ethics: a scientific reflection about morality.

In the first part of this course, we will study the grand narratives in ethics, examining Aristotelian, Stoic, Christian, Kantian, utilitarian, and postmodern approaches to ethics. We will discuss different questions: What is the nature, role, and foundation of ethics? Is ethics about 'the right thing to do', 'the good life', 'the good man', or all three together? Is there a universal moral framework, or can we only speak about a plurality of approaches? What is the relation between ethics and religion?

In the second part of this course, we will study some key disciplinary approaches in ethics. We will discuss environmental ethics and business ethics. Especially, we will pay attention to the application of the grand narratives in ethics to major problems in our society. We will analyze professional practices to identify different ethical aspects.

Literature
- Mark Timmons, *Moral theory. An Introduction,* 2013, Rowman & Littlefield Publishers, New York.
- Glenn Rogers, *21st Century Ethics. An Introduction to Moral Philosophy,* 2012, Simpson & Brook, Estherville.
- E-reader.

Instructional format
Lectures, tutorial group meetings, individual coaching, and a special assignment.

Examination
Participation, presentation of background research, and an essay.

HUM2054 Reading Philosophers

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisite
None.

Recommended
HUM1007 Introduction to Philosophy or COR1004 Political Philosophy.

Objectives
- To acquaint students with pivotal philosophical texts.
- To help students read primary texts of important philosophers and get intellectual pleasure from it.
- To introduce some classical philosophical problems.
- To become aware of different styles and sorts of philosophy.

Description of the course

How can an absurd novel like Voltaire's Candide (1759) be understood as 'philosophy'? Why did Plato use a dialogue with Socrates and and some friends and disciples instead of just presenting his theories in an orderly presented written argument? And why can philosophical texts be written quite systematically and be personal (Descartes) as well as in the form of seemingly associative notes and comments (as in Wittgenstein's famous Philosophical Investigations)?

In this course well known philosophical texts will be read and analyzed in detail. Reading philosophers, that is, the reading of some of their primary texts, is not only a pleasure in itself: most of the more interesting philosophers are also famous stylists. Therefore it is important to read the original texts instead of always relying on handbooks or (internet) encyclopedia texts to acquaint oneself with the central ideas of these philosophers.

Moreover, there is a lot to learn from reading philosophers themselves, to see how they are positioned in the tradition of philosophy and in the contemporary intellectual debate, to determine what interesting problems are, and how one could go about searching for some answers, solutions or new questions for our time.

Reading philosophers themselves also has merit for another reason: it turns out that philosophers use a variety of writing styles and publication media like a scientific treatise, a monograph, an essay, a collection of aphorisms or even a novel. And last but not least: they provide the best introduction into some of the classical philosophical problems like: What can we know? How should we valuate? What is justice? Is there something like moral sense? Are we free? How does language work? Who is (not) included or excluded?

In the course we single out a group of 6 philosophers: Plato, Descartes, Voltaire, Schopenhauer, Wittgenstein and Irigaray. They are responsible for some of the best work that has been produced in the philosophical tradition.

Literature
- Plato, *The Symposium* (172a-212c, 222c-223d).
- René Descartes, *Discourse on the method*. Chapters 1-5.
- Voltaire, *Candide. Or : Optimism.* Orig. *Candide ou l'Optimisme*.
- Arthur Schopenhauer, *On the Freedom of the Will* (except the fourth chapter). Orig. *Preisschrift über die Freiheit des Willens*.
- Ludwig Wittgenstein, *Philosophical Investigations.* §§ 1-108.
- Luce Irigaray, *Speculum of the other woman*. 1985, p.243-83.

Instructional format
Tutorial group meetings, including lectures.

Examination
Participation and two papers: a midterm essay and a final paper at the end.

HUM2056 Cultural Memory and Literature

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	No

Prerequisites
[HUM1003](#) Cultural Studies I or [HUM2003](#) The Making of Crucial Differences, and some knowledge/interest in close reading of literary texts.

Objectives
- To familiarize students with some of the key theoretical and methodological approaches within cultural memory studies: Halbwachs, Warburg, Nora, Assmann, Erll, Rigney.
- To introduce students to *conceptual analysis* and provide them with the necessary analytical skills.
- To provide students with an introduction into trauma (theory) and memory.
- To teach students close reading of literary texts and analyze literary strategies, styles and narrations of remembrance and trauma.
- To teach students to analyze literature and the arts as *ars memoriae*, reconstruct the interaction of memory imagination and poetic imagination: 'memory in literature and memory of literature'.
- To introduce students to Aby Warburg's theory of the "memory of images" and *pathos formulas*
- To enable students to identify and analyze the role of gender in constructions of cultural remembrance of the Holocaust.
- To introduce students to the (political) debate and the post-colonial dimension around the paradigms of *archive* and *repertoire* as concepts of cultural memory.
- To analyze debates connected to contested memorial monuments, competing victim memories and "multidirectional memory" (Rothberg).

Description of the course
Taking its cue from the current focus of the humanities on practices of collective cultural remembrance, the course focuses on literature as narrative and performative medium of memory. Literature fulfils a crucial role in recreating aspects of the past in the present. But is there a difference between 'memory in literature' and 'memory of literature'? Without remembrance and representation, cultural and individual life would be impossible; the same counts for cultural oblivion: total recall would mean madness. Not only individuals, but also social groups and nations as a whole construct their identities by re-appropriating and 'inventing' the past. Here memory and identity politics merge. The course will introduce central theories of memory and remembrance. Around 1900, the sociologist Maurice Halbwachs and the art historian Aby Warburg independently developed theories of "collective memory". Yet, it was not until the 1980s that Pierre Nora's lieux de mémoire and Jan and Aleida Assmann's concept of Cultural memory made memory studies resurface. Moreover, cultural remembrance depends entirely on processes of (re-)mediation. That is where literature, rituals, and the arts enter the field. Beginning with modern authors like Marcel Proust and Edgar Allan Poe, the theoretical texts will be accompanied by close readings of literary texts that shed light on the poetical creation of remembrance. With regards to literary analysis it is important to define the way in which remembrance and poetic imagination interact.

Memory studies started within Holocaust studies at the very moment when the generation of survivors passed away. Therefore, research in trauma and remembrance has taken centre stage. The course follows a genealogical approach to the "trauma paradigm" in memory studies. It refers back to Sigmund Freud's theory of "traumatic neurosis" and connects it with new approaches in trauma theory. It will focus on the question of how traumatic experiences have been expressed and represented in modern literature. Our central example is Kurt Vonnegut's novel Slaughterhouse 5 (1969). The course connects questions of cultural remembrance and trauma experience via literary narration, style, and intertextuality. Its focus on the role of gender in memory draws attention to the relevance of body images and gender myths for the construction of narrations and images of the past.

A post-colonial dimension will be added when we take a close look at the debate around the contested concepts of archive and repertoire in memory studies. If we link the performative repertoire to cultural memory, we will have to go beyond the long established Western model of memory as a fixed, mostly written "storehouse" of the past. If we take repertoire into account, we will have to consider and acknowledge embodied, sensual remembrance, narrated oral memory and gestural ritual repertoires as equal to texts, monuments and objects.

Required Literary Texts and Films
- Erll, Astrid. Memory in Culture. London: Palgrave Macmillan, 2011.

- Vonnegut, Kurt. Slaughterhouse-Five, or The Children's Crusade (1969). New York: Random House, 1991.
- Gadjo Dilo. Movie by T. Gitlif, 1997 (on youtube available with English subtitles).

Instructional format

Lectures, tutorial group meetings and film viewings.

Examination

In-class presentations and a final research essay (3500 words), doing a conceptual analysis or applying the concepts discussed to Kurt Vonnegut's novel or to the film. Every student has three options (electives).

HUM2057 Religion and Secularization

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
HUM1007 Introduction to Philosophy *or* HUM2008 Ancient Philosophy *or* HUM2021 Medieval Civilization *or* COR1002 Philosophy of Science.

Objectives
- To familiarize you with the academic study of religion as a cultural phenomenon against the background of a secularizing world.
- To provide insight into key ideas, themes and arguments on the nature, function, and politics of religion.

Description of the course
The course provides a broad approach to religion as a cultural phenomenon. It focuses on the following groups of questions and topics:
1. On defining religion
        What is religion about? How does religion differ from mythology, the sciences, and the arts? What do secularization processes involve? In this part of the course we will look into some significant philosophical perspectives on the nature of religion and secularism.
2. On the contents of religion
        First, we will briefly consider the most important characteristics of the major world religions. Against this background we will discuss a number of key narratives and themes from the Judaeo-Christian heritage, taken from the Hebrew Bible and the New Testament (such as the creation story, book of Job, death and resurrection of Christ, epistles by Paul).
3. On the politics of religion
        In the last part of the course we will look at the role of religion and religious institutions within political power structures, ranging from the Vatican to the Middle-East.

Literature
- *Immanuel Kant, Religion within the Bounds of bare Reason (1793)*
- *Friedrich Nietzsche, The Antichrist (1895).*
- *Sigmund Freud, The Future of an Illusion (1927).*
- *C.G. Jung, Answer to Job (1952).*
- *Karen Armstrong, A History of God: The 4,000-Year Quest of Judaism, Christianity, and Islam (1993).*
- *Ole Wæver, Fear and Faith: Religion as an International Security Issue (2006).*
- *Maria Kardaun, Fighting the Angel (2011).*
- *Frans de Waal, The Bonobo and the Atheist: In Search of Humanism among the Primates (2013)*

Instructional format
Tutorial group meetings and lectures.

Examination
A midterm (analytical) paper devoted to philosophical perspectives on religion; a final research paper devoted to a topic to be chosen by the student; a presentation about the research paper.

HUM2058 History of Contemporary Spirituality

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisite
None. This is an *introduction* to the discipline of Religious Studies—not be confused with Theology—with a focus on contemporary non-institutionalized "spirituality." However, some students may experience it as an *advanced* course, because it introduces methods and theories that are not covered in other courses at UCM or even at UM.

Recommended
Recommended preparatory courses are: HUM2057 Religion and Secularization, HUM1007 Introduction to Philosophy, HUM2005 Enlightenment and Romanticism, HUM2018 Cultural Diversity in a Globalizing World.

Objectives
- Recognize social and (inter)cultural patterns and developments in the history of contemporary spirituality.
- Recognize entanglements of "secular" and "religious" discourses in the history of contemporary spirituality.
- Understand how such intercultural and interdisciplinary developments have shaped contemporary spiritual beliefs and practices.
- Apply this understanding in critical analyses of popular and academic perceptions of contemporary spiritual beliefs and practices, including your own.

Description of the course
This course delves into the socio-historical contexts of non-institutionalized belief systems at the intercultural and interdisciplinary crossroads of "eastern" and "western" religious, philosophical, psychological and scientific discourses in modern western cultures. It looks at alternative beliefs and practices of Asian and Euro-American charismatic leaders and new religious movements—popularly referred to as "spiritual teachers" or "gurus" and "cults"— in modern Europe and North America, after 1800. Think of American Transcendentalism, Theosophy, Neo-Hinduism, Neo-Buddhism, Transpersonal Psychology as well as New Age movements and their offshoots.

Students will critically reflect on alternative quests for meaning outside conventional religions and sciences. In doing so, they will learn more about post-Enlightenment responses to the "age of reason," post-colonial encounters between "eastern" and "western" traditions, and post-modern blends of methods and theories from different social and academic domains, which have culminated in a growing "cultic milieu" of "seekers" across modern western cultures. "Seekers" are people who identify as "spiritual, but not religious."

During this course, students confront questions such as: Why have so many seekers in modern western cultures turned away from conventional western religions and sciences? Why are they turning to eastern and western esoteric traditions instead? How are they combining eastern and western methods and theories into new sources of meaning? What combinations have we seen in the recent past and which ones do we see around today?

Literature
- E-reader.

Instructional format
Lecture and tutorials.

Examination
A two-part (self-reflective) book review.
A research paper on a relevant topic of your own choice that is significantly related to the content of this course.

HUM2059 Computational Thinking for the Arts and Culture

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
None.

Objectives
- Explore different methodological approaches to computationally analyse textual corpora;
- Use text analysis to develop and respond to research questions;
- Understand how to read text (non-semantically) through visualisations;
- Critically reflect on the challenges researchers face when working with textual data;.

Description of the course

What do you do with a million books? In previous decades only the most major of the world's libraries could even house this many books. But even if you had a lifetime to do nothing but read, how would you get through this many books, and remember what you had read five years before. Fast forward to the Twenty-first century. Today we probably all have access to a million books, but we would not think of reading them in the old style (eg. via close reading, one word, one paragraph, one page after the other). Rather, we would read them digitally. Digital 'reading' of texts goes by many names including text analysis, text mining, and data mining. In this class we are going to focus on the first of these methods, text analysis, an algorithmic-driven method of extracting text from (large) corpora, including literary texts, historical sources, and social media. The text analysis tools we will introduce you to will visualise the text, making it easier to see patterns and come to insights in seconds or minutes where previously this might have taken years. We will explore these methods and practices through distant reading, a recent concept used to theorise the practice of reading algorithmically.

This course will take you through a mini big data project to provide you with hands-on experience and understanding of the affordances and limitations of text analysis methods. Theoretically, we will explore how the representation of text in more visual formats which are typically removed from its semantic contexts, offers opportunities for both new insights as well as misrepresentation. An overarching goal of the course is to help you become more savvy users of digital information: the implications and challenges that methods and technologies pose to conventional research, analysis and publication in the arts, humanities, and social sciences, including issues such as transparency, authenticity, and bias.

Literature
- Jänicke, S., Franzini, G., Cheema, M.F., and Scheuermann, G. (2015). On Close and Distant Reading in Digital Humanities: A Survey and Future Challenges. In R. Borgo, F. Ganovelli, and I. Viola (Eds) Eurographics Conference on Visualization (EuroVis).
- Leurs, K. (2017). Feminist data studies: using digital methods for ethical, reflexive and situated socio-cultural research. Feminist Review, 115(1), 130-154.
- Sinclair, S. and Rockwell, S. (2016). Text Analysis and Visualization: Making Meaning Count, In S. Schreibman, R. Siemens, and J. Unsworth (Eds.) A New Companion to the Digital Humanities (pp. 274–90). Wiley Blackwell

Instructional format
Lectures and tutorial group meetings.

Examination
1) A group presentation on the affordances and limitations of data analysis and visualization (50%);
2) A project on big data analysis and visualization accompanied by an essay (50%).

HUM2060 Poetry, Poetry Theory and Poetry Practices

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisite
None.

Objective
The main aims of this course are:
- To acquaint the students with the theory and practice of modern western poetry.
- To introduce students to a view on poetry in terms of Wittgenstein's family resemblance, in the sense that poetry is made up by formal features that practices share in different combinations.
- To provide students with analytical tools for studying different poetry practices, not only in literary, but also in ritualistic, religious, or other relevant contexts.
- To teach the students to present their own case studies of poetry practices.

Description of the course
Poetry usually falls under the general heading of literature. Literature however is a relatively recent concept as well as a recent cultural institution and it seems that one of the main goals of poetry theory of the last centuries has been to give poetry a firm literary profile. Looking at western modern poetry and its reception this goal has certainly been reached, even to an extent that what poetry could and should be is realized in this western modern tradition that turned poetry into words-on-the-page, while writing was never indispensable for poetry before. However, this western modern tradition is just another practice of poetry in the sense that it is a result of a particular merge of two totally independent structures: human language and rhythm. Whereas rhythm in itself seems to defy any literary consideration, in modern western poetry it is usually treated as an icon of the alleged meaning of a poem, thereby safeguarding modern western poetry as a literary genre. But if we take poetry in terms of Wittgenstein's family resemblance we are able to see different practices world-wide that share more than one feature with modern western poetry, or just one, like rhythm, and we see unexpected lineages of features, like non-human animal lineages of, again, rhythm (birdsong is the obvious example). But it's not just a question of lineage, in other words the diachronic aspect of the family of poetry. Synchronically speaking many practices should be considered as part of the family of poetry too. Practices that do not need to be able to function the literary set of principles and conventions that fixed a western understanding of poetry. In this course we will first identify and study the different features of poetry, like rhythm, metre, rhyme, texture, syntax, grammar, imagery, etc. Then we will explore and study practices, western and non-western, synchronic and diachronic, as members of the family of poetry.

Literature
- E-reader.

Instructional format
Tutorial group meetings.

Examination
An essay and a presentation of the essay proposal.

HUM3019 Totalitarian Temptation

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisites

At least two of the following courses: HUM1013 The Idea of Europe: The Intellectual History of Europe, COR1003 Contemporary World History, HUM2007 States and Nations in Europe, from the Middle Ages to the First World War.

Objective

- To introduce students to major theories on totalitarianism and their aftermath and familiarize them with academic discussions and debates on the applicability of this concept to various 20th century movements and regimes and instances of mass violence.

Description of the course

This course in historical studies studies the discussions and debates surrounding the much-contested concept of totalitarianism. The course shall explore and compare movements and regimes, such as the National Socialist, the Fascist and the Soviet communist, that aimed to radically transform societies and aspired to rule in a totalizing manner. We shall link their histories to those of mass violence and human rights. We shall also discuss cultural life under such regimes as well as their aftermath and memory. Explicitly drawing on intellectual history, cultural and literary studies as well as legal studies, the course shall address relevant philosophical concerns, most particularly questions in epistemology and ethics. The course closes with analyses of contemporary discussions of the supposed fascist revival and an ongoing case of genocide.

Literature

- Geyer, Michael and Sheila Fitzpatrick (2009). *Beyond Totalitarianism. Stalinism and Nazism Compared*. Cambridge: Cambridge University Press.
- E-reader.

Instructional format

Tutorial group meetings and lectures.

Examination

Mid-term literature review and research paper of 3 000 words at the end of the course.

HUM3029 Literature and Psychology

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities	No

Prerequisites
SKI2084 Writing in an Academic Context: Improving Argumentation and Style.

Recommended
HUM1007 Introduction to Philosophy.

Objectives
- To introduce you to depth psychological (viz. Freudian and Jungian) literary criticism.
- To help you develop your sensitivity for depth psychological dimensions that works of art and literature may have.
- To provide you with the means to distinguish adequate literary interpretations from less adequate ones: on what reasonable grounds, if at all, can we decide that one (depth psychological) interpretation of a work of literature does more justice to the text than a competing one?

Description of the course
In the first part of the course students will become familiar with the basic elements of psychoanalysis (Freud) and analytical psychology (Jung). Special attention will be paid to depth psychological theories on art and literature.

In the second part we shall read a number of widely diverging depth psychological interpretations of literary texts, such as Sophocles's Oedipus rex, Saint-Exupéry's Le petit prince, Goncharov's Oblomov, Hoffmann's The Sandman, Emily Brontë's Wuthering Heights, Robert Louis Stevenson's The Strange Case of Dr Jekyll and Mr Hyde, several fairy tales, myths, poems, and short stories.

The last part of the course is devoted to some epistemological aspects of depth psychological literary criticism. We will go into three main questions: What types of rules are to be observed when interpreting literary texts? To what extent does depth psychological literary criticism qualify as an academic discipline? And, finally, to what extent do depth psychological theories like psychoanalysis and analytical psychology qualify as academic disciplines?

Literature
- Bruno Bettelheim, The Uses of Enchantment (2nd, 1991).
- Umberto Eco, The Limits of Interpretation (2nd, 1991).
- Marie-Louise von Franz, Puer aeternus (3rd, 2000).
- Sigmund Freud, Creative Writers and Day-Dreaming (1908).
- C.G. Jung, Psychology and Literature (1930).
- Karl Popper, Conjectures and Refutations, the Growth of Scientific Knowledge. London: Routledge. (1963).
- Adolf Grünbaum, The Foundations of Psychoanalysis. A Philosophical Critique (1984).

Instructional format
Tutorial group meetings and lectures.

Examination
A presentation and a final paper.

HUM3034   World History

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	Yes

Prerequisites

Any course in history or sociology including COR1003 Contemporary World History.

Objective

- To understand some of the major issues and episodes that have shaped the history of mankind. The focus will be on themes and topics that have had or are still having long term influences on historical development.

Description of the course

Flowing from this objective, the course deals with the over all history of mankind, and a number of the decisive transformations involved in that history.

What sort of creatures are we? How have we evolved from and lived before we became homo sapiens? What sort of animals are our ancestors?

Important topics nearer in time are the agricultural and industrial revolutions. The agricultural or neolithic revolution has changed us and the world permanently. In a relatively brief period we went from hunting and gathering to tilling the soil and domesticating plants and animals. Why and how did we do this? Since the agricultural revolution our numbers have multiplied beyond comprehension. Societies became increasingly complex and stratified.

The industrial revolution lifted everything to a new unprecedented plane. A type of society arose, driven by industrial innovation and run on fossil fuels. We are still living in that kind of society today, so it is interesting to know how it came about.

The course will also deal with topics like the role of war, disease, religion, worldviews and finance in shaping history. Take disease. Their ways of life brought men in contact with all sorts of diseases. Especially after the agricultural revolution we had to adapt to diseases we caught from our domesticated animals. We still have to do this. Look at present day threats like bird flu. Living in some form of armed peace with diseases has always been a major characteristic of societies. How did we do this?

We will end the course by looking into the harnessing of energy, and the necessary limits to that in the various societal arrangements, such as hunter-gatherers, farmers and fossil-fuelers like us.

Literature

- Material will be handed out at the beginning of the course.

Instructional format

Tutorial group meetings and lectures.

Examination

Paper and final exam with open questions.

HUM3036 Narrative Media

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities	No

Prerequisites
At least two 2000-level courses in the Humanities or Social Sciences.

Objectives
- To familiarize students with the methods of narratology (the study of storytelling) and important theories revolving around narratology.
- To analyze different media such as literature, paintings, photographs, comics, film, digital literature, and computer games.

Description of the course
The first part of the course introduces main concepts from narratology, such as story, discourse, focalization, and narration. In addition, students will learn the differences between a structuralist and a postclassical approach to narratology.

During the second part of the course, narrativity in different media will be subject of investigation. We ask how different media construct stories and to what extent these stories are medium-specific. The media under study are the short story, the fixed image and series of images, comics, film, hyperfiction and digital games. For students with particular interest in literature, the *Handbook of Narrative Analysis* (2005) will be most instructive, while *Narrative across Media* will be most useful to students who are more oriented towards other media. We will read chapters from both books in this course as well as other literature that addresses the narrativity of media.

The final essay has to show that students are able to apply the methods introduced during the course to a case study that they are free to choose. Examples are the novel *House of Leaves*, the short story collection *Olive Kitteridge*, the comic *Deadpool* and its film adaptation, the graphic novel *Persepolis*, the film *5x2*, and the game *L.A. Noire*. As this is a course in the humanities, an approach to storytelling from the social sciences or psychology is only possible in comparison to methods from the humanities.

Literature
The following handbooks are the most crucial:
- Herman, L. and Vervaeck, B. (2005). *Handbook of Narrative Analysis*. Lincoln: University of Nebraska Press.
- Ryan, M.-L. (2004). *Narrative across Media*. Lincoln, London: University of Nebraska Press.

We wil also make use of excerpts from other sources, such as:
- Hutcheon, L. with S. O'Flynn (2013). *A Theory of Adaptation* (second edition). New York: Routledge.
- McCloud, S. (1993). *Understanding Comics: The Invisible Art*. New York: HarperCollins.
- Ryan, M.-L. (eds.). *Intermediality and Storytelling*. Berlin: de Gruyter.
- Verstraten, P. (2009). *Film Narratology*. Toronto: University of Toronto Press.

Instructional format
Tutorial group meetings, lectures and film screenings.

Examination
A short presentation (20%), participation and tutor performance (20%), and a final essay of max. 4,500 words (60%).

HUM3040 Crucial Differences in the 21st Century

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities	No

Prerequisites

HUM2003 The Making of Crucial Differences (strongly recommended!) or another relevant 2000-level course in the Humanities or Social Sciences.

Objectives

Upon completion of this course students are able:

- To examine how contemporary configurations of gender, sexuality, race/ethnicity, and other 'crucial differences' structure contemporary cultural discourses and practices, as well as social and individual identities and institutions.
- To identify and take part in topical academic and societal debates within contemporary gender and diversity studies.
- To explain how multiple identities and experiences of difference and inequality interact by adopting intersectionality as a critical theory and method.
- To apply the analytical and critical skills needed to examine the dynamics through which identity and difference, inclusion and exclusion, equality and inequality are continuously produced and reproduced.
- To construct an effective research design for an undergraduate research paper within the field of gender and diversity studies.

Description of the course

This course considers a variety of contemporary configurations of gender, sexuality, race/ethnicity, class, age, religion, and other categories of difference. You will learn to examine the way in which these 'crucial differences' are constituted in the late twentieth and early twenty-first century, as well as to analyze the ways in which they function on social, cultural, political, and symbolic levels. The emergence of the various social movements during the 1960s and 1970s, such as the women's movement, the civil rights movement, and gay and lesbian liberation, and their lasting impact on society today, serves as a starting point of the course. We will examine how these diverse movements have shaped and reshaped the form and content of the identity of racial/ethnic minorities, feminists, LGBTQ+ people and other minoritized groups on individual and collective levels. Special attention will be directed to the notion of intersectionality, which refers to the interaction between multiple categories of difference in cultural, social and individual practices, and the effects of these interactions in terms of power and inequality.

Subsequently, we will take a closer look at the complexity of such multiple differences and inequalities by tracing the entangled workings of gender, sexuality, race/ethnicity, class, age, and religion through a variety of topical cases. We will look at the way in which such categories realign in various contexts of crisis and conflict, ranging from the late twentieth century wars in Rwanda and the former Yugoslavia to the complex force-fields of (neo-)nationalism, populism, and xenophobia today. We will use a queer theoretical approach to analyze the complex relations between norms of gender and sexuality in the structuring of contemporary performances of identity in a variety of social, cultural, and institutional environments. We will critically examine contemporary constructions of whiteness and the role of race in the construction of national identity. We will direct special attention to the emergence of sexual nationalisms across and beyond Europe today, focussing on the prominent place that women's sexual liberation and gay rights occupy in contemporary debates about Islam and multicultural citizenship.

As these cases indicate, the course draws on a variety of geographical and cultural locations and contexts. Diversity is also exemplified in the interdisciplinarity that characterizes gender and diversity studies as a scholarly field. The texts used in this course draw on theories and methods from disciplines such as philosophy, sociology, anthropology, and cultural studies, as well as from the fields of feminist theory, postcolonial theory, and queer studies. Through critical inquiry into concrete cases as well as major texts - including modern classics in the field such as Judith Butler's *Gender Trouble* and Joan Scott's *The Politics of the Veil* - this course dynamically re-conceptualizes the intersections between the various 'crucial differences' by examining the multiple ways in which processes of identity and difference, inclusion and exclusion, equality and inequality are produced and reproduced in ongoing flows of negotiation and transformation.

Literature

- E-reader.

Instructional format

Tutorial group meetings and lectures.

Examination

Midterm take home exam and final research paper.

HUM3042 Biopoetics: An Evolutionary Approach to Art, Literature, Music and Religion

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities	No

Prerequisites

At least two 2000-level courses in the Humanities or at least two 2000-level courses in the Sciences.

Objective

- To be able to evaluate and apply Darwinist approaches to practices in art, literature, music and religion.

Description of the course

Students will familiarize themselves with the basic concepts of evolutionary theory in order to be able to evaluate the controversies and debates within the framework of a Darwinist perspective on practices in art, literature, music, and religion. Several themes will be discussed, such as: the mating mind; artistic universals; human nature: blank or pre-wired; the sound and rhythm of poetry; the science of art; the origins of music; grooming, gossip, and the novel; art as adaptation vs. art as 'cheesecake' for the mind; rituals in religion, etc.

Literature

- Charlesworh, B., & Charlesworh, D. (2003). *Evolution: A very short introduction*. Oxford University Press, Oxford.
- Carroll, J. (2004). *Literary Darwinism: Evolution, Human Nature, and Literature*. London: Routledge.
- Gotschall, J., & Wilson, D.S. (2005). *The Literary Animal: Evolution and the Nature of Narrative*. Northwestern University Press.
- Turner, M. (2006). *The Artful Mind: Cognitive Science and the Riddle of Human Creativity*. Oxford University Press.

Instructional format

Tutorial group meetings, lectures and video viewings (documentaries).

Examination

An essay and a presentation of the essay.

HUM3043 Acts of Literature: The Role of prose, Poetry and Plays in a Changing World

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Humanities & Social Sciences	No

Prerequisites

At least one relevant 2000-level course in the Humanities or at least one relevant 2000-level course in the Social Sciences.

Objective

The main aims of this course are
- To acquaint the students with the history of ideas on possible functions of literature.
- To familiarize the students with the notion of the work of literature as an event and as an experience
- To introduce students to periods of societal change in western and non-western societies and the role of literature played in it.
- To provide the students with analytical tools for contextualizing (historicizing, situating, comparing) the case studies in the course.
- To teach the students to present their own case studies as possible contributions to the course of the next year's edition.

Description of the course

As stated in Eleonora Belfiore's and Oliver Bennett's *The social impact of the arts*: *An intellectual history* (2008) the question of what the function of literature could be – or should be – produced from Aristotle on many answers that could roughly be grouped under the following overarching concepts: **catharsis** (emotional, didactical, or intellectual**), personal well-being** (literature as therapy, play, or experience), **education and self-development** (basically the humanist's view of literature as, in Stephen Spender's words, 'central medium for the realization of man's search for significance in life'), **moral improvement and civilization** (French Enlightenment, Kant, Martha Nussbaum), **political instrument** (Brecht, social realism, nazi and fascist literature, feminist, postcolonial, and minority literature, often also in the sense of the unmasking of literature as vehicles for accepting hierarchies in society: Orwell, Foucault, Said, Judith Butler, the Frankfurt School), **social stratification** (Weber, Simmel, Bourdieu), and the **rejection** of any of these functions (Kant again, *l'art pour l'art*). However, the starting point of the course is the notion that literature exists only in the readings given to it: literature has no existence outside these readings. The work of literature is an **event** or, from the reader's position, an **experience**, both set in a particular **culture** that is made up by habits, norms, values, representations, beliefs, expectations, and prejudices. With the recent merging of literature's functions of education and moral improvement in mind (e.g. for the benefit of democracy, see Martha Nussbaum's work), the main challenge of the course is trying to find out in what way the ethical and political demand made by a literary work is to be found in what makes it literature, as an event and as an experience, rather than in properties it shares with other discourses, such as historical writing, biographies, and journalistic work. In other words: what is it that makes acts of literature in society **literary acts**?

Literature
- E-reader.

Instructional format

Tutorial group meetings.

Examination

An essay and a presentation of the essay proposal.

HUM3045 Distributive Justice in Contemporary Political Philosophy

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Humanities & Social Sciences	No

Prerequisite
COR1004 Political Philosophy.

Recommended
HUM1007 Introduction to Philosophy and/or HUM2051 Philosophical Ethics.

Objectives
- To examine some recent developments in political philosophy in the field of distributive justice.
- To engage with the work of today's leading political philosophers in this field and critically evaluate their arguments.
- To discover one's preferred conception of justice.

Description of the course
Distributive Justice concerns the morally correct way of distributing the burdens and benefits of social cooperation among citizens. In the wake of the publication of John Rawls's monumental *A Theory of Justice,* there has been an explosion of political philosophizing about this issue, one that continues to this day. This course will examine the work of some of today's most prominent political philosophers working in the field of justice. In doing so we will study several topics that are related to some of the issues discussed in COR1004 (Political Philosophy). As such the course is designed to be a sequel to that course, and familiarity with the concepts and authors discussed in that course is presumed.

Having said that, this course is distinctive in several respects. First of all, the course will strictly focus on debates within academia, rather than hot political debates within the wider community. Secondly, the course will exclusively use original primary texts, i.e. original scientific articles and book chapters. Thirdly, the course will be particularly concerned with the construction and evaluation of the minutia of argument. We will be looking at the strengths and weakness of the arguments presented for certain ethical claims and positions, with the aim of figuring out whether we agree with them, and to determine what our own conception of justice is.

Literature
- E-Reader containing contemporary papers and chapters.

Instructional Format
Tutorial group meetings.

Examination
A final paper presenting the student's considered views on the question of distributive justice, and a critical review of one of the articles discussed.

HUM3049 Science, Power and the Construction of Facts

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities & Social Sciences	No

Prerequisite
HUM2046 Living in a Technological Culture: Introduction to Science and Technology Studies.

Objectives
By the end of this course students should be able:
- To describe the contemporary challenges and dynamics of knowledge production in the sciences.
- To identify the complexities of how scientific knowledge is distributed and communicated in society
- To critically analyze 'common sense' views of the making and use of scientific claims.

Description of the course
Science is the system of knowledge production through which truths are constructed, and as a consequence is an incredibly powerful institution that requires critical examination. At the same time, significant contemporary movements of "alternative facts" (Conway 2017) and "post-truth politics" are underway (Roberts, 2010). What is the relationship between these two phenomena, and how is power enacted through the establishment of "facts"? In order to understand the power Science enacts in its production of "facts" this course looks to the social, cultural, historical, political, and economic contexts through which science is practiced and scientific knowledge is circulated through society. In doing so we will take a closer look at the production and dissimination of technoscience outputs, and will study science in action in its immediate environment as well as in its role and position in society. To do so we consider science and its scientists as 'a tribe'. To take this idea seriously we need to critically analyze notions of objectivity, expertise, commercialisation, integrity, and credibility that are central to scientific knowledge production. This perspective will help us to understand how science operates in today's complex world. To gain insight in science we zoom in on the organization of knowledge production and its collaborative character. We also study processes in which credible facts are established and published. Furthermore, this course also pays attention to the integrity of science and in particular its grey areas. Beside the immediate context in which scientific facts are established (i.e. the lab), the course also takes into account the wider socio-economic context in which science operates. This involves not only the commercialization of science, but also the way its promises and expectations are related to our hopes and fears. Finally, you will gain insights into the way the cultural-historical contexts affects the interpretation of facts. It is along these lines that we enter the world of the scientists. Based on discussions and analyses of these topics the course aims to make you reflect critically on 'common sense' views of the making and use of scientific claims. Besides tutorial meetings, the course also involves lectures, discussion meetings, video analysis, and a visit to a scientific lab for an interview.

Literature
- E-Reader containing diverse academic journal articles.

Instructional format
Tutorial group meetings, lectures, and a visit to a scientific lab/ or interview with a scientist.

Examination
An individual paper and group presentation.

HUM3050 A Cultural Critique of Our Aging Society

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities & Social Sciences	No

Prerequisite
A 1000- or 2000-level course in humanities or social sciences, for instance HUM1003 Cultural Studies I: Doing Cultural Studies, HUM2003 The Making of Crucial Differences, SSC1029 Sociological Perspectives or SSC2065 Theories of Social Order.

Objectives
- To understand age as an identity category that intersects with other categories like gender, sexuality, disability, and ethnicity.
- To distinguish between multiple, disciplinarily-influenced ways of defining 'age' including chronologically, functionally, subjectively, and culturally.
- To recognize ageist discourses (cf. the reduction of aging to physical and mental decline) and practices and to reflect on attitudes towards age.
- To distinguish between realistic concerns and the alarmist hype surrounding global population aging.
- To understand different methods that are implemented in aging research, ranging from visual analysis to ethnographic approaches.

Description of the course
If you have enjoyed courses in crucial differences, cultural studies, and identities, this course will be another eye-opener. It focuses on age as identity marker and is set up in true interdisciplinary fashion encompassing perspectives from economy, history, the arts, globalisation and gender studies, amongst others. If you believe aging is a far removed from your personal sphere – think twice and continue reading!

Headlines everywhere tell us that ours is a graying world and that population aging will be a defining influence on our twenty-first century, radically affecting public health and national economies. These demographic predictions—the result of the trends of declining mortality and increasing longevity—are typically accompanied by dire warnings of the challenges ahead: unsustainable pension systems which will encumber younger generations, the critical need for more caregivers and more resources to care for the increasing numbers of those who are frail and dependent, concerns about maintaining technological progress and competitive workforces with an aging labor force, etc. Rarely are such numbers presented in terms of the possible benefits that population aging might bring, such as in experienced leadership, informal caregiving, and a more flexible labor force less hampered by child care. Also often excluded from these projections is any sense of what life is actually like for the diverse millions of people who grow into old age. How do we know what these numbers will mean for our economies, our social structures, our loved ones, and ourselves? To begin to address that question, we need to understand better what it means to grow old in the twenty first century and how this meaning may have developed or changed over the course of history or be differently shaped by national and transnational cultures. Also, it requires research into the many images and stories of aging that circulate in popular culture and influence the way we think about older people. This, then, will form the heart of the inquiry we will make in this course. We will explore what aging is and means from different disciplinary, historical and (trans)national perspectives, examining the concerns raised about aging societies and the causes and consequences of ageism, which is prejudice or discrimination based upon a person's age.

Aging is a topic that we all have a stake in. On one level, this stake is very personal. If we live the long lives we desire, we will all become older, whether or not the label "old" is one we fear or desire. On a larger scale, the concerns of population aging cross every discipline and ageism pervades all parts of our social and personal lives, even when we don't recognize it. Whatever occupation you pursue, a deeper understanding of aging will have relevance. This course will prepare you to engage critically in the current and future debates about our aging society and to interrogate your hopes and fears for your own aging experiences. Theoretically and methodologically, this course is part of diversity studies as it adds the category of age to other identity markers, such as gender, sexuality, class, ethnicity, and religion.

Literature
- E-reader containing excerpts from books and relevant journals.

Instructional format
Tutorial group meetings, (guest) lectures, and a feed-back session in relation to the final paper.

Examination
The assessment of this course is based on (1) classroom participation and your performance as discussion leader, (2) a presentation, and (3) a final paper.

HUM3051 Medical Humanities: Bodies & Minds, Histories of the Normal and the Pathological

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities & Social Sciences	No

NB: This course is highly interdisciplinary (philosophy, history, cultural studies, medical anthropology & sociology, several branches of medicine). It is situated at the crossroads of Social Sciences, Humanities and Science.

Prerequisite
Students should have taken at least one of the two following courses: COR1002 Philosophy of Science or HUM1003 Cultural Studies I: Doing Cultural Studies.

Objectives
- To gain knowledge of different influential conceptions of 'body' and 'mind', 'healthy' and 'sick', 'normal' and 'pathological', 'regular' and 'deviant'.
- To gain understanding of how cultural, social, economic, legal, scientific and religious contexts play a role in the construction and consequences of these distinctions.

Description of the course
Medical humanities acknowledge that instead of being fixed entities, health and illness are constantly changing, ambiguous phenomena. What is called healthy (sane) or ill (insane) depends indeed on a large variety of issues and dynamics: cultural, socio-economical, and religious aspects; moral system; legal system; science; technology; art and media etc. This course approaches the question of health and illness through a philosophical, anthropological and sociological exploration of "bodies" and "minds". Through a historical and cross-cultural perspective it will discuss various concepts of body and mind. We will discuss how and why some bodies and minds are considered as normal and others as abnormal or pathological. For this we will draw on scientific, social, cultural and economic contexts, but also on how bodies and minds are represented in art and (popular) culture. Cases include cosmetic surgery; the modern hospital; boxing in the ghetto; organ transplantation; depression; menopause; prostheses in Paralympic athletes; medical imaging technologies; the war on cancer; depression.

Literature
- E-Reader. (Articles that are not included in the E-Reader will be made available for photocopying during the course). A book on a special topic in this field, selected by you from a list offered.

Instructional format
Tutorial group meetings and lectures. Additionaly, field visits to sites such as the anatomical cutting room.

Examination
Participation tutorials and field visits; Midterm book review and presentation; End term essay and presentation.

HUM3052 Lifting the Iron Curtain. Modern and Contemporary Eastern Europe

Semester	Period	ECTS	Core	Device Free
Fall	1	5	Humanities	No

Prerequisite
COR1003 Contemporary World History and one of the following: HUM1013 The Idea of Europe: The Intellectual History of Europe, HUM2007 States and Nations in Europe. From the Middle Ages to the First World War, SSC1006/SSC2002 International Relations: Themes and Theories, SSC1025 Introduction to Political Science.

Objective
The course explores key developments in Eastern Europe over the past hundred years from a comparative point of view with a focus on communist regimes (discipline of history and field of Soviet studies) as well as contemporary trends, such as democratization and Europeanization, economic transformations and crises, as well as violent conflicts since 1989-91 (comparative politics and international relations, economic history, peace and conflict studies). The course aims to broaden students' horizons to a region which has been the central stage of numerous recent transformations and cataclysms in Europe. It seeks to equip students with the tools to analyze modern and contemporary Eastern Europe from a multidisciplinary perspective.

Description of the course
Lifting the Iron Curtain studies the political, social and economic transformation of Eastern Europe from the end of the First World War till today. This multidisciplinary course can be divided into two major parts: a historical one devoted to the 'short twentieth century' until 1989-91 and a contemporary one exploring the achievements and shortcomings of the three decades since. The first half of the course starts by examining East-West relations in Europe on a material and discursive level. It continues with discussing the emergence of the nation state system and the rise and fall of democracy after the First World War. It also focuses on the practically simultaneous emergence of the Bolshevik regime in the (newly created) Soviet Union as well as the development of this regime under Lenin and Stalin. The course includes sessions devoted to the origins of Soviet-type regimes in Eastern Europe; the major challenges these regimes had to face, such the Hungarian uprising or the Prague Spring and the reasons behind their unexpected, sudden collapse in 1989-91. The second half of the course assesses the political and economic transformation of Eastern Europe since 1989-91. Questions regarding democratization and the quality of democracy in the region as well as the European opening and the related expectations, hopes and disappointments will be in the center of our attention. We shall also zoom in on the origins and unfolding of the two major violent conflicts in the region since, that in former Yugoslavia in the 1990s and the ongoing one in Ukraine. The course closes with a discussion of the major challenges Eastern European countries confront today.

Literature
- Connelly, John (2020). From Peoples into Nations: A History of Eastern Europe. Princeton: Princeton University Press.
- Klimó, Árpád von and Livezeanu, Irina, eds. (2017). The Routledge History of East Central Europe since 1700. London: Routledge.

Instructional format
Tutorial group meetings twice a week, lectures and documentaries.

Examination
Country presentation and final research paper of 3500 words (list of potential topics to be circulated).

HUM3053 The Idea of Africa

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Humanities & Social Sciences	No

Prerequisite

One 1000 level course in either the Humanities or the Social Sciences. Two 2000 level courses within the following fields: philosophy, sociology, international relations, cultural studies, history, media-and art studies and political science.

Objective

- To become critically reflexive about Western ideas and images of Africa and to dismantle European constructions of the African continent.
- The course will provide students with a first-hand experience of reading works by and learning from African scholars from within and outside of the continent.

Description of the course

This comprehensive course - the title of which is taken from Valentin-Yves Mudimbe - provides students with an overview of African history and politics ranging from pre-colonialism to contemporary debates on African politics. Course readings are predominantly based on writings that are produced either on the African continent or by African writers and/or scholars. We start out the course with an interrogation into how we imagine the continent from within and outside of Africa. Does the "single story" narrative, i.e. stereotypical representations that involve images of poverty, starvation and war, influence our imagination as outlined by Chimamanda Ngozi Adichie or is our imagination more multilayered? We then look into African epistemologies of knowledge to explore how African knowledge is constructed and organized. Focusing on Mudimbe's *The Invention of Africa*, we explore what he refers to as "African gnosis," i.e. a term he uses to include African traditional systems of thought into what is generally denoted as African philosophy. We look into the argument in which he states that the colonizing structure has resulted in dichotomizing structures where the traditional is juxtaposed with the modern, the oral with the written, the agrarian with the urban and the subsistence economy with the highly productive economy. This, in turn, has produced marginal societies, cultures and human beings. From there we look into Africa's "deeper past" with excerpts on the African Middle Ages before we dive into the history of colonialism as well as anticolonial resistance. These two themes we investigate via sections from Saidya Hartmann's study on the transatlantic slave route as well as Rosalind Shaw's anthropological study on how the slave trade has been "forgotten" and "remembered" in Sierra Leone. Shaw examines non-verbal forms of remembering among the Temne-speaking communities in northern Sierra Leone. This is followed by exploring how movements such as Pan-Africanism and the Black consciousness movement have affected the African experience. We conclude the course by delving into contemporary political themes such as, African feminism, Queer politics and the politics of "development.". In the last three tasks we will engage with Stephen Ellis book, *Season of Rains: Africa in the World*, and Desmond Tutu's *No Future without Forgiveness,* a detailed and fascinating report on South Africa's Truth and Reconciliation Commission.

Literature

- Course readings are mostly, but not exclusively, based on African writers in-and outside of the African continent. Among the writers and scholars we read are V.Y. Mudimbe, Chinua Achebe, Saidiya Hartman, Rosalind Shaw, Desmond Tutu and Steve Biko.

Instructional format

Tutorial group meetings and lectures.

Examination

A final take home exam or research paper, participation grades and graded discussion leading.

Sciences (SCI)

SCI1001 Theory Construction and Modelling Techniques

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences & Social Sciences	No

NB: This course was formerly known as COR1005 Theory Construction and Modelling Techniques.
Students who did and passed COR1005 cannot participate in this course. For the academic year 2021-2022, students who did and failed COR1005 in the past can take this course and use it to fulfill their core (COR1005) requirement.

Prerequisite
None.

Recommended
This course provides an introduction to theorizing and modelling. It is relevant for a wide range of other courses that are offered at UCM.

Objectives
- To offer a broad overview of scientific models and modelling techniques in different disciplines.
- To teach students how to work with models in different academic fields.
- To teach students how to model a specific case study by using general models and modelling techniques.

Description of the course
The aim of the course is to familiarize students with model systems within the different disciplines of Sciences, Social Sciences, and Humanities. Modelling is an important skill for all research, irrespective of concentration or discipline. Models allow us to approach complex questions in systematic ways, for instance, by predicting weather conditions, the patterns of bird flight formations or the results of presidential elections. Such questions are present everywhere and it is through modelling that we can try to find some answers.

Modelling helps us to break down what we are studying into variables, understand relations or correlations between them and even predict the future. The course starts with a short introduction to models, followed by several case studies that illustrate their usefulness in various contexts. Exposing students to models used in both academia and every-day thinking, the course fosters a thorough understanding of natural, social, and cultural phenomena. Throughout the course, students are encouraged to link models to specific situations and examples from their daily-life. The final report allows students to use the knowledge gained in the course to analyze a case study of their own interest. This can be done by conducting thought experiments, applying and redefining existing models.

The interactive lectures help students to gain a broad understanding of different kinds of modelling techniques. A special workshop is offered in order to trigger interests, thoughts and ideas and find ways of translating them into an individual and structured academic report for all disciplines and concentrations.

Literature
- Jaccard J. and Jacoby J., Theory Construction and Model-building Skills - A Practical Guide for Social Scientists, 2nd Ed., The Guilford Press, New York, (2019).
- Additional readings are available on Student Portal.

Instructional format
Tutorial group meetings and lectures.

Examination
Assessment is based on an exam in the final week, and a written assignment, consisting of a report and two peer reviews. The exam consists of open questions.

SCI1004   Introduction to Chemistry

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

NB: This course is aimed at students who have never taken chemistry or have only taken basic level chemistry. It is strongly suggested that students who took chemistry in high school consider taking SCI2017 directly.

Prerequisite
None.

Objectives
- To teach the first principles of organic and inorganic chemistry for future students in medicine, biology and molecular life sciences, in such a way that they can apply these concepts to solve typical chemical and biomedical problems.
- To give you the ability to recognize chemical compounds and to understand their basic physical and chemical properties.
- To enable you to understand the basic physical chemistry of fundamental importance to most natural processes, such as thermodynamics, acid-base behavior, kinetics, and electrochemistry.
- To provide the basic knowledge for further advanced courses in chemistry, biochemistry and the life sciences.

Description of the course
The emphasis of this course will be on a number of essential topics in modern chemistry. The course will start with a close look at the structure of atoms and their place in the periodic table, followed by an examination of the properties of various types of chemical bonds, ending with a discussion of chemical reactivity. The topics covered in this course cover the characteristics of gases/liquids/solids, thermodynamics, reaction kinetics, acid-base chemistry, electrochemistry, and chemical bonding theory. The concepts that are learned are applied to biochemical examples. Basic knowledge of chemistry is important in a wide variety of disciplines, ranging from (life) sciences and medicine to management, economics and governance studies.

Literature
- To be announced.

Instructional format
Tutorial group meetings and lectures. The course will incorporate Problem-Based Learning (PBL) but the students will also be expected to cooperatively solve more structured learning assignments based on exercises, during tutorial sessions.

Examination
Student evaluation will be based on 1) a midterm examination, 2) a final examination, 3) the contributions to the tutorial group.

SCI1005   The Digital Enterprise

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences & Social Sciences	No

NB: The course is an introductory course to the Information Sciences curriculum, providing an overview of topics related to the use, embedding and management of information and information technology. The emphasis will be on the organizational (enterprise) context, but we will also touch upon the broader societal impact of information technologies.

Prerequisite
None.

Objectives
- To introduce students to the role of data, information and knowledge in several contexts: enterprises, but also society in general.
- To familiarize students with the background of knowledge management, its models and application.
- To introduce students to the methodologies used in developing information systems (e.g. the systems development lifecycle method versus agile methodologies).
- To introduce students to the organization and governance of data, information and knowledge.
- To introduce students to the managerial challenges associated with the use of information systems in enterprises.

Description of the course

Too often IT is viewed as the province of technocrats, a domain inhabited by technical experts with little relevance to real-world problems. And yet, the economic importance of information, information systems, and thus information management has been growing constantly over the last decades, thanks to the relentless increase in computer performance.

We are increasingly dependent on information systems and data to make decisions in a wide range of domains. Sensor and network technology helps us to collect and analyze data in real-time, and to speed up decision making in all areas of our society. The possibilities of information and computer science are endless, but they also raise concerns: for instance about privacy, security, and identity, but also about interpretation and perception of data.

All these developments have led to the present-day "digital enterprise". In digital enterprises, the creation, distribution, use, integration and manipulation of information is a significant economic activity. The digitization of enterprises also has consequences for society. People who have the means to partake in this form of society are sometimes called digital citizens. This is one of many dozen labels that have been identified to suggest that humans are entering a new phase of society. The digital society can be both a threat and an opportunity to enterprises – this is, for instance, clearly visible in sectors such as retail (traditional retailers vs Amazon & Co), accomodation (traditional hotel vs AirBNB) and transportation (traditional taxis vs Uber).

This course offers an overview of role of digital concepts in enterprises: the digital enterprise. The course provides both a theoretical grounding and a pragmatic approach to applying key concepts. Drawing on ideas, tools, and techniques from such disciplines as economics, sociology, cognitive science, organizational behavior, and computer science, the course shows the digital enterprise from different perspectives: its position in society and the market, but also elements such as governance, information technology, and people. The course serves as an introduction to other Information and Computer Science courses, in which the various topics of the Digital Enterprise will be discussed in more detail.

Literature
- E-Reader

Instructional format
Tutorial group meetings and lectures.

Examination
During the course the students make several small assignments. Theoretical aspects of the course are applied and concepts are translated to practical usability. In addition to that, students do a group assignment, including a presentation, and write an individual paper about a topic that is relevant for the course**.**

SCI1009   Introduction to Biology

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	Yes

NB: This course is aimed at students who have only taken basic level biology. It is strongly suggested that students with substantial high school experience in biology consider taking relevant 2000-level courses directly (for an indication of the relevant topics, see SCI-B,). However, the content of this course does go beyond high school biology end level. It is possible to take this course without having previously taken biology, but it will be challenging.

Prerequisite
None.

Objectives
- To provide students with a good basic knowledge required to enter more specialised courses in life sciences.
- To gain insight in the biology of organisms.
- To increase appreciation and knowledge of the science of life.

Description of the course
Biology, the science of life, studies organisms as the basic units of life. How they are evolved, how they are build up, how they act, how they communicate with each other, how they are related to the non-living environment, and how they reproduce. Since organisms are built up of cells, the basic unity of all life forms, the course will start with biomolecules and reactions that enable life, followed by tasks about organelles, cells, DNA and the protein machinery that results in the diversity of cells. We will continue with cell growth and differentiation, metabolism and reproduction. Towards the end of the course, we will go into organ systems and evolutionary mechanisms that ultimately provide the biodiversity on planet Earth.

Literature
- Campbell et al., *Biology, a global appraoch*, 11th edition, 2018.
- Sadava et al., *Life, the science of biology*, 11th edition, 2016.

Instructional format
Lectures and tutorial group meetings.

Examination
Assessment will be based on 1) an exam in the final week, consisting of open questions and 2) a presentation, in small groups, on a selected biology topic.

SCI1010 Basic Mathematical Tools

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences & Social Sciences	Yes

NB: This course is aimed at students who have only taken basic level Mathematics in High School. Although the level of high school mathematics required for this course is basic, the pace of this course exceeds high school levels. Further, the course topics cover, but also digress beyond high school mathematics. Thus, since the emphasis of this course is on computational rather than conceptual issues, students that take this course are required to have at least some affinity with quantitative skills and application of mathematical techniques. Students who are not sure whether this course is appropriate for them are welcome to contact the course coordinator. It is strongly suggested that students who have taken the highest level of mathematics in high school consider taking relevant 2000-level courses directly.

Prerequisite
None.

Objectives
- To provide students with a thorough mathematical basic toolbox.
- To train students in computation and analytic reasoning.
- To demonstrate why mathematics is extremely useful in many disciplines.
- To prepare students for more advanced courses in mathematics.

Description of the course
Students learn to analyze mathematical problems from various fields in mathematics, such as analysis, algebra, and probability theory. Thus, students are trained to model and solve quantitative problems from a wide variety of disciplines.

The course is intended in particular for students with only a limited mathematical background from pre-university education that need to refresh their skills in mathematics and calculus. The first three weeks recap topics that are already covered in secondary school. The remaining weeks cover more advanced topics to prepare students for further quantitative courses.

The course guides students through a wide variety of topics in mathematics and its applications. Topics range through solving equations and inequalities, techniques for differentiation, function analysis, probability theory, geometry and approximation techniques.

Literature
- *E-Reader*.

Instructional format
Tutorial group meetings and lectures.

Examination
Written exam and presentation of homework assignments in class.

SCI1016   Sustainable Development: An Introduction

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences & Social Sciences	No

Prerequisite
None.

Objectives
- To gain a basic understanding of the (various perspectives on the) concept of sustainable development and some of the main related ideas, concepts and theories.
- To gain insights into (the limits to) our immense global human impact on the earth's systems and the underlying drivers of these unsustainable trends
- To explore ideas about how to achieve a more sustainable society.

Description of the course
Today it is acknowledged that achieving sustainable development at the local, regional and global scale is one of the greatest challenges for the 21st century. But in many cases the term 'sustainable development' functions as little more than a vacuous buzzword. So what does sustainable development actually mean? How unsustainable is our global society at the moment? Are we contributing to irreversible climate change? Are we already passing dangerous global environmental tipping points? Why are humans acting in such unsustainable ways? And, of course, what are sustainable ways forward?

This course aims to enhance student's understanding of 'sustainable development', based on the notion that human development can only be sustainable when environmental boundaries are respected. The course introduces the main concepts, ideas and theories related to the term sustainable development. Students will gain insights into (the limits to) humanity's immense impact on the earth's systems and the underlying drivers of these unsustainable trends. Furthermore, sustainable development requires an understanding that inaction has consequences. Students will explore ideas about how to achieve a more sustainable society. As part of the examination students will link theories/concepts/ideas discussed in the course to a self-selected case study (a promising way forward towards sustainability) in a poster presentation.

Literature
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
Practical assignment (poster presentation) and written exams.

SCI2002   *Discrete Mathematics*

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	No

Prerequisites

Substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Objectives

- To make students familiar with several fundamental concepts in mathematics, a.o.numbers, logic, proofs, sets, relations, functions and combinatorics (see description).
- To get the students to notice how beautiful the world of mathematics is.

Description of the course

The students will learn the what the following fundamental concepts involve:

1. Numbers: We discuss a.o. integers, natural numbers, real numbers and prime numbers and properties that these classes of numbers have;
2. Logic: This involves drawing (correct!) conclusions and how to use logic to prove mathematical statements.
3. Sets: A set is nothing more than a collection of items. Often those items will be numbers, but this is not necessarily the case. We discuss properties of sets and concepts related to sets, like intersections, and unions;
4. (Mathematical) relations: A relation is essentially a comparing mechanism for elements in a set. E.g. 'smaller than'. We discuss several relations and their properties;
5. Functions: A function is a mapping from one set to another. We discuss several properties that functions may have, like invertibility;
6. Combinatorics, the science of 'smart counting': The question is 'In how many ways…', the answer will often be a big number and we discuss how to find them quickly. For this purpose we use concepts like permutations and combinations.

Almost every time mathematics is used, it concerns some of the above concepts. A good understanding of these topics is therefore very important and Discrete Mathematics is a perfect course to combine with other mathematics courses. Hence, students who are interested in (applied) mathematics, computer science and/or econometrics might find this course particularly useful.

Literature

- Chetwynd, A., & Diggle, P. *Discrete Mathematics*.
- Lecture notes will be provided via Student Portal.

Instructional format

Frontal, but interactive instruction and active training in comprehending the instructed material by spending a lot of time on problem solving, either individually or jointly with other participants. There are no tutor groups for this course. During all contact hours instruction and practice will alternate in line with the progress of the material in the book/lecture notes.

Examination

Two written exams (one midterm and a final exam).

SCI2009   Human Physiology

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences	No

This course is designed to be taken in combination with SKI2079 Lab Skills: Human Anatomy and Histology. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2009 Human Physiology without taking the Lab Skills may do so.

Prerequisites
SCI1009 Introduction to Biology. Students with substantial high school experience in Biology (For an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

Objective
- To obtain basic knowledge of human physiology.

Course Description
While Mathematics is seen as the father of science, Physiology is the mother. Physiology attempts to explain the physical and chemical factors that are responsible for the origin, development, and progression of life. Human physiology investigates the mechanisms of the human body making it a living being (Guyton). In the healthy human body it is of the utmost importance that the working conditions for all cells are kept "constant". In this respect it is noteworthy that essentially all organs and cells of the human body perform functions that help to maintain this constant nature or homeostasis by using feed-back mechanisms. We will begin by discussing the physiology of the cell, and the function of the cell membrane. Continuing, we will discuss cardiovascular physiology, respiratory, fluid and salt balance, followed by the autonomic nervous system and the endocrine system and ending with gastrointestinal physiology, control and feedback.

Literature
Multiple sources provided by UM/UCM libraries including textbooks on:
Physiology, Biochemistry, Physics, Pathology, Internal Medicine, etc. The use of the on-line library Access Medicine, and Clinical Key (access provided by UB).

Instructional format
Lectures and tutorial group meetings.

Examination
Written exam and a presentation on a physiological subject of choice.

SCI2010   *Introduction to Game Theory*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	No

Prerequisites

SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Objective
- To familiarize the students with the fundamentals of Game Theory.

Description of the course

What is a game?

The word game may make you think of things like poker, chess or backgammon. However, within the context of this course its meaning is far broader. A game is basically a decision problem in which several parties are involved. Generally these parties have different and conflicting interests, and often there is no solution to the decision problem that will make all parties happy. The parties in the conflict are normally called players (or agents), but one should keep in mind that these may just as well be firms competing for their market shares, animals fighting over a territory, children trying to get the biggest piece of cake, or politicians fighting over the distribution of budgets. We encounter very fundamental issues like rationality, expectations, fairness, power, cooperation, threats, manipulations, risk, stability. In some games everything depends on strategic possibilities of the players. In such games we also encounter information structures; what does each player know about the other player's possibilities and goals. Does A know that B knows that A knows that B knows etc?

Game Theory analyzes different types of games and their solution concepts. Analyzing, or solving, a game boils down to answering a *mathematical* question and then interpreting the result.

In the games that we discuss in the Game Theory course the solution depends on strategic possibilities of the players. We will discuss the games in order of increasing strategic possibilities, which means that as the course progresses, the games become more complex. Many examples shall be discussed to clarify the issues and many exercises will be provided to learn how to compute solutions.

Literature
- Lecture Notes *Introduction to Game Theory* by Frank Thuijsman will be provided.

Instructional format

Frontal, but interactive instruction and active training in comprehending the instructed material by spending a lot of time on problem solving, either individually or jointly with other participants. There are no tutorial groups for this course. During all contact hours instruction and practice will alternate in line with the progress of the material in the lecture notes.

Examination

There will be two written exams (one midterm and one final exam) that consists of solving a number of "open" problems.

SCI2011 Introduction to Programming

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	No

Prerequisites

Abstract thinking ability. Basic math knowledge is assumed. No prior programming experience is required; recommended: SCI2039 Computer Science.

Objectives

- Identify, interpret and apply fundamentals of programming & object-oriented design.
- Give examples of important topics and principles of software development.
- Point out obvious mistakes in programs and analyze how they run.
- Design, compose and evaluate programs that solve specific problems.
- Use a software development environment (IntelliJ) to create, debug, and run programs.

Description of the course

This course is an intensive introduction to programming in Java that assumes no prior programming experience. It explores all aspects of modern programming by means of lectures and hands-on practical lab sessions.

The course starts with the basics of computer science and computer programming. After a short introduction to computer organization, the principles of structured programming in Java are presented. Main topics covered are: data types and variables, methods, conditional statements, loops, recursion. Finally, the course introduces the object-oriented features of Java and their usage for program design. All these concepts have to be understood both from their theoretical perspective and their practical applications.

Literature

- David J. Eck, *Introduction to Programming Using Java*, Sixth Edition, 2011. http://math.hws.edu/javanotes/ (DJE).

Instructional format

Lectures, tutorials and lab sessions. During lectures students will be instructed in the basics of programming via slides. Tutorials take place after the lecture and provide the necessary practical experience and insights on how to apply the knowledge acquired during the lecture, including solving a short problems using methods learned in the lecture. Tutorials along with the assignments influence the final grade (see `Examination').

Examination

Practical part (Six tutorials (20%), Three assignments (30%)): Assignments will be announced during the period and need to be handed-in individually.
Final exam (50%): An open book and notes, open-questions exam at the end of the course.

SCI2017   Organic Chemistry

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	Yes

Note: Please be aware that this course is jointly offered together with MSP. This might imply that classes will take place in the MSP building, and that the course is displayed under an MSP course code in your schedule and on Student Portal. On your transcript and your grade list the course will be displayed with the regular UCM course code.

Prerequisite
SCI1004 Introduction to Chemistry or CHE1001 Introduction to Natural Sciences: Chemistry

Objectives
- To give the ability to recognize and name common organic compounds.
- To know the basic physical and chemical properties of common organic compounds.
- To understand stereochemistry and its impact on the properties and applications of organic molecules.
- To enable you to understand the most important organic reactions and be able to apply these reactions to obtain well defined organic compounds.

Description of the course
This course focuses on the basis of organic chemistry. In the first part of the course, important fundamental topics, such as atomic theory, bonding theory, hybridization, molecular orbital theory and resonance will be discussed. A special topic will be stereochemistry, which is an essential topic in organic chemistry and the life sciences, since stereochemistry often determines the activity of biological compounds or medicines. Subsequently, the course continues with an introduction into reactivity of organic molecules. Focus, will be on a selection of fundamental organic reactions, which form the basis for a wide array of other organic reactions. To this end, a logical review will be provided of the reactivity of the most important functional groups, as applied in organic synthesis.

Literature
- Klein; "Organic Chemistry"; 2th edition or 3rd edition; Wiley (ISBN: 9781118452288/978-1119110477).

Instructional format
Lectures and tutorial group meetings. Problem-Based Learning (PBL) assignments will be supplemented with more structured learning assignments based on exercises, which can be found in the textbook.

Examination
A midterm examination, which consists of multiple choice questions; a final examination, which consists of open questions; the contributions to the tutorial group meetings.

SCI2018   Calculus

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Prerequisite

SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Objective

- In this course we provide an introduction to calculus. Emphasis is on an understanding of the basic concepts and techniques, and on developing the practical, computational skills to solve problems from a wide range of application areas.

Description of the course

Students enter this course with a wide variety of backgrounds. For some students who have previously seen very little calculus there will be many new techniques introduced, whereas for other students with a broader prior experience some of the techniques will be familiar. Throughout the course we will illustrate the methods learnt by looking at real problems from different fields where these techniques can be applied and through this applied lens all students will explore new facets of calculus and deepen their knowledge.
The course will discuss;

- Functions
- Limits and continuity
- Derivatives
- Rules of differentiation
- Maxima and Minima
- Implicit differentiation and related rates
- Integration
- Definite integrals
- Applications of integration
- Improper integrals
- Differential Equations

Literature

- Waner, S and Costenoble, S.R. (2014). *Applied Calculus, 6th edition, international edition.* Brooks/Cole, Cenage learning.

Instructional format

Weekly lectures and twice-weekly problem classes. The lectures will present the topics to be covered in the next week's problem classes. The problem classes will review set questions on each of these topics, as well as allowing students time to ask further questions and explore together difficult aspects of the course.

Examination

Two coursework assignments, participation grade and a final exam.

SCI2019   Linear Algebra

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences	No

Prerequisite
SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Objective
- To provide an introduction to the main topics of linear algebra. The emphasis is on an understanding of the basic concepts and techniques, and on developing the practical, computational skills to solve problems from a wide range of application areas.

Description of the course
Linear algebra is the branch of mathematics which is primarily concerned with problems involving linearity of one kind or another. This is reflected by the three main themes around which this introductory course is centered.

The first theme concerns what can be recognized without doubt as the most frequently occurring mathematical problem in practical applications: how to solve a system of linear equations. For this problem a complete solution procedure is developed which provides the student with a way to deal with such problems systematically, regardless of the number of equations or the number of unknowns.

The second theme addresses linear functions and mappings, which can be studied naturally from a geometric point of view. This involves geometric 'primitives' such as points, lines and planes, and geometric 'actions' such as rotation, reflection, projection and translation.
One of the main tools of linear algebra is offered by matrices and vectors, for which a basic theory of matrix-vector computation is developed. This allows one to bring these two themes together in a common, exceptionally fruitful, framework. By introducing the notions of vector spaces, inner products, and orthogonality, a deeper understanding of the scope of these techniques is developed, opening up a large array of rather diverse application areas.

The third theme arises when the point of view is shifted once more, now from the geometric point of view to the dynamic perspective, where the focus is on the effects of iteration (i.e., the repeated application of a linear mapping). This involves a basic theory of eigenvalues and eigenvectors, which has many applications in various branches of science as will be discussed. For instance, important applications can be found in problems involving dynamics and stability, and applications to optimization problems found in operations research.

Many examples and exercises shall be provided to clarify the issues and to develop practical computational skills. They also serve to demonstrate practical applications where the results of this course can be successfully employed.

Students will obtain the insight that various seemingly different questions can all boil down to the same mathematical problem of solving a system of equations. Students will learn to look at the same problem from different angles and will learn to switch their point of view (from geometric to algebraic and vice versa).

Literature
- David C. Lay, Steven R. Lay, Judi J. McDonald, (2016), Linear Algebra and its Applications, 5th ed., Pearson, ISBN 978-1-292-09223-2.

Instructional format
A combination of interactive frontal instruction and active training. Students will be guided in comprehending the material by spending a considerable amount of time on problem solving, either individually or jointly with other participants.

Examination
There will be two written tests on parts of the course that consists of solving a number of open problems.

Inspection hour:
The course coordinator will organize an inspection hour after each exam component (midterm exam, final exam and resit).

SCI2022   Genetics and Evolution

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	Yes

This course is designed to be taken in combination with SKI2088 Lab Skills: Genetics. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2022 Genetics and Evolution I without taking the Lab Skills may do so.

Prerequisite
SCI1009 Introduction to Biology. Students with substantial high school experience in Biology (For an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

Objectives
- To acquaint students with genetics and evolutionary theory.
- To provide students with insight into the essentials of genetic and evolutionary models and their applications in biology, medicine and psychology.

Description of the course
Within the life sciences there are two kinds of theories that deal with phenomena: proximate-causal theories and ultimate causal theories. Molecular genetics is indispensable for understanding the proximate causation of phenomena. It explains how genetics information, encoded in the DNA, is transcribed and translated into molecules that are involved in the development of characteristics (phenotypes) of an individual. Evolutionary theory tries to solve problems related to the ultimate causation of phenomena. Why have specific genotypes been selected through selection on phenotypes? Its core discipline is evolutionary genetics. Genetics and evolutionary theory will be discussed in this course.

The course starts with the mechanisms that cause evolutionary change: natural selection, inheritance, and gene expression. In order to make these mechanisms understandable for students, this course will deal with the essentials of molecular, Mendel, and population genetics. It then moves on to the evolution of life cycles, sex, and sexual selection. After discussing kin selection it uses genomic imprinting to explain genetic conflicts. Game theory will be used to explain the models that treat conflicts. The course will finish with the evolution of life histories, especially senescence.

Besides theoretical and mathematical models, the course will treat the applications of these models within the fields of biology, medicine, and psychology. For example sexual selection will be used to explain the principles of partner selection in human beings (psychology), kin selection will be treated in the context of conflicts between paternal and maternal alleles during pregnancies (medicine), and the evolution of sex will be treated in relation to rates of mutation and recombination (biology).

Literature
- Stearns, S.C. & Hoekstra, R.F. (2005) *Evolution; An introduction* (2nd ed.). Oxford University Press, Oxford.
- Alberts, D. & Johnson, A. (2007) Molecular Biology of the cell, fourth, fifth or sixth edition.

Instructional format
Tutorial group meetings and lectures.

Examination
An essay during the course, on topics chosen from a list to be distributed at the start. Deadline is in week 7. A test with open questions at the end of the course.

SCI2031   Immunology

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences	Yes

Prerequisite

SCI1009 Introduction to Biology. Students with substantial high school experience in biology (for an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinators to request a waiver.

Recommended

SCI2037 Cell Biology, SCI2040 Microbiology.

Objectives

- To gain knowledge and insight in cells and humoral factors of the innate and adaptive immune system.
- To gain knowledge and insight in cellular and molecular effector mechanisms of the innate and adaptive immunity during inflammation and infection.
- To gain knowledge and insight in the structure and function of primary and secondary lymphoid tissue.
- To gain knowledge and insight in the processes in the immune response after immunization and vaccination.
- To gain knowledge and insight in immune mechanisms in disease.

Description

The course Immunology focuses on the role of different humoral factors, cells and cell systems of the innate and adaptive immune system, that are involved in the defense of an organism against intruders like foreign cells or (non) complex structures (e.g. foreign proteins). In addition, the processes in the immune response after immunization, vaccination and transplantation will be discussed.

Literature

- Abbas, A.K., Lichtman A.H. and Pillai, S. (2019). Basic Immunology (6th ed.). Philadelphia: Elsevier.

Instructional format

Tutorial group meetings, lectures, and self-study assignments.

Examination

Student evaluation will be based on 1) a written test, and 2) a presentation (in small groups) on an immunologic topic.

SCI2033   Datamining

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	No

Prerequisites

SCI2039 Computer Science or SCI2011 Introduction to Programming and SSC2061 Statistics I.

Objectives

- To provide an introduction to the fundamental concepts found throughout the field of data mining.
- To provide a practical experience of applying data-mining techniques for analyzing data and deriving new knowledge.

Description of the course

Data mining is a relatively new scientific field that enables finding interesting knowledge from (very large) data. In practice it is often a mixed-initiative process that has the potential to predict events or to analyze them in retrospect. Data mining has elements of artificial intelligence, machine learning, and statistics.

A typical database contains data, information or even knowledge if the appropriate queries are submitted and answered. The situation changes if you have to analyze large databases with many variables. Elementary database queries and standard statistical analysis are not sufficient to answer your information need. Your intuition guides you to understand that the database contains more knowledge on a specific topic that you would like to know explicitly. Data mining can assist you in acquiring this knowledge. The course shows you within two months how this works. You will learn new techniques, new methods, and tools of data mining. The course focuses on techniques with a direct practical use. A step-by-step introduction to powerful (freeware) data-mining tools will enable you to achieve specific skills, autonomy and hands-on experience. A number of real data sets will be analyzed and discussed. In the end of the course you will be able to apply data-mining techniques for research and business purposes.

The following points will be addressed during the course:

* Data Mining and Knowledge Discovery
* Data Preparation
* Basic Techniques for Data Mining:

- Decision-Tree Induction
- Rule Induction
- Instance-Based Learning
- Bayesian Learning
- Ensemble Techniques
- Clustering
- Association Rules
- Tools for Data Mining
- How to Interpret and Evaluate Data-Mining Results

Literature

- Mitchell, T. (1997). *Machine Learning*. McGraw Hill. ISBN 0070428077.

Instructional format

Lectures and practical lab sessions.

Examination

Weekly assignments, an open-question test at the end of the course.

SCI2034   Functional Neuroanatomy

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Prerequisite

Secondary school biology (for an indication of the relevant topics, see SCI-B, p. vi-viii) and/or a genuine(!) interest in the anatomy of the nervous system.

Objectives
- To make students familiar with the basic division, anatomy and functions of the central and peripheral nervous system.
- To gain knowledge of the workings and anatomy of the brain's most important structures.
- To gain basic practical knowledge of brain dissection.
- To learn about the association between our modern lifestyle and nervous system and human health.

Description of the course

Human beings mostly go through their lives without paying much attention to their actions such as breathing, eating and even learning. Our nervous systems seems to take care of us in an almost effortless way by planning, initiating and executing our actions and by regulating our somatic homeostasis. The course Functional Neuroanatomy is concerned with exactly how the nervous system does so. The course deals with the scientific study of the central and peripheral nervous system as well as with some of the latest developments in neuroscience. Furthermore, the knowledge acquired during the course prepares the students for more adavnces neuroscience courses, e.g. Cognitive Neuroscience. Via problem based learning tasks, both the anatomy and functions of important neurological structures like the spinal cord and the brain are discussed. In addition, some of the effects our current life-styles (e.g. listening to relatively loud music by use of inner-ear headphones) have on the structure and function of the nervous system are examined by reading some research articles on this topic.

Literature
- Bear, M.F., (2016). *Neuroscience: Exploring the brain* (4th ed.), ISBN: 9780781760034.
- Various textbooks on the anatomy of the brain (available in UM library and UCM reading room).
- Several research articles on the relationship between modern lifestyle and nervous system anatomy and functioning.

Instructional format

Tutorial group meetings, lectures and practical.

Examination

Practical attendance (fail/pass), a paper and an exam.

SCI2035   Biochemistry

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Note: Please be aware that this course is jointly offered together with MSP. This might imply that classes will take place in the MSP building, and that the course is displayed under an MSP course code in your schedule and on Student Portal. On your transcript and your grade list the course will be displayed with the regular UCM course code.

This course is designed to be taken in combination with SKI2086 Lab Skills: Biochemistry. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2035 Biochemistry without taking the Lab Skills may do so.

Prerequisites

SCI1009 Introduction to Biology or SCI1004 Introduction to Chemistry. Students with substantial high school experience in Biology or Chemistry (For an indication of the relevant topics, see SCI-B and SCI-C, p. vi-viii) can contact the coordinator to request a waiver.

Objectives

- To communicate fundamental principles governing structure, function and interactions of biological molecules to students encountering biochemistry for the first time.
- To increase appreciation of the science of biochemistry and its relevance to Health and Disease .
- To study the roles of bio-macromolecules like proteins, lipids, polysaccharides and nucleotides in living cells in the context of diseases such as hyperventilation, thrombosis and obesitas.
- To create deeper understanding of the basic principles of enzyme catalysis and inhibition.
- To prepare students to enter advanced courses that require more detailed biochemistry knowledge, and to finally allow entrance to various Master programs in the life sciences.

Description of the course

Biochemistry is considered the mother of all Life Sciences. Understanding Biochemistry will facilitate learning of more specialised Life Sciences such as Molecular and Cell Biology.

This course will present the essentials of Biochemistry during 6 lectures and 10 tutorials. We will cover the structures, functions and interactions of the biomacromolecules, including proteins, lipids, carbohydrates, DNA and RNA, which perform many of the activities associated with life. We will provide insight in the specificity and action of enzymes, the biocatalysts of the cell. Further, we will explain metabolic pathways that result in the generation of ATP, the major energy currency of the cell.

Finally we will present recent biochemical understandings on genome editing that revolutionize treatment of diseases at the level of correcting mutated genes (gene therapy).

Literature

- Berg, J.M., Tymoczko, J.L., Stryer, L. *Biochemistry*. (8th ed). W.H. Freeman. ISBN-10: 1-4641-2610-0; ISBN-13: 978-1-4641-2610-9
- Pratt, C.W. and Cornely, K. *Essential Biochemistry* (4th ed.) John Wiley & Sons. ISBN978-1-119-45112-9
- Garrett and Grisham. *Biochemistry.* (4th ed.). Thomson Brooks/Cole. ISBN101133108792 ISBN13 978-1133108795.

Instructional format

Lectures and tutorial groups. The course is subdivided into subjects, and for each subject lectures will be given on the basis of observed deficiencies.

Examination

A written midterm and final examination (open and multiple choice questions).

SCI2036   Artificial Intelligence

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Prerequisite

None.

Objectives

- To convey the ideas that have emerged over the past fifty years of Artificial Intelligence research, and about two millenia of related work.
- To discuss the possibility of machines that think.
- To show how algorithms can be used to enable systems to think or act intelligently and to discuss state-of-the-art advances in the Artificial Intelligence community.

Description of the course

The course starts with an introduction to artificial intelligence and an explanation of algorithms that allow agents to search for optimal solutions in complicated environments. Also, algorithms and problems related to artificial intelligence and games, neural networks basics, but also the emerging field of computer vision are introduced and discussed. Towards the end of the course, a lecture regarding artificial intelligence and related ethics takes place, allowing students to see how computational techniques relate to handling biases and misconceptions.

The main part of the course explores the metaphor of an intelligent agent by introducing a number of state-of-the-art concepts, algorithms, and methods which enable computers (i.e., software and robots) to solve problems in a way which deserves to be called intelligent. Covered topics are explored and applied in exercises and tasks (mainly in-class, but also as homework).

Literature

- Russell, S., & Norvig, P. (2009, Third Edition). *Artificial Intelligence. A modern approach*. Prentice-Hall.

Instructional format

Lectures and practicals (exercises and tasks). Computer programming skills are neither required nor taught in this course.

Examination

Two assignments: Mid-term and final. Attendance in lecture sessions and practicals is mandatory.

SCI2037   Cell Biology

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	No

This course is designed to be taken in combination with SKI2077 Lab Skills: Cell Biology. Students wishing to take the Lab Skills should concurrently enroll in or have completed this course. Students wishing to take SCI2037 Cell Biology without taking the Lab Skills may do so.

Prerequisites
SCI1009 Introduction to Biology. Students with substantial high school experience in biology (for an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

Objective
- To obtain insight in basic molecular genetic and cell biological processes in cells, tissues and organisms by leading the student through the origin of life, its differentiation and diversification, and deregulation of molecular processes leading to disease.

Description of the course
In this course students have an opportunity to get acquainted with the discipline of cell biology. This discipline has been profiting from the development and improvements of recombinant DNA technology and is a driving force in fundamental and biomedical research. In this course students are challenged to discuss, at a detailed molecular level, different cellular and genetic processes that are the basis of life as we know it. The aim of the course is to familiarize students with further knowledge in the field of cell biology, which will enable them to better understand and appreciate the newest developments in this research area. Discussions will revolve around general cell biological topics such as the role of membranes, membrane transport of small molecules, the nuclear architecture, the organization of the genome, regulation of transcription and translation, protein trafficking, the cell cycle and maintenance of genomic integrity, programmed cell death and senescence. The last task, dealing with cancer, serves as an integration task; knowledge of the previous topics is required to appreciate what the consequences can be when a cell goes astray and the defence mechanisms of the body fail.

Literature
- Alberts et al., *Molecular Biology of the Cell*, 6th edition, 2014.
- Sadava et al., *Life, the science of biology*, 10th edition, 2012.
- Scientific publications provided during the course.

Instructional format
Tutorial group meetings and lectures.

Examination
Assessment will be based on 1) a written exam consisting of open questions, 2) a written assignment and 3) a presentation on the topic of the paper.

SCI2039   Computer Science

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences	No

Prerequisite
None.

Objective
- To provide an introduction to the fundamental concepts found throughout the field of informatics and computer science.

Description of the course
As an overview of the discipline, the course covers a breadth of topics including algorithmic foundations of informatics; hardware issues such as number systems and computer architectures; and software issues such as operating systems, programming languages, compilers, networks, the Internet, and artificial intelligence.

All the concepts introduced during the course are investigated in lab sessions. In the end of the course students are expected to develop experience in how to apply techniques from informatics, computer science and programming for their own research and educational purposes.

Literature
- Schneider, G.M. & Gersting, J.L. (2013, Sixth Edition). *An Invitation to Computer Science*: Java Version. Thomson Pub Co. ISBN-978113319108

Instructional format
Lectures and practical lab sessions.

Examination
Weekly lab assignments and a closed-book test with open questions at the end of the course.

SCI2040   Microbiology

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	No

Prerequisites
SCI1009 Introduction to Biology.

Objectives
- To obtain basic knowledge of microbiology, i.e. of bacteriology, virology and environmental and applied microbiology.
- To study the characteristics of a selection of micro-organisms in relation to their related infectious diseases, more specific pathogenesis, immunity, epidemiology, diagnosis and therapy.
- To study the epidemiology of infectious diseases in relation to outbreaks, outbreak management and prevention
- To study environmental microbiology by looking at the role micro-organisms play in our environment and how micro-organisms can be used to our advantage.

Description of the course
The 7 weeks course will be divided into 4 parts:
Bacteriology (3 weeks):
1) Introduction in bacteriology. General principles of replication, classification and identification of bacteria will be adressed. Presence of bacteria in humans, animals and plants and composition of the endogenous flora will be discussed. These items will be discussed in an introduction lecture, expert meeting and 2 obligatory practical sessions.
2) Bacterial infections, including adhesion, virulence, biofilms and antimicrobial resistance: This part will be discussed in a lecture and in PBL tutorial meetings. The acquisition of antimicrobial resistance and the epidemiology of worldwide antimicrobial resistance will be discussed. In addition, new approaches for treatment of antimicrobial resistant bacteria, such as phage therapy, will be discussed
Virology (2 weeks):
1) Introduction in virology. General principals of replication, classification and pathogenesis of viruses and classes antivirals will be discussed in the introduction lecture.
2) Viral infections: The second part will consist of 2 topics and will be discussed in PBL approach. Topics to be discussed are influenza and HIV. The unique characteristics of the structure of these viruses and its importance for epidemiology. The lecture on epidemiology and outbreaks will also focus on outbreaks of virla pathogens and highlight the difference with outbreak of bacterial pathogens
3) The host response to infection, and prevention of infection by vaccination will be discussed in a lectureand during the PBL sessions.
Epidemiology of infectious diseases and outbreak management (1 week)
1) Introduction in epidemiology of infectious disease. General principals of transmission, latency and infectiveness will be discussed in a lecture and during PBL sessions.
2) The basic principles of outbreak management, the use of epidemic curves of disease for outbreak management and prevention of the spread of infectious diseases will be the focus of a lecture and PBL sessions.
Environmental and Applied Microbiology (1 week)
1) Introduction in the role of microbes in the environment. The role of microbes in biogeochemical cyles, such as the carbon and nitrogen cylces, in the environment and adaptation to the environment, as well as the use of micro-organisms as biosensors, in food-production, waste treatment and bioremediation will be discussed in a lecture and and during PBL sessions.

Literature

The books recommended will only provide a basic knowledge of the topics, the students are encouraged to find scientific literature online for detailed study on the topics.

- Murray. *Medical Microbiology*. (7th ed.)
- Tortora. *Microbiology: an introduction* (8th ed.)
- (Review) scientific articles, mentioned in the course manual.

Instructional format

Two practical sessions, expert meeting, tutorial group meetings and lectures. Halfway through the course the students will prepare a 15 min presentation on a contemporary microbiological subject of their choice, which will be presented during a mini symposium.

Examination

The final grade will be decided by a combination of the grades of the final written exam and the minisymposium presentation. Furthermore, professional behaviour (participation in PBL meetings) will be part of the evaluation.

SCI2041   Climate Change

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences & Social Sciences	No

Prerequisite
SCI1016 Sustainable Development.

Objectives
- To explore historic, current and future changes in our climate system.
- To review the uncertainties underlying (the modeling of) future climate change
- To examine some key impacts of climate change on human societies and natural systems.
- To explore climate mitigation and climate adaptation strategies (incl. Paris Agreement).

Description of the course
Does it infuriate you when people consider the greenhouse effect to be a bad phenomenon? Do you know your 'RCP2.6' from your 'RCP8.5'? How about the relative importance of carbon dioxide and methane in terms of radiative forcing? No? Join the club. Very few people understand the nuts and blots of climate science. And that is a real shame, because climate change is considered to be the greatest environmental threat humanity has ever faced. The Intergovernmental Panel on Climate Change (IPCC) states that the human influence on the climate system is clear. Continued emissions of greenhouse gases will cause further warming and changes in all components of the climate system. Limiting climate change will require substantial and sustained reductions of greenhouse gas emissions, while the need for adaptation to this new reality is increasingly being recognized. The course will provide students with a sound understanding of the key drivers and processes of climate change. We will discuss the state-of-the-art climate science, examine some key impacts of (future) climate change, and explore what can be done to address the problem.

Literature
- E-Readers.
- Textbook: t.b.d

Instructional format
Tutorial group meetings and lectures.

Examination
Written exams and group assignment.

SCI2042　Infectious Diseases and Global Public Health

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	No

Prerequisite

SCI1009 Introduction to Biology or students with high school experience in biology (see SCI-B. Checklist for Biology in the catalogue).

Objectives

Upon successful completion of this course, students should be able to:

- Understand the differences between bacteria, viruses, and parasites that cause diseases.
- Understand the functions of the human immune system in protecting against diseases.
- Understand the fundamental concepts of infectious diseases epidemiology as used in public health practice.
- Identify what is in the vaccine and how it works.
- Explain the social determinants of infectious diseases.
- Explore the "One Health" concept in AMR and zoonotic disease responses.
- Develop expertise about one specific infectious disease.
- Work effectively in collaborative groups.

Description of the course

This course studies infectious diseases in a multidisciplinary way with a global public health emphasis. The first part of this course will introduce some basic knowledge on the disease processes and the human immune responses. Following the introductory components, the second part of the course will focus on three types of viruses that cause zoonotic/infectious diseases in the modern era: retroviruses (i.e., HIV/AIDS), influenza viruses (i.e., H5N1, H1N1, H7N9), and coronaviruses (i.e., SARS, MERS, COVID-19). The focus of the discussion will be on the biology of host-pathogen interactions, the basic epidemiology of infectious diseases, and possible counter-measures, including disease surveillance and vaccine development. Cutting across these cases, we will also look into the importance of social determinants of infectious diseases. The global impact of antimicrobial resistance (AMR) will be explored in the third part of the course. Factors affecting drug use, both on macro and micro levels, will be discussed and analysed. We will wrap up the course by highlighting the "One Health" concept (i.e., human-animal-environment interfaces) in responding to zoonotic diseases and AMR.

Literature

- Heymann, David L. (2014). Control of Communicable Diseases Manual (20th Edition).
- Nelson, K. E. and C. M. Williams (eds.) (2014). Infectious Disease Epidemiology: Theory and Practice (3rd Edition).

Instructional format

Tutorial group meetings and lectures.

Examination

Group presentation, individual paper and final exam.

SCI3003   Optimization

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	No

Prerequisites
SCI2018 Calculus and SCI2019 Linear Algebra.

Objective
- To become familiar with the basic concepts and methods of optimization.
- To understand how techniques from calculus and linear algebra are useful for optimization.
- To become familiar with a diversity of optimization problems and solution techniques.
- To be able to cast certain real-world problems into the form of optimization problems.
- To be able to solve certain optimization problems with software (Matlab).

Description of the course
In everyday life we are surrounded with applications of optimization. A common drive of human activity is to make things better, to enhance performance, and to carry out the best possible actions in given situations. Often the essentials of a situation can be captured by a mathematical description (a model, with or without constraints) and the value of a proposed action by a function (an optimization criterion). Then the goal becomes to optimize the criterion for the given model under the associated constraints (if any). Depending on the nature of the model, the constraints, and the optimization function, many different mathematical techniques are available to characterize and compute optima. In this course we address the most important areas in optimization and we study the most common techniques.

First, we consider the optimization of unconstrained continuous functions in several variables. Some notions we will come across are: partial derivatives; the gradient and the Hessian; stationary points; minima, maxima and saddle points; local and global optima. Techniques to compute optima range from analytical and algebraic techniques (i.e., solving systems of equations) to iterative and approximate numerical techniques (e.g., gradient methods and hill climbing, Newton and quasi-Newton methods, and several others). We will focus on a selection of these. An important class of functions to consider is that of least squares criteria. We will consider both linear and nonlinear least squares problems and suitable iterative techniques to solve them. Linear least squares problems are often encountered in the context of fitting a model to measurement data. They also allow one to rephrase the problem of solving a nonlinear system of equations as an optimization problem, while the converse is possible too.

Second, we address optimization problems subject to a given set of constraints. A well-known such class consists of linear optimization functions subject to linear equality or inequality constraints: the class of linear programs. The problem of fitting a linear model to measurement data using the criterion of least absolute deviations, can be reformulated as a linear program. Several methods are available to solve such problems, including active set methods and the simplex algorithm, but also interior point methods and primal-dual methods. We discuss the Kuhn-Tucker conditions for optimality. For the optimization of nonlinear functions subject to nonlinear constraints we address the Lagrange multiplier method.

To demonstrate the various optimization problems and solution techniques, we will provide many examples and exercises. To demonstrate the wide range of applicability, these are taken from different fields of science and engineering. To become acquainted with optimization techniques, one computer class is organized in which the basics of the software package Matlab are presented.

Literature
- Hand-outs will be distributed during the course.

Recommended literature:
- F.S. Hillier and G.J. Lieberman: Introduction to Operations Research (10th edition). McGraw-Hill, 2015 ISBN 978-0-07-352345-3.
- A.D. Belegundu and T.R. Chandrupatla: Optimization Concepts and Applications in Engineering (2nd ed.). Cambridge university Press, 2011.
- Martin T. Hagan et al.: Neural Network Design (2nd edition), available as free ebook.

Instructional format
Lectures and exercises, including one computer class with Matlab, in order to study optimization in a mixed and interactive way.

Examination
Two homework assignments (10% of the final grade, each), a written midterm (40% of the final grade) and a written final exam (40% of the final grade) with open questions.

SCI3005   Metabolism, Nutrition and Exercise

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Prerequisite
SCI2035 Biochemistry.

Recommended
SCI2009 Human Physiology, SCI2037 Cell Biology.

Objectives
- To acquire knowledge of cellular and whole-body energy metabolism in rest and during exercise.
- To acquire knowledge of the effects of nutrients on cellular and whole-body energy metabolism.
- To acquire knowledge of the effects of training on different body systems and how this relates to exercise.
- To translate scientific, biochemical theories and processes to pracital applications for laymen.

Please note that this course focuses primarily on the biochemical aspects of metabolic processes. It is not a course on nutrition or exercise physiology.

Description of the course
The aim of the course is to provide students with a solid understanding of the key aspects in energy metabolism, and the effects of nutrients on skeletal muscle metabolism during exercise of different types. The course requires prior knowledge on some simple (bio)chemical concepts (e.g. the structure and function of macromolecules, common forms of chemical reactions, basic cell structure, and metabolism of macromolecules).
The course builds around a practical case study. With a group of students, you develop a recommendation regarding nutrition and exercise for a patient, a client, or an organisation. Since this is an advance-level course, with students from different backgrounds, you can also provide other recommendations, e.g. how to motivate the client to meet the recommendations.
The first part of the course provides a theoretical framework on the basics of exercise biochemistry and exercise physiology. In the form of tutorial groups, you discuss the physiology of muscles, the metabolism of macronutrients, the hormonal regulation of metabolism, and the biochemical and physiological role of micronutrients in relation to exercise and fatigue. You are not confronted with predesigned problems; instead you can relate the theoretical framework directly to your case. The course builds on knowledge you have obtained in basic and intermediate courses, such as biochemistry, human physiology, and cell biology. In addition, you are encouraged to relate to appropriate knowledge from other courses. This course serves as a culmination: relevant knowledge acquired in previous courses is combined and applied.
In the second part of the course, you look further into the case and fill in the gaps. You may have to do some more literature research, but you can also get in touch with professionals who work with cases like yours on a day-to-day basis. There will be ample time to discuss the group work in class, and ask for and provide feedback to fellow groups. This will be in the format of group discussions and a peer review session. By doing so, you have the opportunity to present your findings and ask remaining questions or discuss issues in relation to the case study, as well as to receive feedback on how to proceed. A recommendation on your case, in the form of a group assignment, concludes this part of the course.

Literature
- There is no main book for this course. A list of suggested readings is provided in the course manual; these books are all available in Reading Room at UCM and/or in the library. In addition, an E-Reader will be posted on the Student Portal.

Instructional format
Tutorial group meetings, workshops and lectures.

Examination
Assessment will be based on a recommendation to a client.

SCI3006   Mathematical Modelling

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Sciences	No

Prerequisites
SCI2018 Calculus and SCI2019 Linear Algebra.

Objectives
- To have the ability to interpret dynamical phenomena as mathematical systems and to cast them into such form.
- To understand the basic concepts of linear and nonlinear systems theory.
- To be familiar with analysis techniques for dynamical systems, to understand their behavior and interaction.
- To become familiar with some application areas of mathematical systems and models.

Description of the course
To describe natural phenomena and processes, mathematical models are widely used. The focus in this course shall be on dynamical models (i.e., where time plays a role) in particular those that have interaction with the environment through inputs and outputs. Mathematical systems theory provides the framework to deal with such models in a systematic and useful way.

First we consider some general aspects of mathematical modeling. Then we address dynamical systems without inputs and outputs - but which may show nonlinear behavior. We study basic properties such as equilibrium points, linearization, and stability.

We then switch to linear dynamical models with inputs and outputs. They are used in many different areas of the natural sciences and in engineering disciplines. We discuss the following topics and concepts. Linear difference and differential equations, Laplace transforms, transfer functions of linear systems; controllability, observability, minimality; system representations with an emphasis on state-space representations and canonical forms; stability; the interconnection of linear systems including feedback; frequency domain analysis and the relationship with filter theory, Fourier analysis, and time series analysis.

To demonstrate the applicability of the techniques and concepts, many examples from science and engineering are mentioned and briefly discussed.

Literature
- Lecture notes, electronically provided

Recommended background literature:
- R.J. Vaccaro, Digital Control. *A State-Space Approach*, McGraw-Hill International Editions, 1995. ISBN: 0-07-066781-0.
- S.H. Strogatz, *Nonlinear Dynamics and Chaos*, Perseus books (1994)
- D.W. Jordan and P. Smith, *Nonlinear Ordinary Differential Equations*, 2nd ed., (Oxford Applied Mathematics and Computing Science Series), Clarendon Press, 1987.

Instructional format
Lectures and exercises in a mixed and interactive way.

Examination
Form: Four small open question quizzes with time limit and some randomized element to ensure individual work, and a take-home final exam with open questions.
Weighting: The final grade consists of 80% of the exam and 20% of the quiz results
For the resit exam, the grade from the quizzes counts for 20% if it is above the pass mark. If not, the resit exam counts for 100% of the grade.

SCI3007   Endocrinology

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Sciences	No

Prerequisites
SCI2009 Human Physiology or any Maastricht University College, physiology equivalent.

Objective
- To obtain insight into the neuro-endocrine control of the human body by studying illnesses that disturb these homeostatic control mechanisms.

Description of the course
The discipline Physiology deals with the explanation of the biological, physical and chemical factors that are responsible for the origin, development, and progression of life. The first course on Human Physiology – which is compulsory for this course - focused on the specific characteristics and mechanisms of the normal homeostasis in the human body.
In this follow-up course disturbances in physiological function (homeostasis) resulting in disease will be studied and used to deepen the knowledge on human endocrinology. These disturbances will be studied through the presentation of patient cases exemplified by; hypertension, renal failure, infertility, steroid abuse, diabetes and starvation. Attention will also be paid to the treatment of these diseases.

Literature
- Multiple sources provided by UM/UCM libraries including textbooks on:
  Physiology, Biochemistry, Physics, Pathology, Internal Medicine, etc.
  The use of the on-line library Access Medicine and Clinical Key (access provided by UB).
  Peer-reviewed literature.

Instructional format
Tutorials, Team-based learning meetings (assignments as a duo with concomitant presentations) and lectures.

Examination
Weekly oral presentations on patho-physiological assignments and a written final-exam.

SCI3046   Cognitive Neuroscience

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences & Social Sciences	No

Prerequisites
SCI2034 Functional Neuroanatomy/SCI2034 Brain and Action and elementary knowledge of electricity and magnetism as stated under SCI-P(p. vi-viii).

Recommended
SCI1009 Introduction to Biology or SSC1005 Introduction to Psychology or SSC2025 Memory.

Objectives
- To give an introduction into the field of cognitive neuroscience.
- To learn which methods a brain researcher can use to investigate the neuronal bases of different mental processes.

Description of the course
Cognitive neuroscience is a research field that originally emerged from a combination of traditional sciences such as philosophy, psychology, medicine and biology that all investigate the principles of perception, behaviour and cognition from different perspectives.

As technical developments of different methods and tools in the field of cognitive neuroscience came forth, and as theoretical application of different mathematical and computer science-based models were used to explain neuronal functioning, additional disciplines, such as physics, mathematics, bioengineering and computer science materialized as an important part of this research field.

Subsequently, an effective research project in cognitive neuroscience requires an interdisciplinary cooperation, in which each scientific discipline contributes its respective genuine theories, models, techniques and tools for the mutual investigation of the neuronal principles of perception, attention, and cognition.

But can we really watch the brain at work? Are there ways to identify where exactly, and when exactly activation in the brain is necessary to perform a specific mental process? This course will help to give some answers on the basic principles of brain research and it will show relevant applications of these techniques in different areas of cognitive psychology.

Literature
- E-reader.

Instructional format
Tutorial group meetings and lectures. The course also includes two excursions to the brain imaging centre in Maastricht for some hands-on experience.

Examination
A group presentation and a final exam. The exam will consist of several open questions.

SCI3049 Pathobiology and Disease

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences	No

Prerequisites
SCI2037 Cell Biology and SCI2031 Immunology.

Recommended
SCI2040 Microbiology, SCI2009 Human Physiology, SKI2088 Lab Skills: Genetics, SKI2077 Lab Skills: Molecular Cell Biology and Genetics.

Objectives
- To gain more insight in the field of pathobiology. particularly in immunological and oncological diseases
- To increase appreciation and knowledge of healthy living.
- To provide students with a good basic knowledge required to enter master courses in life sciences.

Description of the course
In this course students will have an opportunity to learn how modern medicine has benefitted from our knowledge in the fields of (molecular) cell biology and immunology. Pathobiology is the field that deals with disturbance of normal physiological processes and the consequences of it for adequate functioning of our human body. Our challenge has been to arrange a program that offers insight in the nature, the causes and processes of disease.

The emphasis in this course is on diseases of the immune system and oncology. In this respect, this course builds on the knowledge obtained in the UCM course 'Immunology' and 'Cell Biology'. It is our hope that the acquired knowledge will furthermore enable you to better understand and appreciate the newest developments in treatment of these diseases.

The program comprises PBL tasks, workshops and assignments. PBL tasks will be presented to you in the form of tutorial group meetings and topic-related lectures. The tasks deal with 1) examples of diseases caused by unwanted reactions of the immune system, e.g. chronic inflammation and autoimmunity, and 2) with oncological diseases in which cells have gone astray, circumvent the body's defence mechanisms and give rise to cancer.

Workshops will address immunology- and oncology-related research highlights related to diagnostic, preventive and (immuno)therapeutic developments in immunological and oncological diseases.

Assignments consist of writing an essay and giving a presentation on a block-related subject for discussion and deepening in the tutorial group meeting.

Recommended Literature
- Abbas, Lichtmann and Pillai. Cellular and Molecular Immunology, 8th edition, 2014.
- Alberts et al. Molecular Biology of the Cell, 6th edition, 2015.

Instructional format
Tutorial group meetings, work-shops and lectures.

Examination
A final test, an essay and presentation.

SCI3050   Advances in Biomedical Sciences

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Sciences	No

Prerequisites
At least one of: SCI2017 Organic Chemistry, SCI2037 Cell Biology. Highly motivated students with a different background should speak to the course coordinators.

Objectives
- To gain insight into frontier topics of the biomedical sciences, with first-hand accounts of successes, problems, and a forecast for the future.
- To apply knowledge from the natural sciences towards problems in society.
- To give an accurate account of the work and thought process of academic researchers.
- To learn to critically read scientific news and perform basic literature research.
- To learn how to ask questions of a scientist and report others research to a wider audience.
- To gain familiarity with cutting edge research within the MERLN and M4I institutes.
- To access new labs and research lines starting with young Assistant Professors within UM.

Description of the course
The purpose of this course is to introduce students to recent breakthroughs in the physical and biological sciences that are now being explored for biomedical applications. The topics will come directly from the research expertise of the lecturers, all of whom are young principal investigators in the new research institutes at the UM: MERLN and M4I. The course will cover a broad range of topics, including nanomaterials for regenerative medicine, supramolecular biomaterials, big data and computer learning, electron microscopy, imaging and diagnostic mass spectrometry, and structural biology of tuberculosis. Each of these fields has the potential to address some of society's greatest challenges, including the health and vitality of our ageing population, and this will be discussed in both the lectures and the tasks. Students will gain firsthand experience of scientific research taking place at the UM and will have the opportunity to visit research laboratories as part of a demonstration of some of the topics discussed in the lectures. Students will experience unrestricted access for a firsthand account of a new generation of research lines with a new generation of labs.

In addition to a final content-based oral exam, there will be two papers for evaluation. For their midterm, students will choose a recent discovery reported in the press and investigate the scientific claims and integrity of the reporting. In the final paper, the student acts as the reporter, and will write an opinion piece on a topic of research in either MERLN or M4I; this report will be informed by an interview with one of the lecturers.

This course is designed for top students with a concentration in the sciences who wish to advance their learning to the next level, beyond textbooks. Students will benefit from close contact with young scientists from diverse fields and will be expected to read scientific literature to enhance their learning. Skills learned within this course will be highly applicable for more advanced degrees (Master's, PhD) within the sciences, and within the competitive job market.

Literature
Selected scientific papers.

Instructional format
Lectures, tutorial group meetings, interview, lab/institute visit.

Examination
A midterm paper, final paper and final oral exam.

SCI3051   Data Analytics

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Sciences & Social Sciences	No

Prerequisite
SCI2033 Data Mining.

Recommended
SSC2061 Statistics 1.

Objective
- This course aims at getting hands-on experience in analyzing managerial decision processes, based on available data, and using quantitative techniques for decision making

Description of the course
This course treats the theory and practice of Business Analytics, data mining, process mining and simulation. Methods for the analysis of data are presented, from current data analytics toolboxes. We study how (and how not) to build predictive models to extract information from large databases and how to interpret the results. The thus discovered knowledge is used for intelligent decision making to make processes run more efficiently and to develop new services for the organizations that provide the data.

The course aims at getting hands-on experience in analysing managerial decision processes, based on available data from real-life cases. The course consists of applying up-to-date data analytics techniques on real-life problems. These techniques will be implemented with modern software tools (Excel, Celonis & Knime).

Literature
- Data Science for Business, What You Need to Know about Data Mining and Data-Analytic Thinking, by Foster Provost and Tom Fawcett, O'Reilly Media 2013. ISBN 978-1-4493-6132-7, EBook ISBN 978-1-4493-6131-0 (not compulsory).
- Other materials, i.e. slides, selected scientific papers and data, will be made available through Student Portal.

Recommended:
- Cole Nussbaumer Knaflic (2015). Storytelling with Data: A Data Visualization Guide for Business Professionals. Wiley. ISBN-10: 1119002257, ISBN-13: 978-1119002253

Instructional format
Lectures and tutorial group meetings.

Examination
Papers and Participation.

Social Sciences (SSC)

SSC1005   Introduction to Psychology

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	1 / 4	5	Social Sciences	No

Prerequisite
None.

Objectives
- To engage students in scientific inquiry about psychological processes.
- To introduce students to the various subfields of psychology as an academic discipline.
- To gain a basic understanding of the methods of psychological research.

Description of the course
Psychology is all around us. Psychology permeates our everyday lives. It is therefore not surprising that the science of psychology has received great interest from behavioral scientists and the general public alike. We are all amateur psychologists. We all want to know what makes us and other people tick! However, our common sense understanding of how people think, feel and act is often misguided. The self-referential nature of psychology has caused some people to believe that psychology is not a science at all! This course will show you that psychology is a science, and that it encompasses the collaborative efforts of scientists from many different disciplines. Psychology is the study of behaviour and mental processes, and as psychologists we aim to describe, understand, predict, and sometimes change behaviour. Psychologists study human behaviour and mental life from different perspectives (i.e. biological, individual and social) and at different levels of analysis (from genes and the brain up to the social and cultural level). We will consider what these different approaches have to offer in our quest for an understanding of the human mind, the brain, and behaviour. Along the way, scientific methods of psychological research will be introduced by addressing some of the main questions that drive contemporary psychology: How do we experience fear or happiness? How do we (think we) see the world around us? How do we learn, remember and forget things? Where should we draw the line between normal and abnormal behaviour? How social are humans? When do people harm or help others?

Literature
- Gray, P. & Bjorklund, D.F. (2014), Psychology (7th ed.). New York: Worth Publishers.
- E-reader.

Instructional format
Observational research practical, tutorial meetings and lectures.

Examination
Small research report, presentation and written exam.

SSC1007   Introduction to Law and legal Reasoning

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	1 / 4	5	Social Sciences	No

Prerequisite
None.

Objectives
- To introduce students to the basic areas of law (contracts, property, torts, criminal law, international law etc.).
- To familiarize students with the methods of legal reasoning.
- To illustrate to students how law arises in response to social problem and how it is different from other domains such as politics and morality.

Description of the course
   This course aims to introduce students to the general content of modern law and to the discipline of legal reasoning. These two go together. Law cannot be fully understood in abstraction of the particular way that lawyers, judges and other expert operators of the legal system look at it. Coming out of the course, students should be able to understand what law is and how it is different from (and similar to) morality, identify the main branches of Law and their basic institutions, recognize and differentiate the principal values underlying those branches and understand the nature of legal reasoning and be able to apply it to legal problems.
   It is often assumed that to study law means essentially to study the law of a particular jurisdiction. A Dutch lawyer studies Dutch law and a German lawyer studies German law, and there is little that they share beyond the name of their chosen profession. This picture is misleading. Despite the fact that every country establishes its own legal system, there is much less diversity in law than what one would imagine. A key theme of this course is that law arises naturally as a solution to various social problems and, to the extent that human societies face the same problems, similar responses appear almost everywhere. Even though details may vary, contract, property, inheritance, marriage, constitutions and crimes exist in almost all modern societies. Instead of focusing on specific sets of rules like the Dutch Civil Code, or the French Criminal Code, this course focuses on these widely shared problems and widely shared institutional responses.
   With regards to legal reasoning, the course asks students to create a tax, which will help them understand how law can be used as a policy tool for regulatory and redistributive purposes. In this connection, the course will also include a "workshop" where students will be asked to go through a high profile judgment and identify the logical moves taken by a court to justify its decision.

Literature
- Jaap Hage & Bram Akkermans, Introduction to Law (Heidelberg: Springer 2017).
- Additional material on legal reasoning provided by the instructor.

Instructional format
Tutorial group meetings and weekly lectures.

Examination
Written exam plus assignment.

SSC1025   Introduction to Political Science

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	Yes

Prerequisite
None.

Objectives
- To introduce students to the concepts, ideas and theoretical underpinnings which constitute the study of government and politics.
- To outline the scope of political science and its central themes.
- To provide the intellectual skills necessary for coming to informed judgments about political issues.

Description of the course

This course will be an introduction to a field of study that is often subdivided into five or more disciplines. The subdivision list includes International Relations, Comparative Government, Political Theory/Philosophy, Public Policy/Public Administration and finally a state-centric discipline which depends on your country of origin (i.e. American Politics or Dutch Politics to name two).

The course will start with a simple examination of the meaning of the world "politics." How much of politics is really about solving distribution problems? In other words, a limited amount of resources in society must be distributed in some equitable manner. After this initial discussion, the course will move to consider the central themes of Macro politics, with particular emphasis on the classification of political systems, political ideology and political authority.

Themes in Micro politics are addressed in the second half of the course. Micro politics refers to the study of how individuals "fit" into their political system. Micro political topics will include political socialization, political groups, elections, voting, political parties, party systems and political leadership. The course ends with a look at system performance and how to bring about change in political systems when performance is wanting.

To help students understand and relate to the political realm in which they exist, each student is required to embark on an individual research paper about their country of origin. It is hoped that this assignment will not only allow students to apply concepts learned in the course but also prompt them to expand their knowledge of how to use resource materials available via the library.

Literature
- Heywood, A. (2020). *Politics*, 5th edition. Basingstoke, UK: Palgrave.
- E-readers.

Instructional format
Tutorial group meetings and lectures.

Examination
A final exam (consisting of multiple choice questions, true and false questions and essay questions), a constructive learning assignment (creating your own exam questions)* and a research paper. *If covid-19 is still not allowing in-class exams, the exam will be take-home essay exam.

SSC1027   Principles of Economics

Semester	Period	ECTS	Concentration	Device Free
Fall/Spring	2 / 5	5	Social Sciences	No

Prerequisite
None.

Recommended
Standard high school knowledge of basic mathematical concepts such as solving equations, reading and working with graphs, and manipulating inequalities is expected. Students who lack this knowledge are advised to take SCI1010 (Basic Mathematical Tools) first.
In economics, no prior knowledge is assumed.

Objective
- Get acquainted with basic ideas and concepts to understand economic debates and be prepared for possible further economics courses.

Description of the course
According to a classic definition, economics is the study of the use of scarce resources that have alternative uses. This course introduces basic economic ideas and concepts. In the lectures, we first study markets, the most common allocation mechanism for scarce resources of any kind in many economies. We analyze behaviour on markets, outcomes of markets, and different market forms. Here, we also introduce game theory to study situations with strategic interaction (e.g., oligopolistic competition). We then turn to the idea of comparative advantage as an explanation of trade patterns. While the first part of the course mainly covers microeconomic topics, the second part is devoted to macroeconomics. Here, we first consider macroeconomic indicators (e.g., GDP) and then study economic fluctuations (e.g., the Great Recession of 2007–2009) as well as economic policy. Further topics (e.g., the monetary system) will be covered in the tutorials. Through presentations and special debates (e.g., on Behavioral Economics), the tutorials give the opportunity to apply and reflect on some of the contents of the course.
The course provides a foundation for many other economics courses at UCM. It is a strict or recommended prerequisite for courses such as SSC2020 (The Economics of Information), SSC2038 (International Macroeconomics), SSC2043 (Development Economics), or SSC2048 (Intermediate Microeconomics).

Literature
- Acemoglu, D., D. Laibson, and J.A. List, Economics, global edition. Pearson.
  The edition will be stated in the course manual.

Instructional format
Tutorial group meetings and lectures.

Examination
Written final exam, presentation, special discussion session, participation

SSC1029   *Sociological Perspectives*

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	No

Prerequisites

None. Please note that this course is specifically designed and intended for freshmen.

Objective

- To become conversant in the foundations of sociological thought and theory.
- To gain understanding of the primary areas and topics of sociological analysis.
- To be able to apply sociological concepts and theories to the study of pertinent social problems.
- To reflect on the relevance and utility of sociology in the 'everyday' world and public policy-making.

Description of the course

This course offers an introduction to the social scientific discipline of sociology. The course focuses on various foundational areas of sociological research and theorizing in order to explore how sociologists approach the study of various social processes, practices and problems. Some key questions explored include: What is Society? How are individuals shaped by society? To what extent can and do individuals shape society? How have different societies developed historically? How do societies distribute wealth, income and other resources? How do societies establish particular kinds of political authority and power relations? How are cultural identities, values and beliefs reproduced over time? What are the sources of conflict, consensus and change in society? Working from a global comparative perspective, the course will introduce students to different strands of sociological theorizing, the distinctive levels of sociological analysis, and some of the most central areas of sociological investigation, such as class, race/ethnicity, gender, sexuality, culture, media, education, marriage, work and globalization. Periodic attention will be given to applying the sociological lens to the analysis of pressing social issues and problems in the contemporary world, such as inequality and violence.

Literature

- Sociology: A Global Perspective (9th Edition) by Joan Ferrante.
- Selection of E-reader.

Instructional format

Tutorial group meetings and lectures.

Examination

One short essay, a group presentation and a final exam.

SSC1030   Introduction to Business Administration

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisite
None.

Objective
- To introduce students to topics in business administration. In addition, the course prepares students for courses in marketing, organization, finance, strategy, supply chain management and accounting.

Description of the course
Business administration studies economic problems within the firm and relates to problems in the fields of marketing and logistics, finance, accounting and information management and organization and strategy. Business administration aims to provide an integrated view of all the various (sub) disciplines. This course introduces students in the various topics that are related to business administration so that students have basic knowledge for the more specialized courses in marketing, organization, finance, strategy, supply chain management and accounting. The course will be centered around a real-life management simulation: Market Place live.

Literature
- E-reader.
- Course material on Market Place live (for which you must purchase an individual licence).

Instructional format
Tutorial group meetings, team work and lectures.

Examination
A midterm test, tutorial group participation, participation and ranking in market place live management simulation.

SSC2002 International Relations: Themes and Theories

Semester	Period	ECTS	Concentration	Device Free
Fall/Spring	1 / 5	5	Social Sciences	No

Prerequisite

COR1003 Contemporary World History OR COR1002 Philosophy of Science OR SSC1025 Introduction to Political Science.

Students who already took SSC1006 Introduction to International Relations cannot take this course.

Objectives

- To provide students with an in-depth understanding of the main theories and critical approaches in International Relations.
- To analyse foundational concepts of international politics, such as system, states and security.
- To discuss many key historical and contemporary issues, tranformations, actors and events in International Relations.

Description of the course

Please note that this course used to be titled the SSC1006 Introduction to International Relations. Some content and literature of the course and its assessments have been modified to meet the requirements of a 2000-level course.

The first part of the course discusses several mainstream International Relations (IR) theories and issues including neoliberalism, neorealism and debates about the liberal world system. Moreoever the problematics of soft versus hard power, absolute versus relative gain, cooperating versus cheating, war versus peace will be discussed. In this part, we will not go through the world history, contemporary history, main international institutions or the history of nation-states. We will immediately start studying contemporary IR.

The second part of the course covers less mainstream approaches, some 'new' theories and some neglected issues about the 'other' side of world politics. In this part normative and ideational structures, environmental issues, problems of the developing world, gendered-biases, economic inequalities, the construction of partial knowledge, the legitimization of power politics, the representation of images, establishment of stereotypes and the reproduction of hegemony will be studied critically. Moreover, new IR approaches like Queer theory and Asian IR approaches will be discussed. In this part, we aim at asking important questions and try to find reflective answers about the role of power and hegemony, how to make IR more green, how to de-colonialise knowledge about the world, how to make IR and politics more gender-sensitive.

It is important that students become aware of the theoretical richness of the discipline, and that there is not a single 'right' way to answer questions about what is happening around us in the world. Students are given a chance to dicuss and to apply those theories to different and more specific cases and issues. For this reason, this course is an opportunity to learn and apply international relations theories, concepts and models to the daily news and real time developments in the world. Case studies or specific issues are provided by the course literature. Thus, the course is based on active student participation.

Literature

- E-readers and several other visual, audio or written material

Instructional format

Tutorial group meetings and lectures.

Examination

Midterm assignment will be in the form of either a take-home exam, or quiz exam(s) or presentation-papers. Final will be a reflective and analytical paper or take-home exam. Students wiil be also be graded by their class participation.

SSC2004   *Clinical Psychology*

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite

One of the 1000 or 2000 level psychology courses offered at UCM.

Objectives

- To make students familiar with the most common psychiatric disorders; their clinical pictures, diagnostic criteria, the etiological theories and the empirical findings that either support or refute the theories, current ways of treatment, and the effectiveness of the therapies.
- To give students more detailed knowledge on clinical practise by 'working for a client'.
- To learn basic clinical interview techniques.

Description of the course

The course *Clinical Psychology* is concerned with mental disorders. It is aimed at understanding mental and behavioural distress and/ or dysfunction and thereby learning about how to promote subjective well-being and personal adaptation. On the basis of case descriptions, important clinical pictures of a.o. different anxiety disorders, eating disorders, addictions, mood disorders, psychotic disorders, and personality disorders are examined.

Questions that are raised continually during the course are: What is the clinical picture of…? Where is the boundary between no need for care and need for care? What causes such a disorder? And what can be done about the disorder? At the end it will be clear that there is a gap between theory and practice, between scientific thinking and clinical treatment. A number of different theoretical schools will also be examined, and these schools explain/treat psychiatric disorders in keeping with their favorite theory. The choice of theory/treatment in most cases is thus based on ideology and not empirical findings, and the question is whether this situation is so desirable.

Literature

- Various textbooks on clinical psychology (can be found in UM library and UCM Reading Room).
- E-readers.

Instructional format

Tutorial group meetings and lectures.

Examination

A final exam with a minimum of 6 open questions, and a 'client-eportfolio' (the client portfolio is small group work where students write a treatment plan for a 'fictional' client).

SSC2006   Developmental Psychology

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
SSC1005 Introduction to Psychology.

Objectives
- To teach students what kind of changes underlie psychological development.
- To teach students how children develop psychologically in perception, cognition, language/arithmetic, personality and emotions from infancy to adolescence.
- To teach students about developmental disorders such as autism and ADHD.
- To provide students with knowledge on elementary biological processes that underlie psychological development.
- To provide students with knowledge about the learning processes that children have at their disposal such as habituation and social learning.

Description of the course
The development of and changes in psychological functions from birth through adolescence are the topic of this course. These changes will be illustrated with many empirical findings and explained by some theoretical models. Such influential older theories as that of Piaget will be compared to more recent information processing models of development and evolutionary perspectives. How does a child reason? How does a child becomes faster and better in learning? How does a child succeed in developing from almost nothing into an adult? How do children learn to perceive and to think (the so-called cognitive development) ?

In addition to these questions, attention will be paid to aritmetic development. The social-emotional basis for later development will also be explored. It concerns the attachment relations to mothers and fathers. How do infants form attachments? Is attachment important? Do our early attachments influence our later emotional development? Other social-emotional topics are temperament and aggression. The course will address differences in development too, such as disorders as autism and ADHD. When is an active young boy normal and when do we say that he has ADHD?

Literature
- To be announced.
- Selected chapters and journal papers.

Instructional format
Tutorial group meetings and lectures.

Examination
There is a midterm exam consiting of written essay questions or an assignment. The final examination consists of written essay questions.

SSC2007   Intermediate Macroeconomics

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite

SSC1027 Principles of Economics. Knowledge of basic mathematical concepts such as solving equations, reading and working with graphs is a prerequisite, as well as the knowledge of general macroeconomic indicators and concepts.

Objective
- Introduce students to an intermediate level of macroeconomics by linking theory, data, and current policy debates.
- Provide students with theory-based arguments required to understand relevant macroeconomic issues in academic and policy discourse.

Description of the course

In this course we discuss how national income, employment, and prices are determined. We study long-run economic growth as well as short-run fluctuations in economic activity, unemployment, and inflation. We then analyse tools of fiscal and monetary policies. Throughout this course economic data is tightly woven into the discussion of economic theory.

By the end of this course we are able to critically assess and contribute to discussions on current economic issues and give an educated assessment on economic commentary, analyses, or policy proposals (for example in publications such as the The Wall Street Journal or The Economist).

Literature
- Olivier Blanchard, Macroeconomics, Pearson, 7th (global) edition

Instructional format

Tutorial group meetings and lectures.

Examination

Participation, a project including presentations and a report, and a final written exam*.*

SSC2008   Organization Theory

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
None.

Objectives
- Provide insight and enhance knowledge about the impact of external environment on how an organization is designed.
- Provide insight and enhance knowledge about various organization designs.
- Provide insight and enhance knowledge about the components of organizational structure and organizational culture.
- Provide insight and enhance knowledge on the impact of leadership and learning processes on organization design.
- Prepare for future practice in designing and managing organizational systems and learning processes.
- Develop discussion competence, constructive feedback seeking and feedback giving approaches, and the capacity to critically analyse within topics and synthesize across topics.
- Develop the ability to professionally lead discussions and give impactful presentations.

Description of the course

This course is aimed at getting to know more about organizations, at gaining an understanding of workplaces, and learning about how to enhance your relationships with the organizations that you encounter throughout your life and career ahead. Organization Theory is a branch of social sciences that is particularly interested in the why, how, and when multiple individuals join efforts to reach a common goal. It is a multidisciplinary subject drawing from disciplines such as arts and humanities, educational sciences, psychology, evolutionary biology, economics, and politics. These multiple lenses through which we view organizations, makes Organization Theory a fascinating and relevant topic to explore and examine at any stage of your study program. Main topics covered in this course are organization-environment relations, organizational design types, organizational structure and culture, leadership development, organizational learning, and managing organizational growth and decline.

Literature
- Academic journal articles, (business) press articles, case texts, etc.

Instructional format
Introductory lecture and tutorial group meetings.

Examination
Case presentation, discussion leadership, group assignment.

SSC2009 Corporate Finance: Behavioural Foundations A Touch of Responsible Investments and Behavioral Economics

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite

Students should have taken one or more of the following three courses: SSC1027 Principles of economics, SSC2022 Accounting and accountability or SSC2036 / SSC1030 Introduction to Business Administration.

Objectives

- You get a broad overview of the field of finance.
- You will be able to better understand financial articles in newspapers like the Financial Times, the Wall Street Journal and the Economist.
- You will be able to apply your knowledge to understand basic financial information of the firm or institutions you will work for.
- You deepen your knowledge on a specific financial topic of your choice on which you will work for your project.

Description of the course

Today's business environment is more complicated than ever. This is illustrated by the recent financial crisis and its aftermath and emerging topics like climate change and corporate social responsibility increasingly affecting corporate decision making. The field of corporate finance deals with the financing and investment decisions made by the management of companies in the pursuit of shareholder wealth maximization and dealing with the preferences of other stakeholders. This course gives a broad overview of important issues in corporate finance and combines insights from (behavioral) economics and finance. The economic side of corporate finance deals with the maximization of shareholder wealth. Managers aim at securing the greatest possible return in exchange for accepting the smallest amount of risk. For instance, a company can finance itself by borrowing money from banks, by issuing bonds or through issuing equity at the stock market. These types of decisions influence the expected return and risk of the company.

Traditional economics assumes that managers and investors are rational, self-interested people. However, there is a large body of evidence from social psychology and behavioral economics that people often act irrationally and behave pro-socially by taking the social impact of (investment) decisions into account. This course also shows how decision making biases managers and investors in their financial decisions and how social preferences of shareholders and stakeholders impact corporate social responsibility. Investors in both equity and debt claims of these companies have (heterogeneous) social preferences. Increasingly, large institutional asset owners such as public pension funds exert pressure on the management of companies with the purpose to increase the governance quality, and the environmental and social performance of their investments.

The course is largely based on real-life cases that we discuss in an interactive manner during tutorial groups. Students will debate on topics such as "What amount of risk should companies take?" and "Is it important for firms to put corporate social responsibility high on their agenda?".

Literature

- Berk, J. and P. DeMarzo, Corporate Finance - Pearson International Edition, Latest Edition, Pearson Education, Inc.
- Scientific articles.
- Case Studies.

Instructional format

Tutorial group meetings and lectures.

Examination

Written assignment, presentations and a final exam.

SSC2010   *Contending Perspectives in Economics: The Case of Inequality*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite

SSC1027 Principles of Economics

Objective
- To provide students with basic insights into the main contending perspectives in economics.
- To acquaint students with various views of inequality and how inequality can be measured.
- To familiarize students with discussions on inequality and how scholars from different economic perspectives can be linked to these discussions.

Description of the course

In recent years, the issue of rising inequality has dominated the media. People's views on inequality are shaped by their perception of the world. Economists are no different. In this course, we will discuss various perspectives in economics such as Neoclassical, Austrian, Marxism, Post Keynesian, (New) Institutionalism and Feminist Economics. We will both focus on these perspectives within the field of economics as a scientific discipline, and on how these perspectives differ in their view on inequality.

According to some scholars, inequality is a natural phenomenon in a capitalist market economy. It is a fair reward for higher education and training. Some other scholars disagree with this view. They observe that the sharpest inequality stems from other sources than education, and it is not justified by individual merits alone. Further, they emphasize that inequality in itself has detrimental effects on societies and therefore it should be prevented as much as possible. Finally, some economists see inequality as the result of economic growth and therefore conclude that increases in societal wealth cannot be attained without inequality.

In this course, we will firstly discuss the main elements within each school of thought, how they emerged and how they differ from each other. Secondly, we accompany these discussions with their view and interpretation of inequality. We discuss various perspectives in which inequality can be regarded such as the distribution of income amongst capitalist versus workers, income inequality between various groups in society and the difference between inequality in income versus inequality in wealth. How can we explain differences in society and are these differences persistent? Thirdly, we also touch upon different measures of inequality by using actual data and applying some (simple) indicators.

This all will be discussed in tutorial meetings and students will work on (group) papers. We will present and discuss these papers for which we also include peer feedback.

Literature
- John T. Harvey, Contending Perspectives in Economics, A guide to Contemporary Schools of Thought, Edward Elgar, 2016, or equivalent.
- Various journal articles, book chapters.

Instructional format

Tutorial group meetings, presentations and discussion and (short) lectures.

Examination

Papers, peer-reviews and presentations.

SSC2011   European Integration: History and Theory

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Humanities & Social Sciences	Yes

Prerequisite

COR1003 Contemporary World History or SSC1025 Introduction to Political Science or SSC1007 Introduction to Law and legal reasoning**.**

Objectives

- To provide students with an in-depth understanding of the developments in European integration during the 20th century.
- To introduce students to the main theories and concepts in the field of European integration.
- To critically examine the way the European Union operates in the 21st century as well as to discuss the problems and challenges it currently faces.

Description of the course

This course analyses European integration from the late 1940s until today. In a chronological order, it introduces students to themes such as security, economic integration and enlargement that continue to influence European integration in the present. In parallel, it also provides an overview of the main theories explaining (aspects of) European integration related to these themes, including 'big theories' such as neofunctionalism and neorealism, but also theories dealing with issues such as democratic legitimacy and the EU's normative power. While firmly based in history, the sessions continuously will seek to also reflect on the relation between past processes and current developments, such as Brexit or the Rule of law crisis, as they are unfolding. The course closes with a critical discussion on the main challenges European integration is faced with today and the views developed for its future development.

Literature

- Meurs, W. van, de Bruin, R., van de Grift, L., Hoetink, C., van Leeuwen, K., & Reijnen, C. (2018). *The Unfinished History of European Integration*. Amsterdam Amsterdam University Press.
- Online reader with various texts.

Instructional format

Tutorial group meetings and lectures.

Examination

A research paper and a take-home exam.

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
None.

Recommended
SSC1027 Principles of Economics.

Objectives
- To give students an introduction to the communication of brands to consumers. On the one hand a strong theoretical foundation will be built by studying the textbook chapters and journal articles (E-reader). On the other hand, we will continuously translate this theory to practice, by means of short articles from the business press (E-reader), brief student presentations, and one larger group project.
- Next to being instructive and interesting, this course can also be a lot of fun. We are confronted with brands and advertising every single day, and it is challenging to explore the processes by which this is done.
- To have an in depth understanding of the theories concerning branding, marketing communication and consumer behavior, and of the implications of these theories for marketing management. Skills that will be developed/ enhanced during this course are: presentation skills, teamwork skills, writing skills, analytical skills, reflection skills and creativity skills.

Description of the course
This course covers foundations of brand management and marketing communications (including advertising). The course will take a strong consumer-based focus, therefore the foundation of branding and advertising in consumer behavior and consumer psychology theories will be discussed. We will discuss theory that is at the foundation of branding and advertising and then apply it through team assignments on students' chosen brands.
The course consists of two parts:
- In the first part, we will deal with brand management: In the brand management part the nature of brands in consumers' minds, the concept of brand equity and instruments to build and leverage brands will be discussed.
- In the second part, we will focus on integrated marketing communications. In the integrated marketing communications part we will have a look at the concept of Integrated Marketing Communications, the communication process and theories of consumer behavior and response.

Instructional format
This course consists of 13 tutorial group meetings. Most of the educational group meetings are structured as follows: In the first hour we will critically reflect on and discuss the literature for that meeting.
We will explore the theoretical concepts discussed in the articles and chapters and make sure that everyone understands the big picture. In the second hour, we will apply the studied literature to practice.
The tutorial groups will be divided into three or four teams, and each team will be responsible for a brand during the whole course.
For four sessions there is a small team assignment to be prepared by each team about the specific brand the team has chosen. In essence it means using "your" brand to give a practical example of the literature.
Furthermore, there will be a mid-term assessment in the form of a paper of maximum 8 pages, in which you will have to individually reflect on the brand management topic we discussed in the first part of the course. In week 7 there will be a final assessment in the form of a team presentation (an integrated communications plan) about your brand and a proposed brand extension. Students' assignment is to reflect on the decision of extending the brand into the proposed category, to decide what the brand extension should look like and to set up a launch plan for the brand extension (an IMC plan).

Literature
- To be announced.

Examination
There is no final exam in this course. Examination consists of participation, the small team assignments that are to be presented during the tutorial sessions, the mid-term individual paper and the final group assignment.

SSC2019   Social Psychology

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	Yes

Prerequisite
SSC1005 Introduction to Psychology.

Objective
- To provide an introduction to social psychology.

Description of the course
Social psychology is the scientific study of the ways in which people's behaviour, thoughts, and feelings are influenced by others. This course will cover the core themes from social psychology – such as attitudes and attitude change, conformity, and aggression – and how they can be scientifically investigated. During the course, students will also participate in a "Humans of Maastricht" project. In this project, students will make contact with their self-perceived "out-group," applying social psychological theories and concepts to their experiences and reducing their own stereotypes and prejudice in the process.

Literature
Basic books:
- Hogg, M. A., & Vaughan, G. M. (2018). *Social psychology* (8th Ed). Harlow, UK: Pearson Education Limited. ISBN: 978-1-292-09045-0

Additional readings:
- E-reader.

Instructional format
Tutorial group meetings, practical assignment (2 meetings), and lectures.

Examination
A test with multiple choice and open questions (during the last week of the course) and a written report and presentation concerning the practical assignment. Note that the practical assignment will be completed in pairs and will thus be graded as a group assignment.

SSC2020   The Economics of Information

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	No

Prerequisite
SSC1027 Principles of Economics.

Objectives
- Learn durable economic principles of markets for information goods
- Skills in analyzing such markets
- Overview of legal and policy aspects as well as business practices
- Understand problems arising from lack or unequal distribution of information in economic situations
- Skills in analyzing such problems

Description of the course
    This course studies markets for information goods and gives an introduction to the field information economics.
The term 'information good' is very broad and, in principle, includes everything that is or can be digitized, such as software, databases, or music (as a consequence, trade often takes place via the Internet). These goods have special characteristics; for example, they typically have a special cost structure with very high fixed costs but negligible marginal costs. We study several issues arising from these characteristics, such as pricing of information goods, rights management, and network effects, and usually we also study further issues such as data collection, privacy, and regulatory aspects. In order to better understand how markets for information goods function, we use analytical tools from the theory of pricing and from game theory.
    Information economics is concerned with issues arising from lack or unequal distribution of information in economic situations. Examples include job applications, where the applicant knows more about his abilities than the employer, or insurance contracts, where the insurance company cannot observe the insuree's effort in preventing damages. A central insight is that unequal distribution of information often leads to economic inefficiency. We study the main issues in the field, in particular adverse selection and moral hazard.

Literature
- Perlof J.M, Microeconomics, Pearson. The edition will be announced in the course manual.
- Shapiro, C. and H.R. Varian (1998), Information Rules: A Strategic Guide to the Network Economy. Harvard Business Review Press.

Instructional format
Tutorial group meetings and lectures.

Examination
Participation, presentation and a final exam.

SSC2022   Accounting and Accountability

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
None.

Objectives
- To provide students with an introduction of the field of accounting.
- To give students the ability to apply basic bookkeeping techniques (making journal entries and preparing basic financial statements).
- To provide an understanding of international accounting rules and principles.
- To provide an understanding of the basics of related fields like corporate governance and auditing.

Description of the course
This course will provide an introduction to the field of accounting. Accounting is usually seen as the process of identifying, measuring and communicating (financial) information about a company to interested users, allowing them to make decisions based on this information. These users can be internal to a company (managers, employees) or external to the company (shareholders, banks, investors).

By providing financial information to external users, these users can make decisions regarding the firm. These decisions include whether or not to invest in the firm or lend money to it. This information also allows investors to predict the future of the company and to value it. In short, this information thus allows capital markets to function and provide a healthy economic environment for investment.

The communication of financial information to interested users is guided by accounting standards. These standards dictate how financial information should be recorded, and how it should be presented and communicated to interested parties. This course will follow the International Financial Reporting Standards as the framework for recording and communicating financial information.

Even though these accounting standards exist, managers still have room to present information in a certain way as they have an information advantage compared to the external users. They might use this advantage to hide certain information or to paint a better financial picture of the firm. This will of course have a severe negative effect on the functioning of capital markets. In this course we, therefore, also discuss the fields of corporate governance and auditing. Corporate governance and auditing put regulations and systems in place, that aim to prevent the management from creating bias in the financial statements or try to detect (intentional or unintentional) misstatement.

Because of the importance of accounting in the functioning of economic markets, getting an introduction to this field carries importance for almost all students. Whether small or large, all businesses will have to communicate some information to interested external users. All business will also put systems in place to provide assurance that this information is correct. Therefore, whether you pursue a career within business or economics, or want to start a company for yourself, knowledge of the field of accounting will be useful in the future.

Literature
- Weygandt, Kimmel, Kieso (2019). Financial Accounting with International Financial Reporting Standards, Wiley, 4th edition.
  ISBN hard-copy: 978-1-119-50430-6
  ISBN E-book: 978-1-119-50430-8
- Selected chapters from other text books.
- Research articles available via the UM Library.

Instructional format
Tutorial group meetings and lectures.

Examination
The final grade consists of the following assessments: individual class participation; a midterm exam and a final written exam, both consisting of open questions.

SSC2024   International Law

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	Yes

Prerequisite
SSC1007 Introduction to Law and Legal Reasoning or another law course;
SKI1008 Introduction to Academic Skills I; SKI1009 Introduction to Academic Skills II;
PRO1010 Introduction to Academic Communication: A Writing Project.

Recommended
SSC1006/SSC2002 International Relations: Themes and Theories.

Objective
Students who have taken this course have in-depth knowledge of the characteristics of international law in comparison to national law systems and they will understand how the two systems complement each other. In this context, students can analyze the domestic situation of a State as regards the way in which international law has been implemented. They can identify situations of violations of international law and they are able to determine which steps can be taken to solve conflicts in a peaceful way.
  * In addition, students will have acquired legal skills. In general, they will be able to apply legal theory to concrete cases. More in particular, they can find international legal sources, they are able to closely read and analyze legal documents (especially case law), they can identify legal problems, and they are able to use legal arguments in favour or against a certain legal position.

Description of the course
In particular since World War II international law has been subject to considerable change, both in scope and in content. The number of State actors has grown as the result of the process of decolonization. A large number of international organizations and institutions have emerged as subjects of international law, and also individuals have international legal personality to some extent. Transnational corporations increasingly constitute an important economic power factor in international relations. The need for international cooperation became progressively evident in order to maintain international peace and security, to promote economic and social development, to safeguard the environment and to uphold human dignity.

The course focuses on some of the more traditional issues of international law as well as on some new developments. The topics are: the changing nature and enforceability of international law, subjects and sources of international law including the law of treaties, recognition, territory, human rights, the law of the sea, State responsibility, international environmental law, peaceful settlement of disputes, and the use of force.

One session will be in the form of a moot court on an international environmental law case for which students will prepare by writing a (short) memorandum of pleading. Both the paper and the oral pleading are part of the mid-term examination.

Literature
  * Henriksen, Anders, International Law, Oxford University Press, Oxford, 2017 ISBN: 978-0-19-882872-3
  * Elementary International Law (*Elementair Internationaal Recht*), TMC Asser Press, 2019 ISBN: 978-90-6704-358-8.

Instructional format
Tutorial group meetings, lectures and a moot court session.

Examination
Writing a memorandum of pleading and holding an oral pleading in a moot court setting.
A take-home exam consisting of a case with essay questions.

SSC2025   Memory

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences & Sciences	No

Prerequisite
SSC1005 Introduction to Psychology; SCI2034 Functional Neuroanatomy/SCI2034 Brain and Action is strongly recommended.

Objectives
- To help students acquire knowledge of recent as well as classic theories in the field of memory acquisition, consolidation and retrieval, for short- and long-term declarative memory.
- To provide knowledge of the principles of forgetting, reconstructive processes and false memories.
- To provide knowledge about the biological basis of memory acquisition, storage and retrieval.
- To familiarize students with relevant basic brain anatomy.
- To provide experience with common experimental designs in memory research.

Description of the course
In our everyday cognitive functions we rely heavily on multiple types of memory. This includes seemingly trivial actions, such as remembering your grocery shopping list, to navigate through Maastricht, and to have a sense of your own identity. How are memories formed and maintained in our mind and brain? Do we have multiple memory systems, or just one memory mechanism from which the richness of memory is derived? What happens if our memory fails us, when we forget or when we remember falsely? This course investigates the behavioural (conditioning), cognitive (information processing), and neurobiological mechanisms of both declarative and non-declarative memory. You will study how some memories are produced automatically by your brain, such as in an operant conditioning paraidmg. We will also discuss a number of cognitive models explaining how your explicit experiences are stored in memory. Finally, we will discuss synaptic and molecular mechanisms of memory, such as long-term potentiation (LTP), the role of the hippocampus in memory formation and retrieval, and the cognitive and neurobiological mechanisms that may strengthen or weaken an existing memory. These research topics rely on many decades of cognitive and neuroscientific research that has been awarded with Nobel prizes several times (in 2000 to Prof. Kandel for synaptic plasticity and in 2014 to Profs. O'Keefe and Moser/Moser for hippocampal place cells and navigation).

Throughout the course, we will discuss relevant methodological issues regarding memory research. Importantly, please be aware that brain anatomy and function are an important part of this course; an interest in and understanding of these fields at the level of Introduction to Psychology or higher is strongly recommended. In addition to the tutorial meetings, students will complete a practical and paper assignment in which memory performance of real subjects is assessed.

Literature
- To be announced.
- E-reader.

Instructional format
Tutorial group meetings, practical meeting, and lectures. During the practical meeting, a number of memory tests will be studied. Students are required to test several subjects (e.g. friends, family, fellow students) and write a report on their findings.

Examination
Assessment will be based on a practical report and a final exam.

SSC2027   Law and Society

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisites
SSC1029 Sociological Perspectives, SSC1007 Introduction to Law and Legal Reasoning, or SSC1003/SSC2065 Theories of Social Order.

Objectives
- To study law as a social phenomenon and discuss several theoretical approaches to law and society.
- To examine a variety of legal processes, such as conflict resolution, lawmaking, social control and change, and to seek to understand how they function empirically.
- To examine and understand the interrelations between law (as an academic discipline) and other fields of study.
- To understand current and future development trends in the nexus of law and society (e.g. legal developments in response to automatization, digitalization, and artificial intelligence or in response to new research results in psychology and neuroscience).

Description of the course
Legal scholars generally focus their attention on the law as it appears in books, i.e. legal rules. They look at formal manifestations of the law, such as constitutions, statutes, judicial decisions and court structures. While this is certainly an important aspect of studying law, we would miss a large part of reality if we limited our attention to the formal structures of law and ignored the larger social context in which law operates. While law in action bears some resemblance to law in books, law as a social phenomenon is often far more complex than is apparent from the formal manifestations of law alone. This course looks at the law in action: it studies law as a social phenomenon. Only if we understand how the major elements of a given legal system function together in a specific social context can we really understand how law affects society and how society in turn shapes the law.

The first part of the course will introduce the sociological study of law. We will provide an overview of the field, discuss several prominent theoretical approaches and examine various methods of researching socio-legal questions. The second part of the course will examine several legal processes in detail, using the tools that were developed in the first half of the course. In particular, we will look at the organization and making of law, law as a means of social control, dispute resolution and law as a means of social change. We will also look st current developments in the interrelation of law and society. In the second part of the course, students are also encouraged to actively work with the theoretical frameworks studied in the first part (or explore others that were not discussed in the course) in writing a socio-legal research paper.

Literature
- Sutton, J.R. (2001) *Law/Society: Origins, Interactions, and Change.* Pine Forge Press, Thousand Oaks – London (available as a full-access e-book through the University Library).
- A number of books, articles and book chapters, available (through databases to which UM is licensed) on Student Portal.

Instructional format
Tutorial group meetings, lectures and Q&A sessions.

Examination
A midterm exam which will consist of open-ended essay questions on the theories studied and how they can be used to construct explanations and a research paper on a socio-legal topic.

SSC2028   Classical Sociology

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisites
Either SSC1029 *Sociological Perspecives,* OR SSC1003/SSC2065 *Theories of Social Order*
Students must have completed the full cycle of Research Methods (SKI1004 + SKI1005) as this course requires basic working knowledge of social scientific methodology.

Recommended
Students in their first year of study at UCM are recommended **not** to take this course.

Objectives
- To become conversant in the theoretical foundations of classical sociology.
- To evaluate and assess these theories in a constructive manner.
- To compare and contrast social theories in a critical fashion.
- To be able to apply these theories to the study of contemporary society.
- To understand the socio-historical context from which these theories emerged.
- To reflect on the relevance and utility of social theory more generally.

Description of the course
This course is part one of a sequence of courses tracing back through the historical development of sociological theory. We will engage with the works of early theorists such as Emile Durkheim, Karl Marx, Max Weber, W.E.B Dubois, Jane Addams and George Simmel. Some of the basic lines of inquiry we will pursue include: What were the big questions driving the formation 'classical sociology'? Are these questions still relevant today? What is the basis of social order and structure? How and why do societies change? What are the causes and consequences of conflict in society? What place does the individual hold in the study of society? Throughout the course, we will read original materials accompanied some contemporary interpretations of the classics. This is an essentail course for students interested in the foundations of sociology and the social sciences more broadly.

Literature
- *Understanding Classical Sociology (2003) Hughs, J. Sharrock, W. and Martin, P. [eds] Sage: London*
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
Problem analysis, Pesentation, and Final Exam or Paper.

SSC2037   Peace and Conflict Studies

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisites
At least two 2000-level courses in Humanities or Social Sciences.

Recommended
Some background knowledge on important conflicts in history, on the current conflicts in the world, on international relations theories and methods of social sciences are helpful in this course. SSC2002 International Relations, SSC2024 International Law, COR1003 Contemporary World History, SSC3032 Atrocity Triangle, SSC3040 Identities and HUM2003 Making Crucial Differences are recommended courses.

Objectives
The objectives of this course are to survey the theory and practice of violent conflict and its resolution. The course will discuss some current issues in conflict studies related to the identity, community, belonging, human needs, structural issues, greed and grievances, discourses of violence and conflict, possible causes of communal violence, economic and environmental issues, third-party intervention, mediation, peace-building and reconciliation in the different stages of preventing, containing and ending violent conflict, as well as to gain insight into basic elements of peace and security studies, conflict management and international politics. Specifically objectives of the course is:

- To discuss and learn what conflict and peace mean and why groups resort to violence and what makes peace durable;
- To discuss conflict types and trends and peace index in the contemporary world;
- To get familiar with conflict theories and conflict studies and peace models and approaches;
- To discuss ontological and epistemological issues regarding conflict and peace studies;
- To apply these models, concepts and theories to several conflicts and peace efforts;
- To understand the main techniques of peace-making and conflict resolution such as mediation, and the efforts of International Organisations such as United Nations;
- To discuss peacekeeping and interventions in conflict resolution;
- To get introductory knowledge on ending conflicts and post-conflict reconstruction, peacebuilding and reconciliation processes.

Description of the course
In this course, we will focus on contemporary conflict resolution. The course will cover many issues related to the theories, causes and models of violent conflict in the first part, and then conflict resolution, including prevention of conflicts, (issues of early warning and early action), halting ongoing violent conflict, the role and forms of mediation, peacekeeping and how to end violent conflict, build peace and transform societies to reconcile their differences in the second part.

Tutorials are enriched with case studies, interesting links, presentations and movies.

Literature
- Understanding Conflict Resolution by Peter Wallensteen, Fifth Edition, 2019.
- Peace and Conflict Studies by David Barash and Charles WebelFouth Edition, 2018.
- Additional articles, book chapters and other educational material.

Instructional format
Tutorial group meetings and lectures

Examination
During the course, students can submit a midterm paper, submit quiz essay(s) or make a class presentation (with or without a short paper). Final will be in the form of an extensive paper or a take-home exam. Depending on the number of students, a simulation game can be organised about a conflict or a peace deal. Each assignment will be analytical and will reflect the application of the relevant literature/theories. Different deadlines will be applied to different assignments. Class participation will also be taken into account in the assessment.

SSC2039   *History of Western Political Thought*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences & Humanities	No

Prerequisite
COR1004 Political Philosophy.

Recommended
HUM1007 Introduction to Philosophy.

Objectives
- To provide students with a basic grasp of the evolution of political thought in the Western tradition.
- To teach students how to study historical works of philosophy.
- To identify how issues and questions in contemporary politics and contemporary political thought have their roots in historical writings.

Description of the course
When considering modern political issues it is often instructive, and sometimes humbling, to realize that many such issues have deep historical roots. For as long as human beings have been living together in societies, questions concerning how these societies should be organized have been asked. The answers that historical writers have given to these questions are still relevant today and still inform current political thinking. By investigating the questions historical philosophers were grappling with and how they sought to answer them, we may perceive more acutely the questions facing our societies and discover how we might answer those questions.

We will study important texts by a number of seminal political thinkers in the Western political tradition , from several periods in history. Our aim will be to understand the particular problems they were seeking to solve and how or whether they did so. Although the main texts we will use are historical, the methods we will use are analytic. We will also read several modern texts, which take up themes from these historical texts. By applying the tools acquired in Political Philosophy (COR1004) to these texts, we will be able to come to terms with them and apply historical insight to current issues.

Literature
- Cahn, S. (2005/2011/2015). *Political Philosophy*. OUP, Oxford. (All editions are acceptable).
- Several pieces of modern secondary literature in an E-Reader available on Student Portal.

Instructional Format
Tutorial group meetings.

Examination
Two take-home exams with open-ended essay questions.

SSC2042   Rights of the Child

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
Law and Legal Reasoning.

Objectives
The course aims to enable students to become familiar with the content of international children's rights, and allow them to gain a critical understanding of both theoretical and practical challenges facing the legal protection of children's rights. The module will allow students to develop an understanding of a child-centered approach when analysing policies, social practices, legislation, and court decisions concerning children. This course is focused on the *legal* protection of the rights of the child. As such, the main objective is for students to gain knowledge of the legal rules and their operation, and to develop and refine their skills in understanding and applying these rules.

Description of the course
Central to this course is the international legal framework for the protection of children. In this course, we will examine and assess the United Nations Convention on the Rights of the Child (CRC) and the broader framework of international human rights law relevant to children. While the focus is on legal rules, law does not exist in a vacuum, and legal rules must be seen and evaluated in their broader context. Therefore, throughout this course we will be critically assessing the law, and attempting to understand legal rules as part of the broader societies that they seek to regulate and in which they exist.

Literature
There is no required text book and readings are – whenever possible – made available electronically.

Course structure

The course is structured in two main parts. Part I consists of the first six tutorials. This part examines more general and basic concepts, including the nature of the rights in question, and broader issues on the legal framework related to children's rights. A considerable proportion of this time will focus on the basic principles of the CRC. Part II consists of the final five tutorials. This part explores selected issues related to the rights of the child, such as violence against children, children in international criminal law, and statelessness.

Instructional format
Tutorial group meetings supported by (guest) lectures.

Examination
Case/legislation commentary (40%) and final take-home exam (60%).

SSC2043 Development Economics

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite

SSC1027 Principles of Economics. Knowledge of basic quantitative concepts such as reading and working with graphs and simple equations is also a prerequisite.

Objectives

- To provide participants with an overview of the major characteristics of, and conceptual approaches to economic development and the public policies that are used to stimulate it; these topics include, inter alia, economic growth and population dynamics, education, health, migration, institutions, and environment.
- To deliver the skills needed to analyze real-world economic development experiences and approach them in a rigorous and critical way.

Description of the course

The long-run economic development of countries, as well as inequality within countries are the major topics of this course. The course will review the major conceptual approaches to economic development, and apply those to the actual experience of countries. In this way, the global variety of development experiences becomes a central to[pic of the course, addressing topics such as investment, trade, building institutions, population dynamics, education, health, and migration. The material that we cover suggests that inequality of the distribution of income resulting from differences across the population in terms of access to education, health services, or infrastructure can be a major obstacle to economic development. Throughout the course, public policy options for stimulating development are made central, especially in the assignment that students will carry out.

Literature

- A textbook on economic development (to be decided).
- Other reading materials will be indicated during the course.

Instructional format

Tutorial group meetings, group work and student presentations.

Examination

The final grade will be based on the assignment, in-class participation including presentation and a final examination.

SSC2046   Globalization and Inequality: Perspectives on Development

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences & Humanities	No

Prerequisites
Academic Skills Training or equivalent University-level writing skills preparation.

Objectives
- To understand and analyze development issues in the light of globalisation and inequality from several disciplinary perspectives and recognise links between globalisation, inequality, poverty and development.
- To understand theories, concepts and historical roots of global social, political and economic inequality as well as understand contemporary issues in development and the developing world, in particular:
  - Global agencies of development
  - Democratisation, human rights and development
  - Health and development
  - Global migration and remittances
  - Food security, natural resources and global crises
- To gain knowledge of the main global and international actors and networks in the field of development, including their aim, impact and effectiveness.
- To analyze changes in 21st century geopolitical perspectives on development, such as the growing impact of 'emerging' countries like China and 'new' South-South partnerships.
- To develop insight in the relations between the various global crises and recent development policies.
- To use the accumulated understanding and knowledge to envision future development scenarios.

Description of the course
This course critically examines structural issues of development through a lens of globalisation. Globalisation refers to the increasing interdependence of markets, states and civil societies and the resulting effects on people and their environment. By also focusing on inequality –that is, the structural differentiation among actors in terms of access to means, opportunities and resources– issues of (re-)distribution are taken into account as well. The course investigates inequalities and interdependencies on a global, international, national and local level, while considering the role of public, private and civil society actors. Thus, it aims to understand underlying development processes and unlock ongoing debates. The course focuses on the following themes: globalisation and development; the Global Goals for Sustainable Development; history of inequality; agencies of development; democratization, human rights and development; health and development; global migration and remittances; and food security, natural resources and global crises.

Literature
- Hopper, P. (2018). *Understanding development*: 2nd edition fully revised and expanded. Cambridge: Polity.
- Relevant academic articles, reports, book chapters and websites.

Instructional format
Tutorial group meetings, lectures, group work and presentations.

Examination
Group presentations, a group paper and a take-home exam.

SSC2048 Intermediate Microeconomics

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisites
SSC1027 Principles of Economics.

Recommended
SSC2061 Statistics I.

Students taking this course should be prepared to use and manipulate basic mathematical expressions. A good knowledge of the analysis of common functions and their derivatives will be an asset for the course.

Objectives
- To introduce students to the basics of microeconomic theory.
- To acquire skills in applying its analytical tools to real-life economic problems.

Description of the course
Economics is the study of exchange and tradeoffs. Questions about what to buy, what to produce and how to allocate time all involve tradeoffs between different alternatives, and economists develop models to better understand the process by which individuals and firms make such decisions. With these models in hand, economists can then develop criteria by which to judge the efficiency and effectiveness of market structures, policies and institutions.

This course is a first introduction to microeconomics. It will present an overview of the basic models that constitute the foundations of modern economics. We will build the theory of the consumer and the producer from the bottom up to create models of market behavior. The goal is not to offer a complete description of the world as it exists; rather, we will seek to simplify reality with the goal of providing a concise description of a broad class of real-world circumstances.

As we progress we will touch on examples of theory in applied settings to highlight and discuss how these models characterize much of the economic behavior we observe in the real world. After developing models of the market as a whole, we'll explore extensions of the theory to the strategic behavior of firms and individuals. The theory of strategic behavior will then be used to analyze, among other things, competition policy, environmental policy and political competiton between parties.

Literature
- Varian H. *Intermediate Microeconomics*. (9th ed.). W. W. Norton & Company.

Instructional format
There will be two regular, weekly tutorial group meetings supplemented by a number of lectures. The first lecture will introduce the course organization and content, and review the relevant mathematical background necessary to follow the course.

Examination
Participation grade, writing asignment and a final exam.

SSC2050   Psychology and Law

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	Yes

Prerequisite
SSC1005 Introduction to Psychology.

Recommended
SSC1007 Introduction to Law and Legal Reasoning and/or an interest in Law.

Objectives
The aim of the course is to provide students with knowledge about the application of psychology to the legal system. By the end of the course, students should
- be able to identify current issues and controversies in the field of Psychology and Law;
- be able to describe methods and tools typically used in this field and experiments that have been conducted;
- be able to list ethical dilemmas that occur when collecting data and running experiments with human participants;
- be able to provide reasons why raising awareness about the problems that arise when psychology is applied to law in practice are crucial;
- be able to describe and analyze cases by applying various tools and methods.

Description of the course
This course focuses on applications of psychology to the legal system. It will provide students with insights and knowledge about typical themes within legal psychology. Such themes range from how reliable eyewitness testimonies in court are to whether criminals have a brain dysfunction making them permanently dangerous to society, to the role of experts in court. The role of psychologists within these themes is to ask questions that have a direct relevance to the legal arena and to conduct research to address these questions.

Through working with cases, students will be familiarized with various issues in the field in this course, for example police procedures, legal backgrounds, psychological experiments and the disputes that arise when psychology is applied to the law. Moreover, several small exercises in class will give students the opportunity to get a small taste of which tests and procedures are used by academics and professionals working in the field.

Drawing from areas of social, cognitive, developmental, clinical, and neuropsychology this course will deal with questions such as: How dangerous are sex offenders? Are all criminals competent to stand trial? How reliable are lie-detector tests? What is the role of expert witnesses in court? What are the dangers of bias in expert testimonies?

Literature
- Book: Costanzo, M., & Krauss, D. (2012 or 2017). *Forensic and legal psychology. Psychological science applied to law.* New York: Worth Publishers.
- E-reader.

Instructional format
Tutorial group meetings and (guest) lectures.

Examination
Assessment is based on a written assignment and a final exam at the end of the course.

SSC2053   Public Health Policymaking

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
None.

Objectives
- To make students familiar with basic issues in public health.
- To make students familiar with basic issues in public policymaking.
- To make students familiar with basic issues in public policymaking on public health.

Description of the course
In this course about public health and public policymaking students will become familiar with several interesting and interrelated topics.

First of all, this course will give insight in the meaning of health and public health, how (public) health can be conceptualized, how (public) health can be measured according to indicators and which determinants influence (public) health and what (future) challenges we face or will be facing in the area of (public) health.

Secondly, students will become familiar with the key concepts of public policymaking. In particular, the course will address the policy cycle (problem recognition and definition, agenda building, policy formation, policy implementation, policy evaluation and feedback) as well as the analytical guideline for health policy analysis showing the interaction between the policy actors or stakeholders, the policy context and the policy process.

Finally, students will learn to combine the knowledge gained under the first and second objectives. Concretely, they will learn to understand the implications of public health issues for public health policymaking. How does public health policymaking work in reality under crisis circumstances, like the corona virus outbreak in China? And how does public health policymaking work in reality under non-acute circumstances where a shift in responsibility can be seen from government (central steering) to governance (decentral steering)? Special attention will be paid to health inequalities in public health, the role of genomics in public health and the importance of economic evaluation in public policymaking, raising ethical and solidarity issues.

The course is set up as a multidisciplinary course. There are contributions from political science, public health, medical sociology, health economics, health ethics and public health genomics.

Literature
- Buse K, Mays N, Walt N. Making Health Policy (2nd edition). Berkshire: Open University Press, 2012. Additional literature can be found for each assignment.

Instructional format
Lectures accompanied with associated tutorial group meetings.

Examination:
A presentation, a paper and a written test.

SSC2055   Entrepreneurship

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisites
SSC1005 Introduction to Psychology **or** SSC1029 Sociological Perspectives **or** SSC1027 Principles of Economics **or** a first year undergraduate business course.

Objectives
To provide an understanding of the how, where, when, whom and why of entrepreneurial initiative. However, our ambitions go beyond helping you to learn, we also want you to feel (more) empowered to engage in the entrepreneurial process itself:
- You are able to explain and illustrate the unique qualities of the entrepreneurial process.
- You are able to explain and illustrate the unique qualities of entrepreneurs.
- You are able to explain how entrepreneurial opportunities are discovered and selected.
- You are able to explain how entrepreneurs link value creation to value appropriation.
- You are able to explain the importance of entrepreneurial networks and ecosystems.

Description of the course
Not many will contest the societal impact of enterprising individuals and entrepreneurial ventures on our economies. Entrepreneurs may start-up companies that challenge (and often replace) incumbents. In the process, they create new jobs and apply competitive pressure on established firms. Entrepreneurs supposedly have an important direct and indirect effect on driving innovation. Despite the heroic image of successful entrepreneurs, entrepreneurship is much more about failure than about success. What motivates entrepreneurial types to venture of on a path that will often result in failure?

In this course you will study factors that drive entrepreneurs and the entrepreneurial process. We will focus on new venture gestation: the initial stages of the process that may result in a new company to emerge. Throughout the course you will explore how entrepreneurs not only rely on generic business management principles, but also how they cope with the uncertainty, risk, scarcity of time, capital and other resources that is inherent to all entrepreneurial venturing. Perhaps you will conclude that many entrepreneurs are in fact not really good managers (good entrepreneurs will compensate for this by hiring better managers).

We start the course by exploring the process dynamics of entrepreneurial activity. We then will explore the origins of entrepreneurial opportunity, review how entrepreneurs screen and develop the opportunities that they discover, and you will unravel how entrepreneurs seek to appropriate the returns from their enterprising behaviour and benefit from or contribute to entrepreneurial networks and ecosystems.

This is not a "how-to" course, instead the course will introduce you to relevant scholarly insights that provide (future) entrepreneurs, an evidence base for entrepreneurial action. Those students that are ready to enact entrepreneurship may want to contact the recently founded Center for Entrepreneurship and Innovation supporting enterprising students and alumni.

Literature
- List of academic articles (1 compulsory and 1 chosen out of 5, per session).

Instructional format
Tutorial group meetings. In the tutorial group meetings you explore the literature and you contribute by having a connected case (one-pager) prepared. The biography project invites you to link your learning to the life history of an entrepreneur. There is a group project.

Examination
Student evaluation will be based on 1) a take-home midterm test, consisting of open questions; 2) class participation (including one-papers); 3) a group presentation on a regional entrepreneurship topic and 4) the biography paper.

SSC2059   Social Movements

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
SSC1029 Sociological Perspectives PLUS at least ONE of the following: SSC1025 Introduction to Political Science, SSC1003/SSC2065 Theories of Social Order, SSC2019 Social Psychology, SSC2028 Classical Sociology, or SSC3038 Contemporary Sociological Theory.

Objectives
- To become conversant in the major questions driving social movement research.
- To become conversant in the key theories and concepts driving social movement research.
- To become conversant in the primary methods driving social movement research.
- To evaluate and assess social movement research in a critical and constructive manner.
- To design a case study and initiate an original empirical study of social movements.
- To reflect on the relevance and utility of studying social movements.

Description of the course
This course is designed to introduce students to the sociological study of social movements. An overview of the field will be provided by identifying key concepts, theories and methods through examination of a variety of case studies. Salient themes addressed will include: democracy, identity, globalization, civil rights, environmentalism, gender, sexuality, class and ethnicity/race. While much attention will be placed on social movements within Europe and North America, a global-comparative perspective will be periodically emphasized. The over-arching goal of the course will be to reveal the ways in which social movements work to both produce and resist social change. Some of the main questions addressed in the course will be: What is a social movement? Why do people join social movements? How do movements gain/lose momentum? What is the relationship between social movements and democracy? And, under what conditions do social movements 'succeed'?

Literature
- E-reader.

Instructional format
Tutorial group meetings.

Examination
Final paper or take home, one reflective essay and one presentation.

SSC2060   Comparative Constitutional Law

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisites

SSC1007 Introduction to Law and Legal Reasoning or SSC1009 Introduction to European Integration or SSC2011 European Integration; History and Theory or SSC1025 Introduction to Political Science.

Objectives
- To get students acquinted with the political and constitutional systems of a number of European countries and the United States.
- To introduce students to the overarching concepts of constitutional law.

Description of the course

In this course, we study basic concepts of constitutional law. Particular attention is devoted to: the functioning of a state, different systems of government and the concept and application of the principle of separation of powers.

Furthermore, different electoral systems and different mechanisms governing the relations between the executive and legislative branches of government will be discussed. The issues of federalism and bicameralism will be analysed. Finally, the rules governing constitutional review will be discussed, together with the issue of fundamental rights protection. These themes will be addressed with regard to the American, German, French, British and Dutch legal systems.

Literature
- Heringa, A.W. (2016), *Constitutions Compared - An Introduction to Comparative Constitutional Law.* (4th Ed.) Antwerp/Oxford: Intersentia.
- S. Hardt and A.W. Heringa, eds. (2014), *Sources of Constitutional Law*, Antwerp/Oxford: Intersentia.

Instructional format

Tutorial group meetings and lectures. Discussions in tutorial group meetings are based on problem scenarios and tasks from the coursebook.

Examination

The final grade is based on the results of a mid-term exam consisting of a paper and a final written exam comprising essay questions.

SSC2061   Statistics I

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	2 / 5	5	Social Sciences	No

Prerequisite

SCI1010 Basic Mathematical Tools. Students with substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii) can contact the coordinator to request a waiver.

Objectives

- To perform your own (first) research using quantitative techniques.
- To develop the abilities to read, understand and criticize scientific articles in the domain of your study or work that use quantitative techniques.
- To gain experience in actively performing such a quantitative analysis yourself, making use of applets provided through the internet.

Description of the course

The course Statistics I provides a general introduction to quantitative research methods commonly used in social and life sciences. Emphasis is on methods of data collection and types of data, descriptive statistics, regression modeling, discrete and continuous random variables, and inferential statistics: the construction of confidence intervals, hypothesis testing, null and alternative hypotheses, p-values. The structure of the course is based on a new paradigm in teaching statistics: that of a simulation and randomization based approach (please see http://www.youtube.com/watch?feature=player_embedded&v=5Dnw46eC-0o for an intuitive motivation). This instructional principle departs from the classical statistics curriculum of first covering descriptive statistics, next discuss probability theory and models of random variables, continue with sampling theory, to deal with inferential statistics only in the very end of the course. Randomization-based courses make a drastical change, and start with inferential statistics from the very beginning. A crucial element in the new approach are the applets you will find in the internet, and that allow you to simulate many samples from a hypothesized population, or from a known population, in order to visually clarify statistical concepts.

Active learning is based on solving 5 or 6 statistical explorations from the text: four collaboratively, in the two tutorial sessions, and 1 or 2 individually, at the end of the week. Next, an important role in this course is for the student project. This project starts in the first weeks, with students working with surveys, and in doing so, collecting data on student characteristics, such as metacognitive abilities and general study styles and habits. In the Student project, you will perform a statistical analysis of your own data, and after collecting the data of all students, you will develop a statistical model that explains students' achievements in terms of background variables and input factors.

Literature

- Introduction to Statistical Investigations, Preliminary Edition, by Nathan Tintle, Beth L. Chance, George W. Cobb, Allan J. Rossman, Soma Roy, Todd Swanson, Jill VanderStoep (tentatively).

Instructional format

Besides the lectures, there are two weekly tutorial sessions. In these meetings, we will be working on statistical explorations with the help of simulation applets, so the availability of a laptop is of great advantage.

Examination

Final exam, writing and providing peer feedback for six weekly explorations, and a final essay for the student project.

SSC2062   Foundations of Cognitive Psychology

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences & Sciences	No

Prerequisites
SSC1005 Introduction to Psychology or SCI2036 Artificial Intelligence.

Objectives
- To give students an overview of the study of the human mind as an information processing machine over time and to provide insight into the foundations of cognitive science.
- To make students familiar with the basic concepts used in theories on human information processing and the experimental designs used in cognitive psychology.
- To provide an insight into the character of cognitive processes; various forms of perception, learning, thinking, etc.

Description of the course
The mechanization of thought (i.e. regarding the human mind as an information processing machine) has always repelled and attracted psychologist and philosophers after the scientific revolution of the 16th and 17th centuries. As a result, human thought wasn't always the topic of psychology, especially at the time of the rise of radical behaviorism in the early 20th century. Anything referring to mental processes was not to be used in explanations of human behavior. However, with the inventions of computers that could mimic behavior, in combination with the failure of behaviorism to account for even the simplest of human behavior, the mind was back in psychology. And back with a vengeance. During the '60 and '70 of the 20th century information processing theory became the leading paradigm in psychology and to this day remains a major influence, as seen e.g. in the field of Cognitive Neuroscience. Information processing theory utilizes concepts of computation and representation and deals with how people receive, store, integrate, retrieve, and use information.

The present course is concerned with theoretical and empirical perspectives on human cognition, perception and the experimental methods to study cognition and perception. Eleven basic topics of cognitive science/ psychology are discussed using a Problem Based Learning format. The first part of the course deals with basic concepts in cognitive science, the second part applies them to major topics in psychology. The topics studied in the course are amongst others: The history of the study of the human mind as information processing machine, computation, representation, top down and bottom up processing, semantic networks and spreading of activation, imagination, attention, language, emotion etc.

Literature
- E-reader available on Student Portal.
- Several chapters from basic cognitive psychology textbooks (There is not one single basic book that covers all topics, hence the chapters of several books are available as an E-Reader or hardcopy at UCM's reading room and the UM library)

Instructional format
Tutorial group meetings and lectures.

Examination
A final essay and an exam.

SSC2063   *The Psychology of Individual Differences: Personality and Intelligence*

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	No

Prerequisite
SSC1005 Introduction to Psychology.

Objective
- Gain insight into the two key subdivisions in the study of human individual differences: personality and intelligence.

Description of the course

This course will provide you with knowledge on the most important scientific theories and empirical findings on personality and intelligence. You will learn why and when a person behaves in a different way than someone else and how personality impacts what will happen to us in our life. We will also discuss practical applications of theory and research findings and learn to apply measurement techniques for assessing individual differences.

You will learn about different theoretical conceptualizations and measurement approaches of personality and intelligence. Based on the purpose of the assessment, different methods may prove more or less useful. You will also discover different explanations for why people differ in their personality and their level of intelligence. We will look at physiological, evolutionary-genetic as well as contextual explanations. Further, you will take a closer look at the relationship between personality, intelligence and meaningful life events. What personality traits are important for marital satisfaction and what characteristics make us become a criminal? But also – how does becoming a parent or getting a new job change our personality? Lastly you will be introduced to real life applications of knowledge on personality and intelligence. Specifically, we will discuss how this knowledge is used in clinical settings (e.g., when having patients with a personality disorders) and in organizational settings (e.g., for personnel selection purposes).

Literature
- Larsen, R. J., Buss, D. M., Wismeijer, A., & Song, J. (2017). Personality Psychology: Domains of knowledge about human nature. Berkshire, UK: McGraw Hill Higher Education.

Instructional format
Tutorial group meetings.

Examination
Presentation (30%) and Take-home exam (70%).

SSC2064   Migration Studies: Flows and Concepts

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisites
None.

Recommended
SSC1025 Introduction to Political Science or SSC1006/SSC2002 International Relations: Themes and Theories.

Objectives
- To provide students with a basic overview of migration flows and concepts.
- To give insight into the complexity of human movement.
- To acquaint students with different cases and examples of the various global migration flows.

Description of the course
This course will examine the following concepts in contemporary migration studies: forced migration and refugees; irregular and transit migration; integration and transnationalism; and return migration and reintegration. The course will introduce students to both the complexities and challenges of migration and the potential positive effects of migration. Throughout the course, multiple case studies will be examined to highlight different migrant concepts and flows.

Literature
We will consult several journal articles in the reference list.

Instructional format
Tutorial group meetings and lectures.

Examination
Participation, a mid-term assessment and a final assignment.

SSC2065   Theories of Social Order

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
SSC1029 Sociological Perspectives or SSC2028 Classical Sociology or COR1005 Theory Construction and Modelling Techniques

Objectives
- To introduce students to the way classical and modern sociologists theorize about society and in particular, to introduce students to a core theoretical issue in the social sciences: the problem of social order.
- To develop skills in identifying and analyzing theoretical arguments.
- To understand how sociologists use different types of evidence to understand society.
- To apply abstract theories to new concrete empirical situations.

Description of the course
I the past decade, societal order seemed to be under attack in many Western countries. Activists from the right and the left challenged existing orders and increased societal strife. Political polarisation has eroded social cohesion and pitted people against one another. And then, the covid-19 pandemic struck.

BLM, #MeToo, alt-right movements, mass shootings, popular uprisings, police violence, fierce debates about climate change and gender equality and LGBTQ-rights and rising inequalities: they all relate to social order in one way or another. In tempestuous times, questions about social order become important. What makes society work? What unites us? What divides us? In "Theories of Social Order", we use a sociological perspective to study the different types of glue that hold societies together. For sociologists, the root of the problem of social order lies in the sometimes conflicting interests of individuals and those of groups (and societies. Whenever individual interest conflicts with group interest, social order is at risk. A solution to the problem requires the reconciliation of individual and collective interests, but how to do that is not a given. Theorists have provided several answers to this vexing question.

We consider five mechanisms that produce social order: individuals, hierarchies, markets, groups and networks. Foundational texts by classic sociologists are combined with contemporary extensions and empirical applications on contemporary problems of social order, i.e. (1) political polarisation in the US and Europe, and (2) the corona pandemic. The editorial introductions by Hechter & Horne provide the background for each of these texts and link them to the central problem. The strengths and weaknesses of the various theories are discussed, by relating them to contemporary events whenever feasible. We also explore how to test theories against evidence. In this way, students will improve their understanding of the social world and will learn to apply the analytical tools to real-life phenomena.

Literature
- Hechter, M. & Horne, C. (2009). *Theories of social order. A reader*. 2nd edition. Stanford University Press.
- E-reader.

Instructional format
Tutorial group meetings and lectures.

Examination
Grading will be based on participation during the tutorials, an individual paper on a problem of social order and a pitch of the individual paper in an oral presentation session.

SSC2070   *Social Studies of Finance: The Making (and Taking) of Value in the Financialization of Our Lives*

Semester	Period	ECTS	Concentrations	Device Free
Spring	5	5	Social Sciences & Humanities	No

Prerequisite

Either one of the following courses: SSC1007 Law and Legal Reasoning, SSC1025 Introduction to Political Science, SSC1027 Principles of Economics, SSC1029 Sociological Perspectives, HUM1010 Common Foundations of Law in Europe, HUM2046 Living in a Technological Culture: Introduction to Science and Technology Studies.

Objective
- To introduce histories and theories of money and finance
- To critically analyze practices of finance and financialization
- To relate social studies of finance to current issues

Description of the course

What is financial value, and what is the value of finance? In this course we will evaluate the global reach and local impacts of our current financial system, including the financialization of more and more aspects of our everyday lives like housing, education, work, medical care, retirement, and even art. From a variety of perspectives, we will learn about the histories, practices and theories behind the crises-struck but seemingly inevitable rise of finance into the 21st century.

      The way we know about money and finance today is changing. In fact, a global economic crisis has become a crisis of orthodox Economics. But, what exactly *is* a crisis, and who decides? In November 2008, only weeks after the Lehman Brothers bankruptcy, Queen Elizabeth inaugurated a new building at the London School of Economics. Referring to "the financial crisis", she asked the professors: "Why did nobody notice it?" In a written reply, the scholars explained that the reason "was principally a failure of the collective imagination of many bright people, both in this country and internationally, to understand the risks to the system as a whole." This course introduces attempts to re-imagine our knowledge of money and finance by many "other" bright people, among which anthropologists, sociologists, psychologists, historians, philosophers, artists, and even some economists. We will discuss contested notions of public and private ownership, debt and investment, speculation, risk and uncertainty, as well as regulation and taxation. Instead of dealing with business cases, the course explores different fields of finance ethnographically, providing glimpses of the worlds of central banking, corporate- and shadow banking, private wealth management, and new digital financial technologies also known as "fintech". Based on these examples, we will consider the meanings of financial vocabularies (e.g. those of collateral and leverage), as well as the legal codes of financial derivates (such as credit default swaps). We will analyze capitalist ethics of growth and financial profitability, as well as the ideals and rhetoric of trust and transparency that often clash with opaque realities of corruption and fraud. Projecting the dominant temporalities and politics of finance against an urgent backdrop of global humanitarian and ecological crises, we will learn that price is not to be equated with value(s). But how do the values of finance affect us today, and what are the prices we are willing to pay for the failures of its imagined futures?

Literature
- Mader, P., Mertens, D, and N. van der Zwan (2019). The Routledge International Handbook of Financialization. Routledge, London
- Academic articles and book chapters
- Legal instruments and policy documents

Instructional format

Lectures, workshops, and tutorial group meetings.

Examination

A mid-term review writing assignment about a topic of choice and a final take-home exam featuring open essay questions.

SSC2071   Latin America: history, politics and cultures

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
None.

Recommended
SSC1029 Sociological Perspectives, COR1003 Contemporary World History.

Objectives
- To broaden students' perspective about geographies and histories beyond Europe and the industrialized world, while recognizing the interconnectedness between these histories.
- To introduce students to Latin American history, politics and cultural diversity, and the most pressing issues within that region of the world.

Description of the course
What do you know about Latin America? In broad terms, "Latin America" refers to a group of countries in the Americas that share a historical experience and language. However, any attempt to describe a whole continent carries the risk of overgeneralizing. After all, America is a mass of land that Europe only came to know existed a little more than 500 years ago. The idea of a "Latin" America is even more recent. This course expects to offer different perspectives to think about Latin America, debunk stereotypes, and provide students with an overview of Latin American societies' key debates and social issues.

We will begin by reflecting on "the idea of Latin America" from the standpoint of decolonial theory. We will look at the history of the conquest and colonization, and the challenges faced by the new independent states during the XIX century. Discussions will also include the well-known military regimes and state violence of the second half of the XX century, the struggles for constructing a public memory of human rights violations, the US-Latin American relations, the problem of narcotraffic, and the Pink Tide governments. Transversal topics will be ethnicity, race gender and inequality, and the links between Europe, the US and Latin America from colonial times to the present. We will pay special attention to the social struggles of marginalized groups and the alternative politics of black and indigenous social movements.

Literature
- Selected sections from Charlip, J. A., & Burns, E. B. (2016). *Latin America: An Interpretive History*: Pearson.
- Selected articles and book chapters.

Instructional format
Tutorial group meetings and lectures.

Examination
Group presentation (30%), final take-home exam (70%), attendance and participation.

SSC3002 European Foreign Policy

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	Yes

Prerequisites
SSC1025 Introduction to Political Science or SSC1006/SSC2002 International Relations: Themes and Theories, and SSC3030 The Law of European Institutions or SSC1009 Introduction to European Integration or SSC2011 European Integration; History and Theory.

Objectives
- To understand the history and the complexity of European Foreign Policy.
- To understand the political-institutional process in which EU Foreign Policy is made.
- To grasp the content of European Foreign Policy.
- To understand relations with important regions and particular states that the European Union has established strong foreign policy relationships.

Description of the course
The course is divided into three sections. The first section will start with a focus on the importance of European Foreign Policy for foreign policy analysis and vice versa. It will also consider what theories in International Relations can help explain the conduct of European Foreign Policy. This section will then move on to consider the institutional framework of the EU's foreign policy, the role of the Member States in the formation of policy and then finally consider in more detail the main external relations policies themselves . The main policy areas include Common Defense Policy, Common Security Policy, Economic and Trade Policy and Enlargement Policy.

The second section deals with the important regions and particular states that the European Union has established strong foreign policy relationships. These important regions and states include the United States, Russia, the Developing world and Emerging Economies. The third section ends with a consideration of the EU's future role as a global player.

Literature
- Christopher Hill, Michael Smith, and Sophie Vanhoonacker. 2017. *International Relations and the European Union*. Third Edition. Oxford University Press. ISBN: 9780198737322.
- E-readers.

Instructional format
Tutorial group meetings and lectures.

Examination
A final exam (consisting of multiple choice questions, true and false questions and essay questions), a constructive learning assignment (creating your own exam questions)* and a research paper. *If covid-19 is still not allowing in-class exams, the exam will be take-home essay exam.

SSC3006 The Social Study of Environmental Problems: Between Nature, Society, and Politics

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences/Humanities	No

Prerequisite

At least one 2000-level Social Science Course. OR HUM3049 Science, Power and the Construction of Facts

Recommended

It is an advantage if you have passed one of the following courses: HUM3049 Science, Power and the Construction of Facts, SSC1029 Sociological Perspectives; SSC2028 Classical Sociology, SSC3038 Contemporary Sociological Theory, SSC3056 Innovation Systems, Policy and Sustainability Transitions; SKI1004 and SKI1005 Research Methods I and II.

Objective

- To introduce students to central themes and concepts in the interdisciplinary social study of the environment.
- Enables students to engage in normative reflection and valuation of major socio-ecological challenges.

Description of the course

Environmental problems such as chemical pollution, global warming, acid rain or species loss are both material effects of the human interaction with nature and nexuses of social practice and political contestation. This course probes the entanglements of nature, society, and politics through which the environment is formed, experienced, problematized, interpreted, and contested, and governed in different socio-cultural contexts. It helps students to develop a critical perspective on the dominant patterns of industrial production and consumption, and to ask how our societies can be made more sustainable. The course draws on insights from environmental history, environmental sociology, science and technology studies, sustainability studies, and recent debates on the "Anthropocene".

Thereby, it seeks to complement the fact-oriented perspective of the natural sciences with a reflective understanding of the politics through which our knowledge (and non-knowledge) of the environment is formed. The course is structured in four sections. The first three each focus on one core domain of nature-society-politics: the risks of industrial production; biodiversity and land; global climate change. The final section reflects on how we can move from these insights towards a comprehensive understanding and transformative politics of the Anthropocene.

Literature

- E-reader with academic articles and book chapters from environmental sociology, political science, science and technology studies, human geography.

Instructional format

Tutorial group meetings and lectures.

Examination

Discussion paper (60%), take-home exam (mini-essay) (40%).

SSC3008   Middle Eastern Politics

Semester	Period	ECTS	Core	Device Free
Fall	2	5	Social Sciences	No

Prerequisite
SSC1006/SSC2002 International Relations: Themes and Theories

Recommended
COR1003 Contemporary World History

Objective
- To critically investigate and analyse the historical and political processes and actors in the Middle East and their impacts on the contemporary economic, social, cultural and political landscape in the region.
- To assess the effect of the local, regional and global power relations and rivalries in the Middle Eastern states and societies. To look critically into the role of these relationships in the 'making' and in the 'representation' of Middle East.
- To understand several significant historical issues, actors, ruptures, critical turning points and transformatory processes in the region.
- Linking these historical processes to the study of Middle East today and trying to make sense of contemporary events, conflicts, actors and issues in the Middle East.
- To explore the role of bottom-up and top-down processes, discourses, subjectivities and identities; to bring sub-altern, hidden, silenced, invisible and irrelevant to the surface.

Description of the course
Middle East is not only a geographical region or location. It is also a politicised and highly contested concept whose representation sometimes overshadows the actual reality. Middle East has always been a subject in political and academical debates thanks to its controversial history, its demography and its major actors; in economic debates due to its natural resources; in security debates due to the wars and conflicts that affect(ed) the whole global structure. It is infamous with some powerful, undemocratic and repressive political regimes, while at the same time hosting extremely vivid civil societies, record amount of bloggers and online youth activism. It has been an arena where great powers tried to extend their political, ideological and economic ambitions (even their own fights) and intervened almost regularly. For some, the Middle East is a common and generic name for those societies which share the same religion, language, history and culture. For more careful observers, it is an extremely diverse area where various groups speaking different languages and practicing distinct religions for centuries. For critical minds, the Middle East is not an objective and neutral space but a politically constructed concept which is re-produced through certain discourses, representations and practices.

In any ways, the Middle East has always been a birth or meeting place of complex combination of significant political, social, cultural, religious, ideational and economic actors, issues and movements. Our purpose in this course is to shed a light on this incredibly interesting and debated region and discuss its historical, economic, social and most importantly political 'realities'. This course will investigate the past and the present of the region. In the beginning, the course will introduce the concept of Middle East, not only as a geographical place but also a cultural, contextual, discursive and political concept. Then the course will cover the history of the region and its ongoing effect on the current developments. In this context, major events, ideas, issues, (external and internal) actors and political movements that have been shaping the Middle East will be introduced. In the remaining time, specific and contemporary issues such as interventions in the 21st century, Arab Spring, Syrian civil war and rising rivalries between regional powers will be discussed and critically analysed.

Literature
- International Politics of Middle Easy, Raymond Hinnebush, Second Edition
- Selected articles and scholarly or educational texts
- Visual and online resources

Instructional format
Tutorial group meetings and lectures.

Examination
The format of the mid-term assignment can be chosen by the student (please note that these assignments are subject to some deadlines, rules and to the approval of the tutor). Final is an academic and critical paper. Class participation will be taken into account in the grading.

SSC3009   Public Economics

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

NB: This course was formerly known as SSC2052 Public Economics.

Prerequisite
SSC2048 Intermediate Microeconomics, Basic Calculus (differentiation).

Objectives
- Acquire a structured insight into the important function of the state in modern market economies.
- Learn about the functioning and performance of the state and its interactions with markets.
- Understand and critically reflect upon recent developments and discussions concerning issues of the public sector like inequality, taxation, or climate protection.

Description of the course
Public economics (or public finance) is the study of the role of government in the economy. It deals with the formulation, execution, and effects of government policy, or more generally with non-market mediated policies. This study involves answering the following four broad questions: When should the government intervene in the economy? How might the government intervene? What is the effect of those interventions on economic outcomes? Why do governments choose to intervene in the way that they do?

The government differs from other organizations because it can use legal instruments to enact policies and may also have different goals than other actors in the economy. The typical allocation mechanism for scarce resources in markets is the price mechanism, which – under particular circumstances – aggregates information and preferences of many different individuals in an efficient way. If these assumptions are not met or Pareto efficiency alone is not a sufficient criterion since a particular allocation is "unfair", there might be room for intervention by the public sector. We will discuss arguments for when government intervention is warranted and whether such intervention is beneficial.

This course provides basic knowledge of the functioning and the relevance of the public sector. The topics include (i) market failures such as incomplete information, public goods, and externalities, (ii) issues with fairness, inequality, poverty, redistribution, and taxation, and (iii) political decision-making and elections. These topics will be analyzed from a normative (welfare economic) as well as from a positive (explanatory) perspective, with emphasis on the relevance and limitation of traditional economic theory. After the course, you should be able to reflect and recognize the strength but also some of the limitations of traditional economic theory and interpret some basic empirical evidence. You should also be able to critically assess political and economic discussions pertaining to the public sector.

Literature
- Gruber, J. (2019). *Public Finance and Public Policy*, 6th edition, Worth publishers, New York.

Instructional format
There will be two weekly tutorial group meetings supplemented by weekly lectures.

Examination
Active participation in the tutorial group meetings, student presentation, and a final exam.

SSC3011   *Public Policy Evaluation*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
At least two 2000-level Social Sciences courses.

Objectives
- To develop a critical analytical approach to public policy evaluation, analysis and public policy making.
- To provide students with a basic understanding of the key concepts, approaches, models and methods of public policy analysis & evaluation.
- To develop the basic skills needed to conduct public policy analysis & evaluation and to communicate the results effectively.
- To provide students with an understanding of the roles and ethics of the policy analyst/evaluator in the policy process.

Description of the course
This course provides students with an academic and at the same time practical and 'hands on' approach to the study of public policy and more in particular, to the professional practice of policy analysis and evaluation. Public policies can be described as "a course of government action or inaction in response to public problems" such as insufficient access to health care or education, environmental degradation, threats to workplace safety, corruption, overcrowded highways or air pollution (Kraft and Furlong 2010:5). Problems range from relatively simple to highly complex and manifest from the local to the national or global levels. They can reflect conflicts over causes, solutions, problem definitions as well as over fundamental human values. Decision-makers that take final decisions on these issues need to be informed by sound evidence based policy analysis and evaluation that has carefully weighted, crafted, prescribed and evaluated the policy alternatives. This is important as the decisions taken do not only affect people's lives, but also influence society's key values. It is the task of the policy analyst / evaluator to provide sound evidence, analysis and advice. To acquaint students with, and prepare them for such undertakings, this course is designed to foster critical thinking and understanding about public policy and possible alternative courses of action by deliberating and analyzing the key concepts, models, approaches and methods of policy analysis & evaluation, and practicing some of its basic skills.

In the first week of the course students explore what policy analysis & evaluation actually is. It intends to shed light on the role of power, politics, institutions and actors in the policy making process. Subsequently, in the second week the art of problem structuring is explored. In the third week students will be introduced to working with evaluative criteria and choosing policy options for formulating policy advices. With the knowledge gained in these first three weeks students will work in small groups to prepare and present a 'hands on' a policy advice on a real life country case. Finally, just before the midterm exam, students are introduced to two frequently used methods of policy analysis and evaluation: cost benefit and cost effectiveness analysis. The midterm exam consists of two parts: an individually written policy memorandum on a given topic (part 1) and, on the basis of that memorandum, a team role play (part 2 of midterm). After the midterm the focus shifts from having gained the basic knowledge for policy analysis and evaluation (problem structuring, stakeholder analysis, choosing evaluative criteria and using them to benchmark and weigh the different policy alternatives) to exploring policy evaluation approaches in more depth. Students will be introduced to plan, process and outcome evaluations on the basis of the realist or theory-based evaluation approach. They will work in small groups on another real life case to actually carry out and present a plan (and or) process evaluation themselves. Finally, ethical and accountability aspects of policy analysis and evaluation, as well as the role of the public in this process are explored.

The course is built around 6 cases (some spread over 2 tutorials) and 6 lectures by both academics and professional practitioners that share their knowledge and experiences with the students. This together with studying academic and policy literature as well as the 'hands on' work on evaluation cases, provide the main guidance for the student's learning process in this policy analysis & evaluation course.

Literature
The course combines book chapters from state of the art text books on policy analysis with articles from academic journals and real life case study material from practice, next to youtube videos and short documentaries. Textbooks from which partial chapters are used:
- Kraft M.E and Furlong S.R. (2013) Public Policy Politics, Analysis and Alternatives, CQ Press, SAGE
- Guess G.M. and P.G. Farnham (2011), Cases in Public Policy Analysis
- Weimar L. and Vining A. (2011) Policy Analysis, 5th Edition, Longman

- Weiss C.H. (1998) Evaluation (2nd ed.), London: Prentice-Hall.

Next to that book chapters, journal articles, youtube videos and short documentaries will be studied.

Instructional format
Tutorial group meetings, team presentations in which gained knowledge needs to be put in practice by working on real life cases, role play and interactive lectures.

Examination
The final grade will be based on the policy memorandum, a role play team briefing exercise and a final policy paper as well as attendance and the quality of participation in tutorial groups and lectures.

SSC3012 *War in World Politics*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	Yes

Prerequisites

SSC1006/SSC2002 International Relations: Themes and Theories or SSC1025 Introduction to Political Science and at least one more 2000-level Social Sciences course.

Objectives

- To understand international conflict.
- To examine different types of conflict and their various causes in the world.
- To examine as case studies different conflicts throughout history.

Description of the course

Why do nations and states go to war? This course will endeavor to give some answers to this question. The course is divided into three sections that mirror the above objectives. The first section will focus on the different types of conflict. In this section, the ethics of war will also be discussed: do "Just Wars" exist? Section two will concentrate on the causes of conflict. It will reflect upon a variety of sources that emerge from such domains as the global system, the states themselves and/or individuals. Part three will examine as case studies a number of modern conflicts, such as World War I, World War II, the Korean War, the Vietnam War, the breakup of Yugoslavia, the War between India and Pakistan, the Arab- Israeli conflict and Saddam Hussein's Wars against Iran and Kuwait.

Literature

- Levy, J. S. and W. R. Thompson. (2011). *Causes of War*. Wiley-Blackwell.
- Stoessinger, J. G. (2011). *Why Nations Go to War.* 11th Edition*.* Thomson, Wadsworth. *Other editions acceptable.
- E-readers.

Instructional format

Tutorial group meetings and lectures.

Examination

A final exam (consisting of multiple choice questions, true and false questions and essay questions), a constructive learning assignment (creating your own exam questions) and a research paper. *If covid-19 is still not allowing in-class exams, the exam will be take-home essay exam.

SSC3017 *Social and Sustainable Entrepreneurship*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Assumed Knowledge

SSC1030 Introduction to Business Administration OR SCI1016 Sustainable Development

Objectives

- On the successful completion of this course you should be able to:
- Critically reflect on social and sustainable entrepreneurship theory and practice
- Identify and evaluate social and sustainable entrepreneurship opportunities
- Develop a strategy for a social/ sustainable enterprise
- Conduct primary research and analyse primary and secondary data in the field of social and sustainable entrepreneurship
- Prepare and present documentation to pitch a novel enterprise idea
- Learn to cope with the chaos and complexity of doing social and sustainable entrepreneurship in the real world.

Description of the course

Interest in the concept of social and sustainable entrepreneurship has been sparked over the last two decades due to increasing complexity of societal and environmental problems. An explicit and central social/sustainable mission, innovation, creativity and a strong market orientation are the distinguishing features of social and sustainable entrepreneurship. Social and sustainable entrepreneurs are committed to furthering a social and/or sustainable mission, and rank social, environmental or cultural impact above, profit. At the intersection of business, government and not-for-profit organisations, these social and sustainable entrepreneurs are now visible and having an impact on a global scale.

This course will provide you the opportunity to learn how you can apply your knowledge and skills to address complex sustainability problems. This course is structured around experiential problem-based learning, providing you the opportunity to synthesise theory and practice as you develop an idea for your own social/sustainable enterprises. Topics will include: critically reviewing concepts; user centred-design of social and sustainable enterprises; frameworks for understanding and strategizing; understanding and reporting social and environmental impact; and cross-sector collaboration.

Literature

- eReader with papers & Harvard Business cases (You need to pay for your cases, approx. €15).

Instructional format

This course utilizes experiential problem based learning as a core teaching and assessment approach. This approach involves you creating an idea for social and/or sustainable enterprise to solve a current problem. Throughout the course you will work with a team of students to develop a social/sustainable enterprise idea that will create positive societal impact. You will work collaboratively with your teammates to develop a pitch based on primary and secondary research. In experiential problem based learning, the problems faced by you as entrepreneurs drive the learning experience. These real life problems will guide your reading, research and interviews throughout the course.

The class involves a mix of lectures, workshops, tutorials and facilitated case discussion sessions. In the lectures and workshops you will apply practical entrepreneurial tools to developing your social/sustainable enterprise idea. In the tutorials and facilitated case discussion sessions you will explore the cases and the academic literature. In the facilitated case discussion sessions you will explore how the scholarly and practical insights can be used to inform your own entrepreneurial practices.

Examination

Your evaluation will be based on your participation, a facilitation, an individual idea pitch, a group pitch and a final research paper.

SSC3018   Statistics II

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisites
SSC2061 Statistics I.

Objectives
- To familiarize students with quantitative research methods, building on SSC2061 Statistics I .
- To develop the abilities to read, understand and criticize articles in the domain of your concentration, as a passive use of your knowledge of quantitative techniques.
- To gain experience in actively performing a quantitative analysis yourself, making use of the (more advanced features of the) tool SPSS.

Description of the course
In Statistics II, we resume the thread of Statistics I: a discussion of the basic tools of inferential statistics: confidence intervals and hypothesis tests (which in turn involved concepts like null and alternative hypotheses, Type I and Type II errors, rejection points and p-values), all these concepts illustrated in the context of the one-sample tests. In this course you will encounter a whole battery of additional tests, enabling you to examine a large array of questions that may come up in social sciences and life sciences, and that focus on cases you will encounter most frequently: multivariate cases, rather than univariate cases.

In the first weeks, we discuss amongst others the two-sample t-test (allowing you to compare the mean of a quantitative variable between two populations), ANOVA (same, for more than two populations), the paired-sample t-test and the chi-square test (allowing you to establish relationships between qualitative variables, using contingency tables). But the main dish of the course is obviously regression analysis, a very flexible technique which allows you to relate a dependent variable to a number of independent or explanatory variables.

There will be a strong focus on actively doing statistics. Using the great 'How is Life?' data set of OECD, that compares the quality of life in many countries, you will do weekly empirical investigations, using SPSS as your modelling tool. And at the finish of the course, you will do another, more major and less structured empirical analysis in SPSS: your student project. The project measures your active mastery of statistical data analysis. In the final exam, your passive mastery will be assessed. The exam will consist of pieces of statistical analyses, with the student having to interpret and criticise the outcomes of these analyses. Weekly assignments, as well as the project and exam, focus on your ability to apply statistics in relevant areas, beyond 'knowing statistics'.

Literature
- De Veaux, R.D., Velleman, P.F., & Bock, D.E. (2012). *Stats: Data and Models, International Edition, 3/E.* Addison-Wesley. 0-321-75372-0 (tentatively).

Instructional format
Besides the lecture, there are two weekly group meetings, of different kind. One group meeting will take place in the computer room, and is dedicated to solving the weekly empirical assignments in SPSS. The other group session is a standard tutorial group session, filled with problems and discussion tasks.

Examination
Final exam, six weekly empirical assignments, and the final essay for the student project.

SSC3019   Human Reasoning and Complex Cognition

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences & Sciences	No

Prerequisites

SSC1005 Introduction to Psychology or SCI2036 Artificial Intelligence and at least two 2000-level courses.

Recommended

SSC2062 Foundations of Cogitive Psychology.

Objectives

- To help students acquire knowledge of recent (psychological) theories in the field of reasoning, decision making, problem solving, and (moral) judgement.
- To provide an insight into the role of higher cognitive processes have in directing human behaviour; various forms of human reasoning, decision making, problem solving, creativity, etc.
- To explore a given topic in the psychology of thought by writing a client consultancy report (group work).

Description of the course

The present course is concerned with theoretical (psychological) and empirical perspectives on human reasoning and complex cognition. Reasoning involves making deductive or inductive inferences and judging them according to current goals, beliefs and knowledge. Decision making refers to choosing between alternatives (e.g. different mental models). Furthermore, several theoretical and empirical findings on problem solving and judgment are discussed. These topics are of central importance to humans and even though some seem to reason better than others or their decisions seem more sound, thinking remains an important and for some uniquely human feature. Studying human thought belongs to the field of Cognitive Psychology. Like most topics studied by psychologists, higher cognition includes a wide range of explanatory models that emphasize different aspects of human thought.

Eleven topics of the (cognitive) psychology of complex cognition are discussed using a Problem Based Learning format. The topics include: (hypothetical) reasoning, , the psychology of decision making, emotions and complex cognition, deductive and inductive reasoning (heuristics and biases), (creative) problem solving, moral judgement, and socio-economical decision making (pro-social behavior: risk and trust).

Literature

- Chapters of several basic cognitive psychology books are made available as e-reader or hardcopy.
- E-reader.

Instructional format

Tutorial group meetings and lectures.

Examination

Assesment is based on an exam, and a client concultancy report (group grade).

SSC3023   *Philosophy of Mind*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences & Humanities	No

Prerequisites
SSC1005 Introduction to Psychology or HUM1007 Introduction to Philosophy and at least one 2000-level course from Humanities, Social Sciences or Sciences.

Recommended
COR1002 Philosophy of Science.

Objective
- To acquaint students with current ideas, philosophical arguments and empirical evidence on the nature of mind and the relationship between mind and body. We focus on modern cognitive and neuropsychological theories in the area of consciousness. Philosophical reflection on the caveats and problems associated with the notion of consciousness will be stimulated.

Description of the course
The mind-body problem is a legacy from the scientific revolution, which started in the 16th century and reached its culmination point with Newtonian physics. Starting with Galileo's and Descartes' formulation of this problem we will discuss different philosophical positions in a more in-depth fashion. In the behavioral- and neurosciences these problems transform into questions about consciousness, conscious experience, and conscious perception. Those topics disappeared from science with the rise of behaviorism in the early twentieth century. But now they are back in the behavioral- and neurosciences again. Only over the past few decades consciousness has reappeared in cognitive science and neuropsychology.

We will start this course with some philosophy, then we will scrutinize modern day sciences, especially cognitive science and neuroscience for ideas on mind and consciousness. At the end of the course we will go back to philosophy and we will ask ourselves whether all this empirical knowledge from psychology and neuroscience has brought us further in unraveling the brain-consciousness- (or mind-body) problem.

Suggested Literature
- Kim, Jaegwon: Philosophy of Mind, 2011
- Dehaene, Stanislas: Consciousness and the Brain, New York, 2014
- Massimini, Marcello & Tononi, Giulio: Sizing Up Consciousness, Oxford, 2018

Literature
- E-reader.
- Introduction Course Manual

Instructional format
Tutorial group meetings and lectures.

Examination
Assesment is based on an exam and a paper.

SSC3030   The Law of the European Institutions

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	No

Prerequisites
SSC1007 Introduction to Law and Legal Reasoning and at least one of the following courses: SSC2060 Comparative Constitutional Law (SSC2012 Comparative Government) or SSC2024 International Law.

Objectives
At the end of the course, students should have acquired adequate knowledge, practical skills and a critical understanding with respect to the following:
* The role and significance of law in the European integration process.
* The legal foundations of the European Union (EU) (as set out in the Treaties).
* The institutions of the EU, their historical evolution and the horizontal relationship between them (as reflected in decision-making procedures).
* The vertical relationship between the EU and the Member States (including the principles of supremacy, legality, subsidiarity, proportionality and loyalty).
* The implementation and enforcement mechanisms of EU law (infringement proceedings, enforcement through national courts, review of EU action).
* The position of the individual as a holder of fundamental rights and a citizen of the Union.

In addition, throughout the course the students should have become familiar with legal thinking and legal reasoning, and should in particular be able to:
* Find legal instruments in paper or electronic format.
* Keep abreast of legal developments.
* Read a legal document and extract the relevant information from it.
* Construct a legal argument on a basic issue of EU law.
* Use EU law to give an opinion on a legal problem.

Description of the course
This course focuses on the institutions of the European Union. At the same time, this course provides an opportunity for students to be exposed to legal thinking. Law is central to the process of European integration, and it plays a greater role in European affairs than it does at national or international level. It is accordingly essential for students to become familiar with the ways of legal thought and legal reasoning, if they want to understand fully the European integration process, and European matters more generally.

Literature
* A copy of the EU Treaty and of the Treaty on the Functioning of the EU. These can be downloaded from http://eur-lex.europa.eu/collection/eu-law/treaties.html or they can be found in Foster (ed.), Blackstone's EU Treaties and Legislation (last edition).

Instructional format
Tutorial group meetings and lectures.

Examination
Written assignments and a final written exam of case studies and essay questions. One of the written assignments will count as one exam question.

SSC3032   *Atrocity Triangle: A course on the Criminology of Gross Human Rights Violations*

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisites
Two 2000-level courses in the Social Sciences or Humanities.

Objectives
- To gain a criminological understanding of gross human rights violations and other international crimes by examining their causes on individual (micro), institutional (meso), national and international (macro) levels using a criminological approach that integrates relevant insights from different disciplines (social psychology, sociology, victimology, history, international relations, international law and psychology).
- Moreover, to view the world through the eyes of the perpetrators as well as the victims and the bystanders by focusing on their roles in the occurrence of gross human rights violations.
- To make insightful the linkage between gross human rights violations and violent conflicts in the world.
- To gain an understanding of how to approach the criminological study of complex cases of violence and to be able to analyze such cases independently.

Description of the course
      The first part of the course introduces the leading concepts and theoretical frameworks that will structure the course. The course therefore firstly addresses the concept of the 'atrocity triangle' and it looks into the relationship between the three actors (the perpetrator, the victim, and the bystander) involved in the triangle. Subsequently, an integrated criminological model will be introduced which sets out the relevant etiological elements that will be addressed in greater detail in the second part of the course.

      The second part of the course, which focuses on the perpetrators, will start with the forms, functions and effects of (political) violence and the concept of torture in particular. The analysis continues on the macro level and addresses the role of policy and ideology. Subsequent analysis focusses on the meso level and the role of military organizations and other institutions is discussed. In this context attention is paid to the influence of military training and we will discuss how with the help of a bureaucratic system genocide can be planned, organized and carried out. The discussion will thus address several compulsive and determinative features of the environment surrounding perpetrators of gross human rights violations. We will furthermore discuss several experiments (Milgram, Ash, Stanford, etc.) on obedience, institutional roles and conformity, but we will also address other social-psychological mechanisms which are helpful in understanding how and why people are able to participate in the perpetration of gross human rights violations. Lastly, the important role that language and discourse plays in conflict and international crime is highlighted.

      The third part of the course will focus on the bystander. We will start the discussion on the role of the bystander by looking into the phenomenon of the 'the bystander effect' in order to address the question why bystanders fail to act. Secondly, the role of bystanders in international politics at the macro-level of both states and international organizations in the field of human rights will be discussed. We will give special attention to the role of the UN Security Council when it was confronted with gross human rights violations. Lastly, in addition to perpetrators and bystanders (collaborators), certain actors in the same situations did not perpetrate or passively stood by, instead they took affirmative action and came to the help of those in need. We will therefore look more closely into the phenomenon of rescuing in order to find out what turns actors into rescuers.

      The fourth and last part of the course will take a more victimological perspective, which focuses on the position of the victim. Who are the victims and why are they victimized? What is the relationship between these victims and their perpetrators and what are the consequences of this relationship? In this context specific attention will be paid to gender selective violence. More particularly, the phenomena of rape as a 'weapon of war' and gendercide (gender selective mass killings) will be discussed. Also, the complex case of child soldiers will be addressed as they are victims and perpetrators at the same time.

      Several lectures will be held during this course. These lectures will be used to illustrate the discussed materials and to provide the participants with a deeper understanding of the subject matter by presenting the linkage between theory and (research) practice. During the lectures, various guest speakers will address the subject matter from the practitioner's perspective. In addition, we will screen a number of documentaries that will be analyzed during the post-discussion. We hope that, through these documentaries, the subject matter of this course will become more accessible and less abstract.

      Case studies play an important role throughout the course and we will therefore pay attention to a wide variety of cases including The Holocaust and other cases of genocide (Armenia, Australia, Cambodia, Rwanda, Srebrenica, Darfur, etc.). Although cases of genocide will play an important role in this course, the

caseload is certainly not limited to genocide and other violent conflicts will be addressed as well. Here one could think of the following cases, Chili, Argentina, Guatemala, Indonesia, East Timor, Iraq, Syria, Congo, Central African Republic, etc. Not to forget the torture practices of the U.S.

The insights gathered throughout this course have policy implications and inform us how we could react to gross human rights violations once they have occurred. These policy implications are addressed in greater detail during another UCM course titled The aftermath of atrocity: A course on transitional justice and post-conflict reconstruction (SSC 3052) which will be taught during the spring semester in period 5.

Literature
- Handbook (t.b.a)
- E-reader.

Instructional format
Tutorial group meetings, compulsory lectures and screening of documentaries.

Examination
A midterm- and final take-home exam both consisting of a paper. The themes and topics of the papers will be announced in due course.

SSC3033   *Economic Psychology*

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisites
SSC2061 Statistics I and SSC1027 Principles of Economics.

Recommended
SSC2048 Intermediate Microeconomics.

Objective
- To familiarize students with basic concepts, theories and insights of the economic psychology of judgment and decision-making.

Description of the course
Increasingly, economists are discovering psychology as a means to enrich their models of economic behaviour and well-being. The importance of this is illustrated by the fact that the Nobel prize winner in economics in 2002 was the distinguished psychologist Daniel Kahneman. He characterizes his research as a quest for the 'logic of the irrational'. Adam Smith already recognized that economic behaviour, just like other behaviour, is motivated by an intriguing blend of 'rational' considerations and 'irrational' sentiments. The great challenge is to investigate the implications of the latter motives for economics.

This course aims at giving an intensive introduction into this field. The first part of the course provides an overview of the psychology of judgment and decision making. Basic principles of rational decision-making are compared with actual behaviour.The second part of the course deals with applications of how psychological mechanisms influence economic decision-making in the field and their relevance for law and public policy. Students should realize that this course is not easy and that its material also includes some mathematical derivations.

Literature
- Hastie, Reid, and Robyn M. Dawes. *Rational choice in an uncertain world: The psychology of judgment and decision making*. Sage, 2010.
- Articles and chapters from books.

Instructional format
Tutorial group meetings with presentations by students and two survey lectures.

Examination
The final grade will be based on a final written exam with open-ended questions, presentation(s) and participation. Each student gives one or two presentations on one/two of the subjects.

SSC3034   *International Economic Relations: the Case of Europe*

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Science	No

Prerequisite
SSC1027 Principles of Economics, SSC2007 Intermediate Macroeconomics.

Recommended
SSC2048 Intermediate Microeconomics.

Objective
- To be able to understand and analyze the institutional design of EU and EA and its role in cross country economic relations.
- To understand theories of economic and financial integration and apply these to understand cross-country dynamics within the EU/EA and between the EU/EA and the rest of the world.
- To understand and use the role and impact of macroeconomic policies on economic and financial integration.

Description of the course
In this course we investigate international economic relations, with a particular focus on the European Union (EU) and the euro area (EA). We discuss channels through which nations are economically connected. This involves analyzing the dynamics of international markets for products and services, labor and finance and the importance of the underlying institutional designs. We study the underlying economic theory and the way such insights have been translated into the institutional arrangements of the European Union. We discuss how effects of macroeconomic policies are transmitted from country to country through these channels and how fiscal and monetary policies can/should be coordinated to contribute to fostering economic integration. We pay attention both to the intra-European dynamics and the relation of Europe with the rest of the world.

Literature
- Tbd; most likely a basic text like "Economics of Monetary Union (Paul de Grauwe) plus selected articles

Instructional format
Tutorial group meetings and lectures.

Examination
Written exam and team project.

SSC3036   American Foreign Policy

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	Yes

Prerequisites
SSC1006/SSC2002 International Relations: Themes and Theories or SSC1025 Introduction to Political Science, and at least one more 2000-level Social Sciences course.

Objective
- To understand the history, the political process in which policy is made and the policy content of American foreign policy.

Description of the course
Everyone appears to have an opinion on American foreign policy, however, often such opinions are based on emotion or rhetoric. This course does not want students to be less critical of the United States, rather it strives to inform and educate students on the history, process and sources of American foreign policy, so that opinions are based on a sound footing.

The course is divided into four sections. The first section will focus on the field of foreign policy analysis as a subfield in International Relations. An overview of the various analytical perspectives on U.S. foreign policy will be covered. This first section will also consider the importance of examining American foreign policy in today's world.

Section two will concentrate on the history of U.S. foreign policy, covering such events as the Founding of United States, World War I, the interwar years, World War II, the making of a Superpower, the Cold War, the Post-Cold War world, September 11th and ending with recent world events, such as the Iraq War, the Global War on Terror and the Donald J. Trump presidency.

Part three will examine the politics and the policy-making process of American foreign policy. Topics for discussion in this section will include the institutions involved in the policy making process, such as the President, various bureaucracies like the State Department, the Department of Defense and the CIA, plus Congress and the Courts. This section will also consider the role the American public plays in the process of making U.S. foreign policy. The final part of this course will study the instruments used to implement American Foreign Policy. This section will include a discussion of America's use of open or diplomatic instruments, secret instruments, economic instruments and also its military instruments. This final section will end with a task that discusses the future of American Foreign Policy.

Literature
- Hastedt, Glenn P. (2020). *American Foreign Policy: Past, Present and Future*. 12th edition. Rowman & Littlefield.
- Kaufman, Joyce P. (2017). A Concise History of U.S. Foreign Policy. 4th edition, Rowman & Littlefield.
- E-readers.

Instructional format
Tutorial group meetings and lectures.

Examination
A final exam (consisting of multiple choice questions, true and false questions and essay questions), a constructive learning assignment (creating your own exam questions)* and a research paper. *If covid-19 is still not allowing in-class exams, the exam will be take-home essay exam.

SSC3038   Contemporary Sociological Theory

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisites
One of the following courses: SSC1003/SSC2065 Theories of Social Order, SSC2028 Classical Sociology, SSC2059 Social Movements, HUM2031 Cultural Studies II, HUM2014 Philosophers of the 20th Century.

Recommended
SSC2028 Classical Sociology or HUM2014 Philosophers for the 20th Century. This course is not recommended for first year students.

Objectives
- To familiarize students with theories in 20th century sociology and give students the necessary skills to analyze, apply, compare and criticize those theories.
- To discuss what a theory is, how we can theorize, and how theories can illuminate real social problems or issues.

Description of the course
"Many people, ordinary ones and scientists alike, hate theory. Yet they could not live without it. When all is said and done, theory is the more or less disciplined talk by which people make what sense they can of their social worlds" (Charles Lemert in The Blackwell Companion To Major Classical Social Theorists, 2003, p. 267). This course is part two of a sequence that traces the historical development of sociological theory (the first part being Classical Sociology). Whereas in Classical Sociology students focus on sociological theory up until the 1930s, in this course we will be dealing mainly (but not exclusively) with social theory that has emerged from the 1960s onward. During this time, the historical context started to change in important ways. It brought about an inclusion of new voices from the Global South, the beginnings of the greatest phase of the women's movement, and a variety of other social movements from environment to gay rights. The 1960s pushed sociological theorists to focus more on processes of social change, social inequality and processes of marginalization and exploitation that shape change, on power relations and social movements that contest them, and on cultural and other differences among individuals and groups.

In this course, you will be introduced to several major theoretical bodies of thought in modern sociology, such as the Frankfurt School, Symbolic Interactionism, Post-structuralism, Feminism (e.g. Standpoint Theory, Ecofeminism) and Post-colonial Theory. We will discuss these traditions mostly on the basis of original works by eminent social theorists like Herbert Marcuse, Nancy Chodorow, Frantz Fanon and Michel Foucault. Reading original works can be, of course, a very difficult and challenging, but also elating task. Reading original theoretical material is important since students thus have the opportunity to form their own opinions about theorists' ideas. Some of the questions we will be dealing with in the course include: How can we make sense of the social world? How does capitalism impact our social reality? How is social reality constructed? What causes social change? What is the link between agency and structure? How is knowledge produced, and by whom? An important component of the course is applying the different theoretical approaches to varied social phenomena in order to explore the world around us through the lens of these theories?

Literature
- Calhoun, C., et al. (2002/2015). Contemporary Sociological Theory. Malden: Blackwell Publishing.
- Excerpts from books and articles from academic journals.

Instructional format
Tutorial group meetings and lectures.

Examination
A take-home exam with two essay questions; a presentation of an application of theory to a case; your performance as a discussion leader.

SSC3040   *Identities*

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences & Humanities	No

This course is not recommended for first year students

Prerequisites
At least two of the following courses: SSC1029 Sociological Perspectives, SSC2028 Classical Sociology, HUM1003 Cultural Studies I, SSC2059 Social Movements, HUM2031 Cultural Studies II, HUM2018 Cultural Diversity in a Globalizing World, HUM2003 The Making of Crucial Differences, HUM2014 Philosophers of the 20th Century, HUM2056 Cultural Remembrances.

Objectives
- To learn how different categories of social identities operate as categories of socio-structural inequality.
- To discuss perspectives on race, ethnicity, class, gender and national identities in order to get a better understanding of what they are and how they are conceptualized theoretically.
- To learn about and reflect on how you yourself, your thinking and your way of being is affected by these relations of oppression and domination in everyday life.

Description of the course
Identity is about one's sense of self, it is about personhood, and it is about what kind of person one is. Identities always involve both sameness and difference. Thus, if you are Dutch, you are like other Dutch people and different from the non-Dutch. There is a tendency to see identities as being fixed or given. Sociologists, however, argue that identities are fluid and changeable and that we can acquire new ones.

In this course we will explore theoretical texts on the historical, cultural and political construction of social identities. We will focus on class, gender, race, ethnicity and nationality as historically specific, structured relations of oppression and exploitation examining their existence and interaction. Discussions and analyses will be based on how social identities work as overlapping categories of both inclusion and exclusion and how they are used to divide, rank, and discriminate.

Some of the questions to be addressed are: What are the main levels of analysis within which we can explore the interplay between these exploitative and oppressive relations? What are their theoretical, cultural, ideological and political implications?

The course is designed for students who have a serious interest in the topic and who are open to critically evaluate and understand their own participation within structures of domination and oppression. We will examine and interrogate how heterosexuality, whiteness and class privilege, for instance, function in such a way as to keep systems of oppression intact and discuss how to participate in the struggles against identity-based forms of domination.

Literature
- Alcoff, L.M., & Medieta, E. (2003). *Identities: Race, Class, Gender, and Nationality.*

Instructional format
Group discussions, lectures and films.

Examination
One take-home exam including one or two essay questions and one self-reflective essay. Your performance as a discussion leader will comprise ten percent of your final grade.

SSC3041   *Economics and Society in Contemporary Asia*

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisite

SSC1027 Principles of Economics.

Recommended

SSC2007 Intermediate Macroeconomics (SSC2038 International Macroeconomics.)
SSC2043 Development Economics

Objective

The goal of this course is to understand economic issues and economic developments in contemporary Asian societies in their social, cultural and political context.

Description of the course

This course focusses on the intersection of economics, politics and culture in Asia societies. The course transcends the borders of academic disciplines and includes topics such as long-run economic development, intra-regional cooperation, social change, political and economic institutions, and the changing global role of Asian countries. We pay attention to topical issues such as the trade and the financial relations between China and the rest of the world.

Literature

Collection of articles and book chapters.

Instructional format

Tutorial group meetings and lectures.

Examination

Paper and presentation, Written exam and open questions.

SSC3047   Urbanisation, Development and Poverty

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences & Humanities	No

Prerequisite
SSC2046 Globalization and Inequality or SCI1016 Sustainable Development.

Objectives
After completion of this course students have acquired knowledge about impacts of urbanisation on development and poverty in an increasingly globalized world. In particular, they will learn about:
- Multifaceted impacts of global urbanisation, including economic, ecological and social challenges and opportunities of increasingly populated cities
- Impoverished conditions of many city dwellers of the Global South, as experienced through access to infrastructures, mobilities, public space, and diversity
- Development impacts and potentials created by interconnectedness between 'global cities'.

Description of the course
Since 2008, according to the United Nations Population Division, more than half of the world population lives in urban areas. Over a billion of these city dwellers live in informal settlements (slums), where poverty and precarity are highly concentrated. Nevertheless, people continue to migrate to cities, and primarily to informal settlements. Despite their vulnerability to disaster, disease, violence and cultural tensions, they also appear to be focal points of vitality, opportunity and new initiatives. In many ways 'the city' can be conceptualized as a contested site, a compact 'laboratory' where many of the tensions and opportunities related to globalization and development are acted out.

Through lectures from ongoing research and selected readings, this course delves into the human aspects of these sites that embody contrasts and contradictions of social, economic and political processes in cities of the Global South. We discuss connections and tensions between urban communities and economic development; the creation of vulnerable populations through urbanisation and the precariousness of labor; the structural failures of slum ecologies and how they affect people; but also how citizens nevertheless find ways of making the city their home. In short, we aspire to infuse you with both how development and poverty of urban contexts are structurally reproduced in highly political ways, and how 'cityness' also always depends on people who manage to flexibly and inventively arrange their lives on a daily basis.

Literature
- Simone, A. M. (2010). *City life from Jakarta to Dakar: Movements at the crossroads*. New York: Routledge.
- Relevant academic articles, reports, book chapters and websites.

Instructional format
Tutorial group meetings, group work and lectures.

Examination
Composition of a City File & presentation (group); take-home exam (individual).

SSC3049   Human Rights: Principles and Polemics

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	Social Sciences	No

Prerequisite
SSC2024 International Law or SSC1007 Introduction to Law and Legal Reasoning.

Objective
- Provides students with an advanced introduction into human rights.
- Introduces key concepts that are used within all forms of human rights discourse.
- Familiarizes students with polemics in the field of human rights
- Provides students and opportunity to engage with the intricacies of legal reasoning.
- To encourage critical thinking and appreciation of differences within the field of human rights.

Description of the course
There is the expectation that in an increasingly multicultural and post-secular world, human rights provide us with some common ground: however turbulent and changeable social life may be, we can all demand and enjoy the protection of human rights. This expectation might turn out to be misguided. Even within the "West", there is intractable disagreement as to the content and implications of human rights. Activities that are seen as human rights violations by some legal systems are tolerated by others. Even more, activities that are seen to be human rights violations by some legal systems are seen to be rightful exercises of freedom by others. How deep are these disagreements? Can they be overcome?

This course will provide students an advanced introduction to the field of human rights. It covers two aspects. First, it covers the "dogmatic core" of human rights law, which includes topics such as the sources of the status of human rights law in international law, who benefits from human rights (individual human beings exclusively, or also corporations or collectives?), what happens when human rights conflict? Naturally, my freedom stops when your freedom start, but how do we draw the line between different claims to freedom? What happens when human rights clash with the public interest? Can human rights be abused?

The second part of the course explores polemics in the field of human rights. These include the legality of the the limits of free speech, the proliferation of rights, the scope of the prohibition on discrimination and the meaning of human dignity. This part of the course will be based on the exploration of contrasting judicial decisions extracted a variety of international and domestic courts. This part of the course aims to show that it may be premature to speak of "a human rights community". Human rights mean different things for different people, and even the appointed experts are often unable to reach agreement.

This course is predominantly legal in character. That means that social scientific explanation and understanding will not be the focus of the course. Rather, the course will concentrate on analyzing the justification of legal decisions in accordance with legal rules and principles.

Literature
- E-Reader

Instructional format
Tutorial group meetings and lectures.

Examination
TBA.

SSC3051   Contemporary Critical Security Studies

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
SSC1006/SSC2002 International Relations: Themes and Theories.

Objectives
- To understand 'security' in International Relations (IR) as a complex concept with changing meanings and applications.
- To discuss the consequences of different meanings for security critically.
- To deconstruct the given notions and policies about security and ask questions like what is included, excluded, legitimized and justified in them.
- To illuminate the main theoretical assumptions of the several approaches of security studies in IR by placing the main focus on the more contemporary and critical ones.
- To explore the ways how contemporary or critical security studies challenge traditional security studies.
- To discuss in what ways contemporary security approaches compare and contrast with each other.
- To emphasize the empirical application and practical use of such approaches by discussing each approach with a relevant case study.

Description of the course
Security Studies during the Cold War was a rather limited and narrow sub-field of International Relations mainly focusing on state security and defining threat only in military terms. By the end of the Cold War period, new schools of thought have emerged in the field of Security Studies in parallel with the emergence of new kinds of threats against human well-being and security. Today, Contemporary Critical Security Studies represents a large group of scholars, schools, approaches and understandings.

This course deals with a number of these schools and approaches. It starts with an introduction to the conventional security (Realism and Liberalism) and explains why these approaches are found unsatisfactory by the academic community at the beginning of the 1990s. Then it explains various theoretical positions from constructivism to Feminism (gender security), Green Theory (environmental security) and Post-Colonialism (security from non-Western perspectives). Then it introduces contemporary concepts like 'Securitisation' which is developed by the Copenhagen School and discusses 'security networks' or 'security apparatus' investigated by the Paris or Sociological school. Another relevant contemporary approach is called 'Human Security,' and the course explains the development of this concept. In general, the course aims at giving an idea to the students of International Relations how Critical Security Studies has developed as a separate sub-field of International Relations, which was the biggest contribution of the Wales or Aberystwyth Schools.

The course also discusses several contemporary issues to give a broader understanding to the students about the application of theories and approaches (such as poverty, migration, borders, cyberwar, new technologies and warfare, responsibility to protect, humanitarian intervention, war against terror, and other contemporary security issues).

Literature
- Columba Peoples and Nick Vaughan-Williams (last edition*), Critical Security Studies: An Introduction*, Routledge.
- Selected articles, reports and other educational material.

Instructional format
Tutorial group meetings and lectures. Attendance is compulsory.

Examination
During the course, students can choose what kind of midterm assignment they will do after they discuss it with the tutor. These assignments can range from presentation(s) to midtermpaper(s), from writing journals to making book/movie reviews. Each assignment will be analytical and will reflect the application of the relevant literature. Different deadlines will be applied to different assignments. In the final examination students will write an extensive and analytical final paper (on a topic students choose and approved by the tutor). Class pariticipation will also be taken into account in the assessment.

SSC3052   The Aftermath of Atrocity: A Course on Transitional Justice and Post-conflict Reconstruction

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisites

Two 2000-level courses in the Social Sciences or Humanities.

Objectives

- An understanding of transitional justice and how to deal with grave historical injustices from the past. Although the course addresses the roles of many different actors, the role of the victim will receive more substantial attention.
- To examine different approaches to post-conflict justice (retributive, restorative and transformative approaches) and their policy implications.
- To provide for a critical overview of different instruments for transitional justice, such as, apologies and forgiveness, memorialization and commemoration, truth telling and truth commissions, impunity, pardons and amnesties, compensation, restoration, restitution of property (especially looted and stolen art), international and regional criminal courts and tribunals, lustration and vetting, etc. and to examine their impact and effectiveness.
- An understanding of issues in post-conflict reconstruction which focuses on the challenges (military, political, and social) that post-conflict societies are facing and how they impact on the consolidation of peace and stability.

Description of the course

The course will first introduce and define the field of transitional justice. We will look into its historical evolution and address the rationales underlying it. The introduction furthermore includes an overview of the main mechanisms/components that can be part of the process of transitional justice and how they are interrelated.

The course will subsequently address several of these transitional justice mechanisms and in this analysis we will predominantly focus on the perspectives of the victims. Victims (and survivors) are not only a group, but also individual human beings and their wishes and interests in the aftermath of large scale conflict can be very diverse and even contradict the wishes of other victims or the group as such. What are their interests and what are their views on transitional justice including possibilities of remedy and reparation? In this context specific attention is given to the impact of violent conflict on women and children.

Throughout the course critical attention is paid to the following justice mechanisms: apologies and forgiveness, memorialization and commemoration, truth telling and truth commissions, pardons and amnesties, compensation, restoration, restitution, international and regional criminal courts and tribunals, lustration and vetting. The analysis will be concluded with a discussion of the various justice mechanisms and their potential to contribute to (or jeopardize) sustainable peace. How effective are these approaches in breaking cycles of violence? Can they bring reconciliation?

In addition to issues such as justice and reconciliation, other matters are also significant in post-conflict societies as they greatly affect the consolidation of peace and stability. Justice and reconciliation only form one pillar of reconstruction, but also in other areas constructive action is required. Such other areas of concern include, for instance, security, wellbeing, and governance. The course therefore looks into the process of reconstruction and discusses which actions are required in order to move from the precarious early stages of post conflict transition to a more sustainable situation which allows for the consolidation of peace and stability.

Several lectures will be held during this course. These lectures will be used to illustrate the discussed materials and to provide the participants with a deeper understanding of the subject matter by presenting the linkage between theory and (research) practice. During the lectures, various guest speakers will address the subject matter from the practitioner's perspective. In addition, we will screen a number of documentaries that will be analyzed during the post-discussion. We hope that, through these documentaries, the subject matter of this course will become more accessible and less abstract.

Case studies play an important role throughout the course and we will therefore pay attention to a wide variety of cases including The Holocaust and other cases of genocide (Armenia, Australia, Cambodia, Rwanda, Srebrenica, Darfur, etc.). Although cases of genocide will play an important role in this course, the caseload is certainly not limited to genocide and other violent conflicts will be addressed as well. Here one could think of the following cases, Chili, Argentina, Guatemala, Indonesia, East Timor, Iraq, Syria, Congo, Central African Republic, etc. Not to forget the torture practices of the U.S.

Literature
- Handbook (t.b.a)
- E-Reader.

Instructional format
Tutorial group meetings, compulsory lectures and screening of documentaries.

Examination
A midterm- and final take-home exam both consisting of a paper. The themes and topics of the papers will be announced in due course.

SSC3054   *International Trade Law: Globalization, Trade and Development*

Semester	Period	ECTS	Concentration	Device Free
Fall	1	5	Social Sciences	No

Prerequisites
SSC2024 International Law or SSC2060 Comparative Constitutional Law

Objective
- To gain a better understanding of the World Trade Organization and its basic legal framework.

Description of the course

The recent revival of economic nationalism in various parts of the world, including in some of the traditional pillars of trade liberalization such as the United States and United Kingdom, reflect the growing fear, mistrust and hostility of many people in these countries and around the world regarding economic globalisation and international trade. While economic globalisation in general, and international trade in particular, undoubtedly offer the possibility of unprecedented prosperity for people in both developed and developing countries, they also cause numerous problems and give rise to justified concerns. The challenge facing the international community is to manage and regulate the economic globalisation and international trade so that they benefit all of humankind.

The World Trade Organization, established in 1995, is at the forefront of the multilateral effort to manage and regulate economic globalisation in general and international trade in particular. The law of the WTO governs the trade relations between the WTO's 164 Members but also concerns each of us directly, as it affects the price and quality of the goods and services we consume. Moreover, for many of us, our (future) job will be, directly or indirectly, related to (and sometimes threatened by) international trade.

Since 2001, WTO Members have been negotiating in the context of the WTO Doha Development Round on rules for the further liberalisation of international trade. To the disappointment of many, years of negotiations so far have resulted in only limited agreements on new rules for international trade. However, the current WTO rules have played an important role in mitigating the consequences of the 2008-9 Global Financial and Economic Crisis. In the face of the dramatic drop in production and exports as well as high unemployment experienced by many countries during the 2008-9 crisis, it was feared that countries would resort to trade protectionist measures to support their domestic industries. During the Great Depression of the 1930s, the adoption of such protectionist measures deepened and lengthened the economic crisis considerably, which in turn led to political upheaval and radicalization, international tension and, eventually, war. It has been argued that the WTO and its rules have contributed much to the fact that countries did not - in a more significant manner - resort to disruptive protectionism in response to the Global Financial and Economic Crisis and that history did not repeat itself. However, continued vigilance is called for because high levels of unemployment and inequality persist in many countries leading to pressure on governments by domestic industries calling for protection from foreign competition, with the trade war between the US and China being the most prominent example of such developments. Moreover, present-day protectionist measures do not only take the form of high tariffs or small quotas (both easy to detect) but instead hide in domestic regulation or domestic policy measures.

This introductory course on WTO law and policy is recommended to all students who want to gain a better understanding of the core institutional and substantive rules of the international trading system. This understanding will enable students to also appreciate some other recent developments in the field of international economic law, such as the proliferation of preferential trade agreements and the ongoing trade tensions between major trading powers in the world. Both are a response to the failure of the Doha Development Round to reach multilateral consensus, thereby shifting trade negotiations and actions partly away from the WTO. Depending on the political and economic position of the involved states, some of these agreements and actions may well set new standards for future international trade regulation. By taking this course, students will gain understanding of not just the WTO but also of other recent developments in international economic relations.

The course is built around a number of true-to-life international trade problems represented in the form of case studies. The course addresses six themes. It starts by examining the phenomenon of economic globalization and, the arguments for and against free trade, as well as the role of law in international economic and trade relations. Secondly, the course looks at the history, objectives, structure, functions, decision-making and membership of the WTO. Thirdly, the WTO's unique system for the resolution of trade disputes is discussed. Fourthly, the principles of non-discrimination in WTO law (namely the obligations of most-favoured-nation treatment and national treatment) are examined. Fifthly, the WTO rules on market access, dealing with tariff barriers and some non-tariff barriers to trade in goods and services are addressed. Finally, the provisions of WTO law that aim to balance trade liberalization with other societal values (such as health, environment and security) by means of exceptions to WTO obligations are discussed.

Literature
- Van den Bossche, P. and Prévost, *Essestionals of WTO Law*, Second edition (Cambridge University Press, 2021).
- Additional mandatory literature may be provided for some topics via Canvas.

- Additional recommended literature: Van den Bossche, P. and Zdouc, W., *The Law and Policy of the World Trade Organization: Text, Cases and Materials*, Fourth edition (Cambridge University Press, 2017), selected chapters and/or sections only. Moreover, references to up-to-date news items are offered for each theme on Canvas.
- WTO legal texts that can be found on the WTO website.

Instructional format

The course consists of two mandatory tutorial meetings per week and possibly a number of lectures or Q&A sessions. The lectures deal with selected topics covered by the course and are either conducted by a visiting lecturer or offered in the form of recorded lectures. Alternatively, Q&A sessions with the course coordinator may be offered. The tutorial meetings, held in principle twice a week, are dedicated to detailed discussion of case studies that address problems covered by the relevant theme and are prepared by students beforehand in writing. They are in principle conducted by the course coordinator.

Examination

Written assignments submitted during the course and a final written exam. In case of a low course enrollment, an oral exam may be held instead of a written exam.

SSC3055 *Chinese International Relations and Foreign Policy*

Semester	Period	ECTS	Concentration	Device Free
Spring	4	5	Social Sciences	No

Prerequisite
COR1003 Contemporary World History AND SSC2002 International Relations: Themes and Theories OR SSC1025 Introduction to Political Science

Course Description
The economic and political reforms of the 1980s and 1990s transformed China into the world's second-largest economy in less than a generation. Its economic growth has allowed the country to seek a more significant role in shaping world politics. In this advanced-level undergraduate course, we are trying to make sense of Chinese international relations and foreign policy—how China approaches the world and what shapes its external behaviors—in the contemporary era.

This course begins with an introduction, laying out the overall course structure, introducing critical theoretical perspectives and approaches to the Western and Chinese international relations theories. Week 2 examines the historical overviews of Chinese foreign policy as well as the leading domestic debates on it and examines the domestic and international determinants for a changing Chinese foreign policy from 1949 onwards. From Week 3 to 6, some of the core foreign policy interests for China (i.e., national reunification, security, sovereignty and territorial integrity, performative legitimacy, and international recognition and status) are examined with corresponding country/region case studies. Week 3 and 4 examine China's relationship with its nearest neighbors (i.e., Taiwan and the Korean Peninsula) and significant countries in Northeast and Southeast Asia, illustrating the critical challenges to Chinese national interests that occur on its border. Week 5 looks into Chinese relations with the U.S, exploring the development of the Sino-U.S relations, U.S military presence in Asia, the Obama administration's pivot to Asia, and also the recent Sino-U.S trade war. Week 6 takes a closer look at Chinese participation in international and regional institutions, identifying the general pattern of Chinese behaviors in the multilateral setting. The course is then wrapped up in the final debate on the future role of China in the global order.

Objectives of the Course
Upon successful completion of this course, students should be able to:
- explain major Chinese foreign policy development since 1949
- analyze theoretical approaches in the examination of Chinese foreign policy through data interpretation and information gathering
- demonstrate critical thinking skills in evaluating China's modern relationship with countries in the Asia-Pacific region as well as the U.S
- develop effective essay writing skills

Literature
- Sutter, R. G. (2nd edition) (2019). Foreign relations of the PRC: The legacies and constraints of China's international politics since 1949. Maryland: Rowman & Littlefield.
- Lanteigne, M. (3rd Edition) (2016). Chinese Foreign Policy: An Introduction. New York: Palgrave Macmillan.

Instructional Format
Lectures, tutorial group discussions, individual study and feedback

Examination
An individual research paper and a final essay-writing exam.

SSC3056   Innovation Systems, Policy and Sustainability Transitions

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
SSC1027 Principles of Economics OR SCI1016 Sustainable Development: An Introduction.

Recommended
At least two 2000-level Social Sciences courses.

Objectives
To gain holistic, interdisciplinary and critical knowledge in the analyses of:
- Varieties of systems of innovation and sustainability transitions from political economic and societal perspectives, which integrates economic, social, environmental, as well as policy perspectives.
- In particular, varieties of systems (e.g. technological, regional, socio-technical systems), entrepreneurships (e.g. technological, social, environmental), sciences in systems (e.g. natural and social sciences), innovations (e.g. technological, social, environmental eco-innovations), transitions (e.g. technological, regional, societal, sustainability transitions), and alternative economies (e.g. circular economy, social economy, digital economy, bio-economy, sharing economy).
- Varieties of systems and transitions from a global perspective (e.g. contexts and cases of high and middle/low income countries, emerging markets and powers, international cooperation in between).
- Varieties of systems and transitions from a human perspective (e.g. varieties of entrepreneurships and of outcomes, e.g. agency, quality of life, well-being, happiness, peace).
- To acquire an evidence-based approach for different policy analysis and design styles, and formulation techniques on how to write a policy brief in practice.

Description of the course
The issues, that the political economic systems create while moving forward with a multitude of attempts in structuring our everyday lives and possible futures, continue to systematically socialize negative economic, environmental and social impacts over us and the world society. Much needed global societal transition towards alternative settings calls for a comprehensive understanding and the analysis of the working of the multi-scalar socio-technical systems. Accelerating the evolutionary scientific, technological and social sustainability transitions towards alternative societal futures requires a holistic, interdisciplinary and critical know-how which will be introduced by a set of lectures and enhanced by participatory discussions. Lectures and discussions are supplemented by optional multi-method research, entrepreneurial mentoring, critical advocacy and evidence-based policy writing skills sessions. After completing this course, participants will acquire working knowledge on ideas, interests, institutions of societal relevance and be able to design new actions or policies for change making in varieties of systems, sciences, innovations, transitions, economies, contexts, and, ultimately on the sustainability outcomes.

Literature
- E-reader.

Instructional format
Lectures and tutorial group meetings.

Examination
Participation, traditional or video presentation and a final paper.

SSC3059   China and India in Global Governance

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite
COR1003 Contemporary World History AND SSC2002 International Relations: Themes and Theories OR SSC1025 Introduction to Political Science.

Course Description
This course examines the emerging roles of non-Western actors in institutions of global governance. While traditional scholars of international relations focused on relations between sovereign states, this course addresses the questions of governance in a globalizing world through an examination of the interactions between international organizations (IOs) and sovereign states in shaping the contemporary global order. Given that major IOs have been led by Western powers, exploring the emerging roles of China and India in the Western-centric governance architecture is of particular interest to us. These two Asian giants have experienced unprecedented economic growth in the past decades as they have integrated more with the market economy since the 1980s. Their emerging roles as global players were acknowledged in the US National Intelligence Council's report in 2005, stating, "In the same way that commentators refer to the 1900s as the "American Century," the 21st century may be seen as a time when Asia, led by China and India, comes into its own."

We will start off by introducing the theoretical and historical perspectives on global governance. Week 2 will illustrate the rise and decline of American-led liberal international order. Acknowledging the rise of emerging powers in the current world order, Week 3 will discuss the changes of Chinese and Indian foreign policy strategies in international institutions and the rationales for their engagement. Focusing on the selected section of regimes, including climate change, infectious diseases, trade, and also foreign aid, Week 4 and 5 will examine the ways in which China and India engage to the existing global governance architecture, the tools they use and the efforts they make to influence or redesign current Western-led international institutions. Week 6 will take a closer look at the involvement of China and India in regional institutions, such as Shanghai Cooperation Organization (SCO), South Asian Association for Regional Cooperation (SAARC), and Asian Infrastructure Investment Bank (AIIB). While the Chinese and Indian leadership has contributed to regional governance, key security challenges presented by the rising powers to their neighboring countries in Asia, such as territorial disputes and river basin management, will also be highlighted. Week 7 will wrap up the course by considering the future of global governance: Can China and India collaborate on emerging global governance challenges? Are they strategic partners or strategic rivals?

Objectives of the Course
Upon successful completion of this course, students should be able to:
- Explain the evolution of global governance, and the key challenges facing governance in an increasingly globalized context.
- Analyze the impacts of emerging powers, China and India, on major Western-led international institutions and agreements.
- Explain the similarities and differences between Chinese and Indian foreign policy strategies in international institutions.
- Apply relevant theoretical and conceptual knowledge to examine real-life cases and issues in the global and regional levels.
- Develop effective essay writing skills.

Instructional Format
Lectures, tutorial group discussions, individual study and feedback

Literature
- Weiss, T. G. and R. Wilkinson (2nd edition) (2018). International organization and global governance. New York: Routledge.
- Beeson, M. (2019). Rethinking global governance. London: Springer Nature Limited.

Examination
An individual research paper and a final essay-writing exam.

SSC3060 Extractivism and (under)development in Latin America.

Semester	Period	ECTS	Concentration	Device Free
Spring	5	5	Social Sciences	No

Prerequisite

COR1003 Contemporary World History.

Recommended*:* One or more of the following courses SSC2071 Latin America: history, politics and cultures, SSC1029 Sociological Perspectives, SSC3006 The Social Study of Environmental Problems: Between Nature, Society, and Politics, SSC2046 Globalization and Inequality: Perspectives on Development, SSC2059 Social movements

Objective

- To understand the tensions and dilemmas faced by Latin American societies concerning resource extraction and development.
- To identify the social and environmental consequences of extractivism, the triggers of conflict, and activists demands. Furthermore, to reflect on the negative and positive effects of extraction projects such as mining, hydrocarbons or monocropping and the contradictions and trade-offs involved.
- To introduce students to Latin American critical theories concerning development, "underdevelopment", and the concept of extractivism, and to be able to apply concepts to other contexts within the global south.

Description of the course

This course will explore "development and underdevelopment" in Latin America, focusing on resource extraction, *i.e.* extractivism. We will analyze problems from the fields of anthropology, sociology and human geography by focusing on local and ethnic groups' experiences, and exploring the concepts, theories and alternatives coming from Latin American political and intellectual scenes. Some of these theories include Latin American perspectives on development, such as dependence theory and human-scale development, and critical perspectives such as decolonial theory, "post-development", "post-extractivism", and "*Buen Vivir*".

In the first part of the course, we will examine the invention of "underdevelopment", exploring how and when "Development" became the rhetoric to justify state intervention in ethnic territories, foreign aid and investment, and urbanization. We will discuss the ethical, epistemic, political and economic consequences of development interventions and reflect on Latin American perspectives. Later we will focus on the changes associated with Globalization and Neoliberalism after the 1990s and its implications for Latin American societies. During the second part of the course, we will focus on the boom of natural resource extraction projects assumed as a development strategy by most Latin American countries in the XXI century. Scholars and activist have conceptualized this phenomenon as "Extractivism". We will focus on case studies and environmental controversies related to mining, fossil fuels and agro-industries, and disputes for land, water and local autonomy. We will pay special attention to Indigenous and Black social movements, and reflect on what their experiences can teach us in a world increasingly concern with climate change, resource depletion and human rights.

Literature

- E-reader: selected articles and book chapters

Instructional format

Tutorial group meetings and lectures.

Examination

Group presentation (30%), final paper (70%), attendance and participation

Skills Trainings (SKI)

SKI1004   Research Methods I

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	1 / 4	2.5		No

Prerequisite
None.

Objectives
After taking Research Methods I, you will know about:
- What research is, its philosophical foundations, and what the concepts are by which to evaluate it.
- Formulating a good research question, and matching it to a systematic research design.
- Qualitative, Quantitative and Mixed Methods, and what their respective advantages are.
- Interpreting research outcomes from a wide variety of approaches.
- Basic statistics, sampling strategies, and survey question design.
- Working with SPSS and executing basic commands.

Description of the course
Research is "creative work undertaken on a systematic basis in order to increase the stock of knowledge […]". This goal can be achieved in a wide variety of ways. We can count "things", add them up, calculate statistics about them, and get a reliable overview of "things". We can also describe those "things" in great detail and question why they are the "things" that they are, and what that means in the context of those "things". Which approach is better? The answer is that this depends on what you want to learn about those ''things". In other words, if we want to "increase the stock of knowledge", it partly depends on which knowledge you are interested in increasing (your "puzzle'' and specific questions), and partly also on what you consider "knowledge" to be in the first place. In Research Methods I, we will address these issues in great detail, and we will go into how a research project can be set up in alignment with the answers to these questions.

Research Methods I (SKI1004), Research Methods II (SKI1005), and the Research Project (PRO1012) form one coherent semester-long block of courses in which you will start from scratch and end with your own finished research project. Along the way, we will discuss a wide variety of research approaches frequently used in the humanities, social sciences, and the sciences. Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other's work, no matter how diverse that may become in the course of the next three years.

The first component of this three-course block is Research Methods I. Within this block, you will learn the basics of research: about the systematic and logical aspects that are (virtually) universal across research styles, and about the differences that define them. We will develop a common vocabulary to evaluate and talk about research, and we will work on where it all begins: asking the right questions. From there, we will consider the sub-questions and hypotheses that flow from the central research questions, the data (broadly defined) that we would need to find answers, and how we can analyze that data. The remainder of the Research Methods 1 course then focuses on quantitative research approaches and the technical skills needed to support this.

Literature
- Book chapters & journal articles announced in the course manual.
- Online reader.

Instructional format
Tutorial group meetings, lectures, computer lab sessions, and online educational materials.

Examination
Grades are based on (1) a written assignment and (2) three short examinations at the end of the course period.

SKI1005   Research Methods II

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	2 / 5	2.5		No

Prerequisite
SKI1004 Research Methods I.

Objectives
After taking Research Methods II, you will know about:
- Designing a realistic research project.
- Interviewing techniques and conducting basic qualitative research.
- Designing and executing a basic survey.
- Presenting your ideas in a poster format.
- Basic methods in the sciences, and how a lab works.
- Intermediate statistics, sampling strategies, and intermediate commands in SPSS.

Description of the course
Research is "creative work undertaken on a systematic basis in order to increase the stock of knowledge […]". This goal can be achieved in a wide variety of ways. We can count "things", add them up, calculate statistics about them, and get a reliable overview of "things". We can also describe those "things" in great detail and question why they are the "things" that they are, and what that means in the context of those "things". Which approach is better? The answer is that this depends on what you want to learn about those ''things''. In other words, if we want to "increase the stock of knowledge", it partly depends on which knowledge you are interested in increasing (your "puzzle'' and specific questions), and partly also on what you consider "knowledge" to be in the first place. In Research Methods I, we will address these issues in great detail, and we will go into how a research project can be set up in alignment with the answers to these questions.

Research Methods I (SKI1004), Research Methods II (SKI1005), and the Research Project (PRO1012) form one coherent semester-long block of courses in which you will start from scratch and end with your own finished research project. Along the way, we will discuss a wide variety of research approaches frequently used in the humanities, social sciences, and the sciences. Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other's work, no matter how diverse that may become in the course of the next three years.

In Research Methods II, we will build on the foundation laid out in Research Methods I to work towards your own research proposal at the end of this course. Along the way, we will work on designing a research project that is feasible with limited resources in terms of time and money, and in addition we will work on some specific qualitative skills and techniques that will allow you to go out and do research. In the research methods Project that follows you will execute that proposal and finish with a presentation and a report about your findings. At the end of Research Methods II, we will organize specialized workshops on various methodological approaches (both quantitative and qualitative) in order to prepare you for your research in Project Period.

Literature
- Book chapters & journal articles announced in the course manual
- Online reader**.**

Instructional format
Tutorial group meetings, lectures, workshops, and online educational materials.

Examination
Grades are based on (1) a written assignment based on a fieldwork exercise, (2) an individual poster presentation due halfway through the course and (3) a group research proposal due at the end of the course period.

SKI1008   Introduction to Academic Skills I

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	1 / 4	2.5		Yes

This course is not open to exchange students.

Prerequisite
None.
Note: The instructions in this course are closely aligned with the writing assignments in COR1003 Contemporary World History and COR1006 Science, Reason and Human Progress. Therefore, students who are enrolled in SKI1008 should also be enrolled in either COR1003 or COR1006.

Objective
- To analyse and apply principles on academic writing at UCM.
- To understand and apply information literacy skills, such as formulating a research question/thesis statement and conducting a systematic literature search.
- To be able to determine what makes a good argument and apply tools to construct these.
- To analyze fundamental components to working in a PBL environment and apply these.
- To be a safe space where freshmen students can ask questions and compare notes on their experiences.

Description of the course
The transition from secondary to tertiary education is often experienced as challenging for students, especially considering the expectations at university regarding students' academic skills, such as essay writing, argumentation, or critical and analytical thinking. It is therefore imperative to support and train students right from the start to take on a professional ethos with regard to their university studies and their personal and academic development.

      The skills course Introduction to Academic Skills consists of a semester-long program spanning three periods. In this skills course, students are encouraged to take their academic development into their own hands. Tutorials, practical sessions, workshops, and (written) assignments will focus on acquainting students with the core academic skills needed to be successful at university. The sessions are set up in such a way that students will be able to put their newly acquired skills and insights into practice in the content that run parallel to this skills course.

      Through continuous reflection on their personal learning process, in combination with periodic assessment of this process, students should conclude this course with a clear overview of their competencies with regards to general academic skills as well as specific skills, including study skills, information literacy skills, analytical and critical thinking skills, writing skills, time management, and organisational skills.

Literature
- Required reading material will be available in on Student Portal.

Instructional format
Lectures, workshops and tutorial group meetings.

Examination
Two written assignments.

SKI1009   Introduction to Academic Skills II

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	2 / 5	2.5		Yes

This course is not open to exchange students.

Prerequisite

SKI1008 Introduction to Academic Skills I.

Objective

- To analyze and apply principles of academic writing at UCM.
- To understand and apply information literacy skills, such as formulating a research question/thesis statement and conducting a systematic literature search.
- To be able to determine what makes a good argument at UCM and apply tools to construct these.
- To analyze fundamental components to working in a PBL environment and apply these.
- To be a safe space where freshmen students can ask questions and compare notes on their experiences.

Description of the course

The transition from secondary to tertiary education is often experienced as a rather challenging one for students, especially considering the expectations at university regarding students' academic skills, such as essay writing, argumentation, or critical and analytical thinking. It is therefore imperative to support and train students right from the start to take on a professional ethos with regard to their university studies and their personal and academic development.

The second part of the Introduction to Academic Skills series will focus on honing the skills learned during ItAS I, and will explore skills necessary to surviving not just the first period but an entire semester at UCM. For this, we will continue to explore study skills, fine-tune academic writing skills, and practise information literacy skills. In the final part of the course, students will come together in groups to set up their research and writing project in anticipation of Introducing Academic Communication: A Writing Project.

Literature

- Required reading material will be available in on Student Portal.

Instructional format

Lectures, tutorial group meetings and workshops.

Examination

Written assignments.

*SKI2005 **Back to the Sources***

Semester	Period	ECTS	Skills	Device Free
Spring	4	2.5		No

Prerequisite
None.

Objectives
- To familiarize students with the most important types of primary sources (esp. on the history of the EU) and the ways to find these sources (heuristic objective).
- To stimulate a critical and methodical attitude towards sources (critical objective).
- To differentiate between primary and secondary sources.
- To appreciate the importance of primary sources for the study of historical phenomena in general.
- To recognize the different characteristics and pitfalls of the several types of primary sources.

Description of the course
past, instead of following another historian's argument about it. Above all, researching history implies not relying on "second-hand" information. Instead, it involves going back to the primary historical sources as much as possible. However, going back to the sources is not as simple and straightforward as it may sound. There are all sorts of difficulties involved, intellectual as well as practical.

This skills training offers a first introduction to the ways historians deal with these difficulties. During the course, students will discuss the information value of several historical sources, especially public political statements, archival records and public opinion sources. The sources that will be discussed are all related to one specific theme: the first European Community, the European Coal and Steel Community (ECSC), established in 1952 (and the first that ceased to exist, in 2002). This early episode in the history of European integration is particularly well-suited for an introduction to historical research because a variety of archival and other primary sources is readily available. It is also an interesting topic because it has led to much controversy among historians. What was the role of the leading politicians and officials involved, especially Schuman and Monnet? To what extent did existing idealism about European unity play a role? Or was the initiative to establish the ECSC rather inspired by national self-interest of the states involved?

This skills training will be a useful guide to students who are keen on doing historical research in the future. But it will also prove to be of value to those with a general interest in history and in the history of the European integration process in particular. By offering knowledge and insights on how the historian works, it will mentally equip students to assess the strong and the weak aspects of the histories they will be reading. This will enable them to inform themselves on specific topics, especially topics concerned with the process of European integration.

Literature
- Reference List.

Instructional format
Four tutorial meetings in which the literature and the written assignments are discussed, plus one feedback meeting.

Examination
Written assessment. Three short papers spread over the course.

SKI2007   Presentation Skills

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	1 / 4	2.5		Yes

Prerequisites

Students must be familiar with slideware, such as PowerPoint, Slides or Prezi.

Objectives

The purpose of this course is to improve your (academic) presentation skills, by learning how to:
- recognize and apply key components of an (academic) presentation;
- structure a message in a clear, concise and convincing manner;
- convey complex information clearly, both verbally and visually;
- design an engaging narrative, which is tailored to the audience;
- interact with and respond to non/verbal input from the audience;
- cope with nervous tension and gain more confidence as a speaker;
- give and receive constructive feedback on academic presentations.

Description of the course

This course will help you to prepare for future presentations in your studies as well as in your professional career. Apart from an introduction lecture on the basics of presentation skills and a workshop on the basics of slide design, this course is based on learning-by-doing. You will give four presentations: one 5-minute presentation on an informal topic determined by the course coordinator, and three 12-to-15 minute presentations of an academic nature. You can choose your own topics for your academic presentations; preferably topics you are interested in and have already researched. You will receive and provide constructive verbal feedback on all presentations.

You will receive feedback on your own presentations and provide feedback on your peers' presentations on e.g.:
- *Delivery*: speech pace and pauses; tone of voice; body language such as posture, gestures, movement.
- *Structure*: providing an introduction, body and conclusion, with clear transitions between different sections of a presentation, using a logical sequence of information, with main points and subpoints.
- *Content*: providing sound descriptions and interpretations of the main topics, supported by relevant academic methods and theories and other reliable sources, and clarified with examples or metaphors.
- *Visual Aids*: using slideware that supports, and does not distract from, the content of the presentation, including key words, clarifying images such as (photo)graphs, and entertaining touches such as cartoons.
- *Audience*: tailoring the form and content of one's message to the audience; interacting with the audience during the presentation as well as adequately responding to verbal and non-verbal input from them.

Literature
- None.

Instructional format

An introduction lecture on basic presentation skills, a workshop on the basics of slide design, and group tutorials.

Examination

One informal 5-minute presentation (pass/fail).
Two 12-to-15 minute academic practice presentations (2 x 25%).
One 12-to-15 minute academic final presentation (50%).

SKI2047   Gaining Racial Literacy

Semester	Period	ECTS	Skills	Device Free
Spring	5	2.5		Yes

Prerequisite
At least one course in sociology, cultural or gender studies.

Recommended
This course is particularly suitable in combination with SSC3040 Identities, HUM3040 Crucial Differences in the 21st Century, HUM2003 The Making of Crucial Differences.

Objective
- To gain the ability to recognize and interpret racial codes and racialized practices.
- To learn to be empathetic to multiple lifestyles, experiences, needs and viewpoints.
- To sharpen intercultural communication skills that are necessary to operate and work in a multi-racial environment.
- To learn a racial grammar and vocabulary that enables you to discuss race, racism, and the need for antiracism work with people who do not normally recognize it.

Description of the course
In this skills training, we will examine how racism works structurally and individually and how, this, in turn, affects us in our everyday lives. If we want to bring about fundamental change in our societies we need to become racially literate which means to develop the ability to discover racism in all its forms - subtle and overt, every day and institutional - and we need to learn how it impacts ourselves and others. The course builds on the premise that although white and BIPOC persons are affected differently by racism, all groups are affected deeply. Although the focus will be on racial identities we look at this through an intersectional lens, i.e. how does race intersect with other social categories such as class, gender and sexuality. By making use of a variety of different tools such as storytelling, role-play, empathic listening and small writing assignments, we will develop skills that will make us better equipped to deal with issues of racial injustice. Through role-playing exercises, for instance, we will stage situations we may have experienced and, collectively, we will find alternative re-enactments that will provide workable solutions for these racial situations. This process will take place via emotional involvement into the original situation and it will be followed by a discussion, which will, in turn, allow participants to gain analytical distance. This process might have to be repeated several times. By engaging in dialogues of race, we will relearn and reprocess emotions, thoughts, and perhaps, ways of being in the world that come with the social construction of our racial identities. The recognition of racial codes and racialized practices will be refined through racial justice logs. Through detailed recordings of racialized situations in their everyday lives, participants will exercise their ability to recognize that they live in a racialized environment. Their day may start, for instance, by opening the newspaper where Blackness is underrepresented and it may end with a film where Blackness is represented in biased ways. Excerpts from their ongoing racial justice logs will be shared in class intermittently, followed by a discussion. The Digital Story project as the culmination of the course will allow us to retell aspects of our biographies and/or family history from a racial justice perspective. If history is present in everything that we do, as James Baldwin argues, then where better to start than in our own family history? This is when an investigation into how race has been done throughout our lives becomes meaningful. Participants will use this multimedia platform to re-evaluate their lives using the tools and concepts they have learned in this course. As the study of larger racial discourses such as colorblindness for instance, is an important aspect of anti-racism work, we will begin the process of unlearning practices that we have picked up since childhood. Throughout the course, we will grapple with France Twine's contention that racial identities are changeable and movable – at least to some extent. This may help us to get away from monolithic ways of conceptualizing racial identities and, instead, adopt more fluid practices of speaking, writing, seeing and perceiving. The course is open to all UCM students, particularly to those who aspire careers in international politics, NGO work along the North-South divide and international relations.

Literature
We will draw upon readings from a range of interdisciplinary scholars and writers such as Frances Winddance Twine, George Yancy, Robin di Angelo, Lillian Smith and Resmaa Menakem.

Instructional format
According to the skills training format there will be in-class exercises such as role-play exercises, group discussions and small writing assignments. The course will have a pragmatic and hands-on approach.

Examination

The assessment of the course will be comprised of a racial justice log and a final Digital Storytelling project in which students tell their own story from a critically reflective racial justice perspective.

SKI2048   Introduction to Discourse Analysis

Semester	Period	ECTS	Skills	Device Free
Spring	5	2,5		No

Prerequisites
None.

Objectives
In this introduction to discourse analysis, students will acquire:
- Basic knowledge of some discourse analytical theories;
- Basic methods for investigating the socially constructed nature of perceptions of "reality";
- Basic skills for applying multi-level discourse analysis.

Description of the course
　　This course starts from the assumption that a discourse is socially constructed. A "discourse" is an ensemble of verbal and non-verbal practices that reciprocally structure and are structured by our perceptions of the world around us. Discourses do not just translate reality into language, but influence how we see reality. Discourse analysis provides us with the methodology to critically assess naturalized uses of language and to challenge the tacit knowledge that underlies our perceptions of reality.
　　Following Critical Discourse Analysis (CDA), we will concentrate on conducting and integrating textual and contextual explorations of diverse written texts. In addition to applying analytical tools to texts, we will focus on how to relate textual representations and socio-political contexts, as well as how to relate textual representations and the linguistic components of texts. For instance, we will examine how using particular linguistic forms can create representations of actors and their speech that convey ideologically-laden messages about them. Students are expected to prepare for the tutorials by reading assigned background literature, viewing presentations and doing practice exercises before the meetings.

Literature
- E-reader.

Instructional Format
Lectures and tutorial group meetings.

Examination
Grades are based on:
(1) Written discourse analyses [50%];
(2) Peer review of analysis [20%]; and
(3) Presentation of discourse analysis [30%]

SKI2049   Argumentation I

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	1 / 4	2.5		Yes

Prerequisite
Students who take the course need to have written at least one academic paper.

Objectives
This skills training provides a general introduction to the analysis of arguments. At the end of the skills training students should be able to:
- Identify and carve out the underlying structures and logical connections of written and verbal arguments.
- Translate these structures into a visual representation by drawing patterns of these arguments.
- Evaluate arguments with regards to their structure and content by applying Govier's "ARG method" (this entails the ability to identify fallacies).
- Build and present own arguments in a structured and cogent fashion, taking the evaluative criteria of the "ARG method" into account.
- Improve their approach to structure papers, exam answers and presentations.

Description of the course
In this skills training we work from two fundamental assumptions regarding arguments:
1. They have a specific structure, which can be made visible and evaluated.
2. The quality of an argument depends on its structure as much as it depends on its content.

In order to "get a grip" on arguments the course is divided into four parts that introduce information and exercises to gradually develop the skill of argument analysis. The first part will serve as an introduction discussing the general characteristics and typology of arguments. Furthermore, in this part students learn how arguments can be standardized and how argumentative structures can be visualized by drawing patterns. The core question this part of the course seeks to answer is: What is the structure of arguments and how can one reveal this structure? This part of the course will also contain an introductory lecture, entitled "Standardizing Arguments".

In part two an informal but systematic method for evaluating the quality of arguments, the ARG-method, is introduced. By assessing the acceptability of premises, the relevance of premises with regards to the conclusion they are supposed to support, and the logical connection between premises and the following conclusion, the ARG-method enables us to examine both structure and content of an argument. During this part of the course an introduction to bad arguments, so-called fallacies, is provided as well. A Lecture, "Evaluating Arguments", will accompany this part of the course.

In the third part the knowledge and skills provided in the first two parts will be applied to complete texts, seeking to isolate the arguments they present in a systematic way and evaluate whether or not they are good arguments.

Part four moves beyond the analysis of already existing arguments. In this part, standardization and patterns of arguments, as well as the ARG-method, will be used to construct arguments. Furthermore it will be practiced how the skills learned throughout the course can be applied for the purpose of writing academic papers.

Note: Students considering enrolling for the skill trainings in argumentation should be aware that the course will not focus on rhetoric and debating skills (although it can be assumed that the analytical skills acquired in this course will be helpful for debates).

Literature
- E-reader with various articles and chapters on argument analysis and logic.

Instructional format
Assignment-based discussion, supplemented by lectures.

Examination
A midterm assignment asking students to conduct an analysis of one of their own papers using the techniques of argument analysis and a final assignment in which students compose an argument of their own.

SKI2077 Lab Skills: Cell Biology

Semester	Period	ECTS	Skills	Device Free
Spring	4	2.5		No

Prerequisite

This course is designed to be taken in combination with SCI2037 Cell Biology. Students who wish to take this course should concurrently enroll in SCI2037 Cell Biology prior to enrolling in SKI2077.

Objective
- To develop laboratory skills in the field of cell biology.

Description

The aim of this course is to develop competences in the planning and performance of experiments and in the evaluation of results using common techniques in molecular genetics and cell biology. The skills training starts with an introductory lecture providing information on the assignments as well as an introduction into Good Laboratory Practice (GLP) and Safe Laboratory Practice (SLP). Students perform experiments on several different topics.

Literature
- There is no main book for this course. A list of the books in which these suggested readings can be found is provided; these books are all available in the Reading Room at UCM and/or in the library at the UNS50. In addition to the books, E-reader will be posted in the Student Portal.

Instructional format

Practical assignments and lectures. The practical assignments take place at the laboratories of the Faculty of Medicine, Health and Life Sciences (FMHL) in Randwijck.

Examination

Assessment will be based on written assignments (in pairs of 2 students) prior to each practical, a presentation (in pairs of 2 students) to conclude the practical sessions, and a written exam in the final week.

SKI2079   Lab Skills: Human Anatomy & Histology

Semester	Period	ECTS	Skills	Device Free
Spring	5	2.5		No

Prerequisite
This course is designed to be taken in combination with SCI2009 Human Physiology. Students who wish to take this course should concurrently enroll in SCI2009 Human Physiology prior to enrolling in SKI2079.

Objectives
- To gain knowledge and experience in microscopic studies of the histology of blood vessels, tissue types and organs.
- To gain knowledge and experience in macroscopic studies on corpses with regard to the anatomy of the thorax and abdomen.
- To gain knowledge and experience in macroscopic studies on human plastinates and models with regard to the anatomy of the kidney, lungs, heart, vessels and the digestive tract.

Description of the course
The aim of this skills training is to familiarize students with skills and knowledge concerning human anatomy and histology. The histology part entails a practical introduction to virtual microscopy, followed by microscopic studies of the histology of blood vessels, individual cell types and structures in diverse tissues of the circulatory, urinary, respiratory and digestive tract where the computer serves as microscope. Each "virtual microscopy" session has to be prepared at home using a digital histology atlas (provided) and a Powerpoint manual with internet links to the sections and tasks. During the sessions, students present those tasks to each other and questions can be asked to clarify issues. At the end of each session, students will have produced their own histology booklet, complete with annotated histology pictures.

If you have a histology book, it is highly advisable to use it, but the online atlas is very good. Please be aware that preparation will take 2 to 4 hours per session. Normally, the histology sessions take place on campus, but this year, they may have to be scheduled online. If they are online, they will start at 11:30 and take 90 minutes, if they are on campus, they will start half an hour earlier and take 120 minutes. Students are encouraged to work in groups of two (in the histology section of the course when on Campus) or more (in the anatomy section of the course) to discuss their findings. The macroscopy part of the course will take place on campus entails an introduction to the autopsy room. Students will perform observatory studies on corpses, models and human plastinates guided by a list of tasks and questions, part of which needs to be studied in advance at home.
Both for the histology sessions and the anatomy sessions, a self-study manual and a manual for the actual practical session are provided. Students are expected to prepare the self-study manuals at home – for the histology session, they will receive a link to a short online self-test with questions on the manual that they prepared.

- Agur, A.M.R., Dailey, A. F. (2013) *Grant's Atlas of Anatomy*. (13th ed.) Philadelphia, Wolters Kluwer.A
- Practical instruction manuals and short atlasses (E-reader).

Instructional format
Practical assignments and lectures. The practical assignments take place at the laboratories of the Faculty of Medicine, Health and Life Sciences (FMHL) in Randwijck. The Anatomy practicals will all take place at UNS50, 2nd floor, department of Anatomy and Embryology. The Histology sessions may be given online, depending on the regulations around the Covid19 pandemic in April/May.

Examination
Student evaluation will be based on four written short tests after every studied organ, a written exam at the end of the course, and the students' behaviour during the practical sessions (formative).

SKI2083   *International Negotiation*

Semester	Period	ECTS	Skills	Device Free
Spring	5	2.5		Yes

Prerequisite
None.

Objectives
- To teach students the negotiation skills required to achieve optimal outcomes in a multicultural and often multilateral setting like the EU, UN or an international business meeting.
- To teach students to make a detailed diplomatic paper from the perspective of one of the following: an EU member state, EU institution, a non-EU state.
- Students will acquaint themselves with the negotiating approaches of the country, company, institution they are representing.
- To train students in planning negotiations carefully-deciding on the most useful alliances etc.
- Students will participate in a complex negotiation of around 4.5 hours where they will to put into practice what they have learnt.

Description of the course
In this skills course students will learn about international negotiations and how countries, companies and institutions plan and seek to achieve their goals in a multicultural and often multilateral setting. Students will learn the negotiation and cultural skills necessary for completing a successful international negotiation: analytical, strategic, social and bargaining. Students are trained to analyze complex negotiation situations and to then apply the theories that they have learnt to maximize their outcomes.
After every simulation, the students discuss their strategies/ negotiation skills and outcomes with their peers and the tutor. In the final EU simulation, students will enjoy the challenging experience of participating in an international negotiation.

Literature
- Roger Fisher and William Ury, Getting to Yes Negotiating an agreement without giving in (2nd edition), Random House Business Books 2012.
- C. Moore, P.J. Woodrow, Handbook of Global and Multicultural Negotiation Jossey-Bass 2010.

Instructional format
Assignment-based discussion. The skills training also contains practical assignments.

Examination
A diplomatic paper and the final negotiation both of which are graded and position papers which are pass/fail.

SKI2084 Writing in an Academic Context: Improving Argumentation and Style

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	2 / 5	2.5		Yes

Prerequisite

In this course you will be working on a previously completed academic paper that is written in English. If you are an exchange student, you may want to translate your paper from your native language to English before the course starts.

Objectives

- To develop awareness of the conventions of academic writing.
- To write clearly and coherently in an academic context.
- To develop writing through peer- and tutor feedback.

Description of the course

This course is designed to help students polish their academic writing skills. Since good writing means conveying ideas in a clear and concise manner, this course gives you the tools and techniques for this by exploring topics like the rules of syntax, overall paper coherence, argumentative structure, and conciseness.

The course looks beyond the content of academic articles to examine the fundamental mechanics of writing. This will be done in the form of weekly exercises that are prepared in advance and discussed in class, and through giving and receiving in-depth feedback.

This course is interactive and writing intensive. Although sharing your writing with others can seem intimidating, this writing course is a safe space for you to work, make mistakes, and improve your writing..

Literature

- Readers on student portal

Instructional format

Tutorial group meetings, a lecture, full-class discussions and small group discussion, weekly readings and home exercises.

Examination

Written assignments.

SKI2085   *Ethnography and Qualitative Interviewing I*

Semester	Period	ECTS	Skills	Device Free
Fall	1	2.5		No

Prerequisites
SKI1004 Research Methods I, SKI1005 Research Methods II and PRO1012 Research Project.

Recommended
This course is for students with a background or sincere interest in sociology, anthropology and/or cultural studies.

Objectives
- To get a general impression of the qualitative research process and its fundamental differences to quantitative data analysis.
- To become familiar with the "art" of qualitative interviewing.
- To practice taking fieldnotes.
- To provide students with hands-on experience in crafting their own study and writing a feasible research proposal.

Description of the course
Qualitative Research is an overarching term for a diverse range of approaches and methods within different research disciplines. Qualitative researchers essentially "study things in their natural settings, attempting to make sense of, or interpret, phenomena in terms of the meanings people bring to them" (Ritchie 2003: 3). Ethnography is one form of qualitative research and means literally "writing culture" (Hesse-Biber 2006: 230). Often called "participant observation", ethnography is based on the simple idea, that in order to understand what people are up to, it is best to observe them by interacting with them up close and personal within their everyday lives. Ethnographers provide detailed accounts of the everyday practices of a culture, subculture, organisation or group by "hanging out", observing and recording the ongoing social life by taking fieldnotes and/or providing "thick descriptions" (Hesse-Biber 2006: 230).

This is part one of an overall sequence of three skills trainings within which students design and implement their own study, analyze the data collected, and report on their research findings. In this first module students will learn about various research tools, such as participant observation and qualitative interviewing. Students will learn how to take fieldnotes and will be introduced to various forms of interviewing, such as the structured interview, the in-depth interview, focus groups and life history interviews. Taking fieldnotes and interviewing will be practiced in and outside of the classroom. Moreover, students will be guided through the process of crafting a feasible research question and the appropriate design for the study that they will pursue in the follow up modules of this course. The research questions will provide the basis for students' investigations. What is to be investigated is entirely up to the student(s). However they will be provided with guidance in the formulation of their topics.

In this course, students will have to conduct at least one interview, thus you will need to have access to a tape recorder and/or video camera.
Note: This is a time and labor intensive skills training, especially once you have begun data collection in the second module of the course. Most of the work that you are required to accomplish will occurr outside of the class setting. Students are expected to work independently and should count on having to invest an extra two to four hours per week for interviewing, transcribing the interviews and working on the data analysis.

Literature
- Hesse-Biber, S.N. (2011). *The Practice of Qualitative Research*. Sage Publication, Thousand Oaks, California, Second Edition.
- Burawoy, M. (2000). *Global Ethnography*. Berkeley: University of California Press.
- Excerpts from several books on qualitative research that are available at the UCM reading room, for example, Silverman, D. (2005). *Doing Qualitative Research,* Rubin, H. (2005). *Qualitative Interviewing: The Art of Hearing Data* and Ritchie, J. (2003). *Qualitative Research Practice*.

Instructional format
Lectures, group discussions and in class exercises on interviewing and taking fieldnotes.

Examination
Presentation of two qualitative studies and a written research proposal.

SKI2086   Lab Skills: Biochemistry

Semester	Period	ECTS	Skills	Device Free
Fall	2	2.5		No

Prerequisite
This course is designed to be taken in combination with SCI2035 Biochemistry. Students who wish to take this course should concurrently enroll in SCI2035 Biochemistry or have taken SCI2035 Biochemistry prior to enrolling in SKI2086.

Objective
- To develop laboratory skills in the field of biochemistry.

Description of the course
Laboratory skills are essential for students who want to pursue a Life Science oriented master study. In this skills training you will get acquainted with the basic laboratory skills in biochemistry. Training involves safety and Good Laboratory Practice, as well as some essential biochemical techniques like DNA isolation, enzyme kinetics, absorption spectrophotometry, and protein gel electrophoresis. You will measure cholesterol levels in various food samples and you will determine the presence of sugars and identify the types of sugars in unknown samples, solving a sugar-riddle. You will work in teams of two and prepare your own protocol for each practical.

Literature
- Reed, R., Holmes, D., Weyers, J., Jones, A. (2007). *Practical Skills in Biomolecular Sciences*. (3rd ed.). Essex: Pearson Education Limited (Reading Room).
- Practical instructions and background texts (E-reader).

Instructional format
An introductory lecture and practicals. The practicals take place at the laboratories of the Faculty of Medicine, Health and Life Sciences (FMHL) in Randwijck.

Examination
Student evaluation will be based on written protocol proposals (in pairs of two students) and lab journal entries for each practical, written lab reports (in pairs of two students) for 2 of the practicals, and a final practical exam (individual assessment).

SKI2088   Lab Skills: Genetics

Semester	Period	ECTS	Skills	Device Free
Fall	1	2.5		No

Prerequisite

This course is designed to be taken in combination with SCI2022 Genetics and Evolution. Students who wish to take this course should concurrently enroll in SCI2022 Genetics and Evolution or have taken SCI2022 Genetics and Evolution before.

Objective

- To develop basic laboratory skills in the field of genetics.

Description of the course

The aim of this course is to introduce students to the basic principles and techniques in genetics, to develop basic competences in the planning and performance of experiments and the evaluation of results, as well as writing reports. The course consists of 6 sessions of approx. 4 hours and covers topics such as DNA and RNA isolation/purification, spectrophotometry for nucleic acid quantification, amplification of specific genetic regions, gel electrophoresis and basic bioinformatics (commonly used databases, finding the genetic location of a specific gene and its gene sequences, design amplification primers for a specific genetic region, etc) using online available tools. The emphasis will be on genetic variation, which is relevant for human clinical diagnostic setting, evolution studies, etc. Furthermore, this course provides basic knowledge on Good Laboratory Practice (GLP) and Laboratory Safety Regulations. Besides the 4 hours hands-on time in the lab, each session requires 1-2 hrs of preparation beforehand and 1-2 hrs for reporting afterwards. Students will work in pairs. Lab experience is not required, although biological and chemical background knowledge at secondary school level is recommendable for full understanding of the provided techniques. If necessary, in the first lab session, pipetting skills will be trained.

Literature

A course manual containing background information on the experiments and experimental protocols will be provided. For each training session the manual will contain questions that will help the student to prepare the experiments.

Instructional format

This course consists of an introductory lecture and 6 practical trainings. These take place at the laboratories of the Faculty of Medicine, Health and Life Sciences (FMHL) at the Randwijck campus (Universiteitssingel 40, 50 and 60).

Examination

A written report (per pair) and an individual exam consisting of multiple choice and open questions.
General behavior and attitude during lab work will also be taken into account in the final grade.

SKI3002   Argumentation II

Semester	Period	ECTS	Skills	Device Free
Fall	2	2.5		Yes

Prerequisite
SKI2049 Argumentation I.

Objectives
Argumentation II is the sequel to Argumentation I. In this respect the main objective of Argumentation II is to further develop the skills of argument analysis and design. The particular focus of this skills training will be on the structure of arguments. At the end of the course students should be able to:
- Identify and assess the different functions that different parts of an argument fulfill according to the Toulmin model.
- Formally evaluate the validity of arguments by applying the basic methods of sentential logic.
- Build and present arguments of their own according to the Toulmin model.

Description of the course
In this sequel to SKI2049 Argumentation I, we will zoom in on the structure of arguments. In the first part of the skills training the Toulmin model of argumentation is introduced. This model goes beyond the basic distinction of premises and conclusions as constituent parts of arguments by distinguishing the different functions that premises can fulfill. The Toulmin model is more flexible than argumentative analysis based on formal logic, but also more specific and logically rigorous than the tools introduced in Argumentation I. Therefore it can be a powerful tool for specific and sophisticated argumentative analysis. Such analyses will be conducted during this skills training, first on small, simplified academic arguments and afterwards on a larger scale, analyzing examples from real life discourse. Finally, in the midterm assignment, students are asked to apply the Toulmin model to design an argument themselves.

      The second part of the course takes the analysis of argumentative structures a step further and the tools that are used are logically even more rigorous. This part introduces students to basic sentential logic, a strictly formal, almost mathematical approach to argument analysis. Sentential logic introduces a simple set of rules and procedures that allows students to test whether an argument is formally valid, i.e. if its structure is correct, independent of its content. To test for the validity of an argument in this way, the structure of English sentences will be separated from their content by translating the sentences into symbols; afterwards formal rules will be applied (by using truth tables and semantic tableaus) to check whether an argument logically works or not.

      Note: Students should be aware of the abstract nature of formal logical reasoning when enrolling for this course. Learning this is highly valuable to train a particular way of thinking, but students might perceive this skill as less directly applicable to, for example, paper writing or discussions than the tools that are introduced in Argumentation I.

Literature
- E-reader.

Instructional format
Assignment-based discussions supplemented by lectures.

Examination
A midterm assignment that requires students to design an argument using the Toulmin model and a written final exam on formal logic.

SKI3003 Research Studio, Introduction to Applying an Art Practice as Research Method

Semester	Period	ECTS	Concentration	Device Free
Fall	2	5	all	No

Prerequisites
HUM1011 Introduction to Art and at least one of any of the following courses: HUM1012 Pop Songs and Poetry, HUM2013 The Presence of Art, HUM2031 Cultural Studies II, HUM2043 Film Art, HUM3036 Narrative Media or HUM3043 Acts of Literature.

Students who register for SKI3003 Research Studio, introduction to applying an art practice as research method also have to register for PRO3015 Research Studio, where art and academia meet in the same semester. It is not possible to take either module separately due to the integrated set-up of this skills training and the project.

Objectives
The learning objectives addressed in the skills training part of Research Studio are as follows. Students will learn:
1. To familiarize themselves and engage with a variety of (artistic) research methodologies.
   This includes being able to recognize different forms of artistic research, being able to critically reflect on their application in different contexts and being able to relate them to (and potentially pair them with) academic methods of research.
2. Ways to engage in and discuss an art practice.
   This includes the use of artistic methods to generate knowledge (see objective 1) and the ability to distinguish between an art practice and artistic research.
3. Collaboration in a diverse and interdisciplinary team.
   This includes teamwork and communication skills as well as adaptability and reflection on one's strengths and weaknesses in contributing to the team-effort.
4. To transfer their knowledge and skills to a practical issue of societal concern.
   This includes critical analysis of the topic, recognizing what questions can be raised and what approaches can be taken to address these questions.

Description of the course
The two modules of Research Studio invite to explore conducting research in an interdisciplinary team consisting of theatre artists and academics. Bridging the domains of art and academia, Research Studio challenges students to get out of their 'comfort zone' and transfer their academic knowledge and skills to a new working environment. This interdisciplinary view on research is underpinned by the idea that art and academia are not separate domains, but 'particular kinds of experimental practices in a more general experimental culture' (Gere, 2010). Taken together, the skills training and project trigger creativity, require adaptability and endorse critical reflection on established research practices, methods and ways of knowing. They challenge to critically consider the questions how do we know what we know? And what for?

Participants in Research Studio are part of an interdisciplinary team. Together they work on a topical issue, guided by both a theatre professional and an academic researcher. The aim is not to turn UCM students into theatre artists or to 'make theatre'. Instead, the aim is to explore ways in which practices and insights from theatre can help to get to know about the topic of the research. Hence, the project welcomes students from all concentrations. All team-members contribute based on their personal backgrounds, expertise and interests. No specific experience in theatre or any other art practice is expected. Students should be open to experimenting with new or unfamiliar ways of conducting research, using for instance the body as a research instrument.

Instructional format and assessment
As an introduction to research incorporating an art practice, the project involves a variety of activities from both theatre and academia. Examples are discussion / brainstorm sessions, lectures, practical workshops, fieldtrips and individual reading and writing. During the first part (skills training) the focus is on how an art practice can contribute to getting to know about the world, for example as a research method or by providing insight in what questions could be asked or how to come up with research questions. Assessment focuses on documentation of and reflection on the learning process. For this students start a personal research portfolio, which they continue in period 3. Additionally, they work towards creating a research plan of their own in which they include (insights from) an art practice they learned about. The research plan will be implemented in period 3.

SKI3050   Preparing Conference

Semester	Period	ECTS	Skills	Device Free
Fall	2	2.5		No

NB: Students who register for SKI3050 Preparing Conference must also take PRO3006 Conference. It is not possible to take either of these modules separately due to the specific nature of this skills training and the project.

Prerequisite
It is necessary that students have passed several courses, skills trainings and projects on a 2000 level and/or a 3000 level in Humanities, Sciences and/or Social Sciences. The reason is that students will base their individual contribution to the conference on their UCM curriculum. It is therefore recommended for students to participate in their fourth semester or later.

Recommended
SKI2007 Presentation Skills.

Objectives
- To train students in skills required for preparing an academic conference.
- To give students the opportunity to position their interest within a field of their choice and academic fields in general and express that by means of activities at a conference such as lectures and workshops.
- To train students to work together and set up PR, logistics, and plenary sessions for a conference.
- To train students in using a framework for instructional design and apply its principles to their individual contributions to the conference.
- To train students in writing lesson plans with one or two fellow students for their individual contributions to the conference and the plenary sessions that will be offered.
- To train students in working together on preparing a conference.

Description of the course
A conference is a platform for scholars or professionals to meet and share ideas, to present new discoveries and to connect to fellow academics. At a conference papers and research posters are presented, workshops are offered for skill development, and seminars are held to familiarise the scientific community with current academic topics and new developments. As an academic you visit a conference to present your own work, see others' work and to start possible collaborations.

This skills training focuses on the preparation and planning of a conference. Students will write extensive plans for the annual UCM Liberal Arts and Sciences conference to be held in the third period of this semester. Students will do the following in order to develop these plans:
1) Discuss the shared assumptions, values and goals of Liberal Arts and Sciences and an open curriculum and turn that into a subtheme for the conference.
2) Discuss and compare individual interests within the group to find similarities and differences and turn that into workshops and lectures at the conference which will be offered in collaboration with one or two fellow students.
3) Discuss instructional design (teaching and learning) in terms of knowledge, skills and attitudes and use that to work out lesson plans for the conference for workshops and lectures.
4) Discuss PR and logistics, the opening session, the parallel session and the closing session of the conference and collect their preparations and plans in a team portfolio.

Note that this skills training is not only about presentation skills and organisation skills. It also aims at giving students the opportunity to learn more about education and teaching and instructional design.

The skills training relies heavily on students' personal experiences from having been in a liberal arts and sciences program for several semesters and on being able to make that explicit to others. On the one hand, this will be used while preparing the conference and to inform first semester UCM students. On the other hand, participating students will benefit from the skills training and its follow-ups by fostering a preparation for e.g. Capstone and master's applications for which a profound understanding and expression of a student's academic interest will be necessary.

The skills training puts a strong emphasis on instructional design. Individual contributions to the conference are considered to be educational units and approached as such. For participating students, this will be an opportunity to gain experience with developing and designing intended learning objectives and then

implementing teaching and learning activities for a target group and audience. Students will inform themselves on different approaches to teaching and apply them to preparing lesson plans for the lectures, workshops and plenary sessions offered at the conference.

A wide variety of individual interests in the Sciences, Social Sciences and Humanities is welcomed in order to offer a diverse conference. This skills training fosters an interdisciplinary approach among the participating students.

Literature
- E-reader.

Instructional format
Training, feedback and peer review in small groups.

Examination
Students will be assessed and graded on (1) a conference team portfolio, and (2) a lesson plan for their lecture and workshop (assignment by two or three students).

SKI3052   *Ethnography and Qualitative Interviewing II*

Semester	Period	ECTS	Skills	Device Free
Fall	2	2.5		No

Prerequisite

SKI2085 Ethnography and Qualitative Interviewing I.

Objectives

- To provide students with hands-on experience in collecting data for their own study, i.e. students will gain experience in "doing observations", taking fieldnotes, and qualitative interviewing.
- To experience transcribing interviews.
- To become familiar with qualitative data analysis.

Description of the course

This is the second of a three module course on qualitative research methods. This module builds on what students have learned in part I and is designed to guide them through the steps of data collection for their own qualitative study. Students will work on gaining access to their research site and will begin the interview process and/or their observations and conversations with their research participants as participant observers. Students will be introduced to the process of transcribing the interviews, coding the data and memo writing. All three steps are part of qualitative data analysis. As students develop their research projects, they will be challenged to link their specific research questions to larger processes and forces. They will also be asked to consider who might find their research useful and how the results of their investigations might be utilized to promote social change. In-depth analysis of the intricacies underlying contemporary social, cultural, and political discourses and practices, provides the basis for good social research.

Note: This is a time and labor intensive skills training, especially once you have begun data collection. Most of the work that you are required to accomplish for the training will occurr outside of the class setting. Students are expected to work independently and should count on having to invest an extra two to four hours per week for interviewing, transcribing the interviews and working on the data collection.

Literature

- Hesse-Biber, S.N. (2011). *The Practice of Qualitative Research*. Sage Publication, Thousand Oaks, California, Second Edition.
- Burawoy, M. (2000). *Global Ethnography*. Berkeley: University of California Press.
- Excerpts from several books on qualitative research that are available at the UCM Reading Room, for example, Silverman, D. (2005). *Doing Qualitative Research* Robin, H. (2005). Qualitative Interviewing: The Art of Hearing Data and Ritchie, J. (2003). Qualitative Research Practice.

Instructional format

Tutorial group meetings and lectures.

Examination

Key aspects of work produced during data collection and analysis.

LAN2000   Language Trainings

Semester	Period	ECTS	Skills	Device Free
Fall / Spring	1 / 2 and 4 / 5	2.5		Yes

Prerequisite
Language trainings are open to all UCM students. Within the UCM curriculum a language course counts as a 2000-level skills training. Each student can take up to two language courses or 5 ECTS in total. UCM uses a specific registration procedure for language trainings (see below). To determine the level of a course that is suitable to a student's proficiency in the language, the registration procedure might include an intake interview with a teacher of the language in question.

Objective
Please refer to the website of the Language Centre UM, www.maastrichtuniversity.nl/languages, for further information about the levels, intake requirements and content of the courses.

Description of the courses
Students can choose a language course from the list of courses that are on offer for UCM students as long as it is not English or their native language. It goes without saying that the choice of a certain language course can be related to future plans and the country students select for doing their semester abroad. However, this is not obligatory.

Literature
Most courses use standard text- and workbooks that can be obtained at Studystore. In some courses materials will be used that the Language Centre UM has developed. Those materials will be handed out to you by your tutor or they will be sent to you by e-mail or Student Portal. Further information on the books that need to be obtained can be found at the website www.maastrichtuniversity.nl/languages.

Instructional format
Dutch courses run for 7 weeks (two sessions per week) or 14 weeks (with one session per week). The modern languages courses run for 14 weeks (with one session per week). Please note that the majority of language courses are taught in the late afternoon or evenings.

Examination
All language courses will use an attendance and assessment procedure to determine whether or not you have passed or failed the course. The test results will be graded on a 10-point scale.

Attendance
Language courses have an attendance requirement of 85%, which means that you are allowed to miss two sessions. If you miss three sessions you must give your tutor a valid reason. The tutor will then decide on the validity of the reason. Only if your reason is held to be valid, you will be given an extra task by the tutor. If you miss four sessions or more you fail the course.

Registration procedure
Indicate "SKI2000 Language Training" in the list of skills on the Course Registration Form. You will then be contacted to register for the specific course. If necessary the Language Center will send you a request for an intake interview to determine your current proficiency.

Projects (PRO)

PRO1010   *Introducing Academic Communication: A Writing Project*

Semester	Period	ECTS	Project	Device Free
Fall / Spring	3 / 6	5		Yes

This course is not open to exchange students.

Prerequisites
SKI1008 Introduction to Academic Skills I and SKI1009 Introduction to Academic Skills II.

Objective
- The aim of this project is to acquaint Liberal Arts & Sciences students with the process and practice of writing an interdisciplinary research paper. Furthermore, the goal is to familiarize students with working in an interdisciplinary group. The tutor will assist students in this process and will be available to offer support, guidance and feedback. The emphasis of this project, however, will lie upon students' own input, planning and group work.

Description of the course
To be a Liberal Arts & Sciences student means to have a broad interest and to be able to approach problems from different perspectives. Working together with students from different disciplines on the same problem, is a crucial part of being a true Liberal Arts & Sciences student.
Furthermore, while communication plays an important part in everyday life, within academia it is essential. Having good communication skills involves being able to express your ideas and findings in a clear and concise manner, within the guidelines set by the academic community.
In this project, students will practice writing an academic piece in an interdisciplinary team. Students will be expected to put the skills learned in Introduction to Academic Skills I & II into practice and write an extensive research paper. The project is mainly based on peer-to-peer education; by writing a paper in a small, interdisciplinary group, students will be able to both share their skills and knowledge and learn from each other.

Literature
- Required reading material will be available in on Student Portal.

Instructional format
Lectures and tutorial group meetings.

Examination
Written assignments.

PRO1012   Research Project

Semester	Period	ECTS	Project	Device Free
Fall / Spring	3 / 6	5		No

Prerequisites
SKI1004 Research Methods I and SKI1005 Research Methods II.

Objectives
After doing the Research Project, you will know about:
- Conducting a well-designed research project from start to finish.
- Academic writing in the context of empirical research.
- Presenting empirical research outcomes.

Description of the course
Research is "creative work undertaken on a systematic basis in order to increase the stock of knowledge […]". This goal can be achieved in a wide variety of ways. We can count "things", add them up, calculate statistics about them, and get a reliable overview of "things". We can also describe those "things" in great detail and question why they are the "things" that they are, and what that means in the context of those "things". Which approach is better? The answer is that this depends on what you want to learn about those ''things". In other words, if we want to "increase the stock of knowledge", it partly depends on which knowledge you are interested in increasing (your "puzzle'' and specific questions), and partly also on what you consider "knowledge" to be in the first place. In Research Methods I, we will address these issues in great detail, and we will go into how a research project can be set up in alignment with the answers to these questions.
Research Methods I (SKI1004), Research Methods II (SKI1005), and the Research Project (PRO1012) form one coherent semester-long block of courses in which you will start from scratch and end with your own finished research project. Along the way, we will discuss a wide variety of research approaches frequently used in the humanities, social sciences, and the sciences. Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other's work, no matter how diverse that may become in the course of the next three years.
The Research Project is the conclusion of your research methods training, and an opportunity to put everything you learned in to practice. We will build on the foundation laid out in Research Methods I and Research Methods II. You ended Research Methods II with a final research proposal, which forms the starting point for the Research Project. Assuming that this final proposal was indeed fully ready for execution, you can start gathering data and/or analyzing your data from day one of the Research Project. You will finish with an extended paper that presents your findings.
For additional support during your Research Project, consider getting in touch with the UCM Methods Lab through www.MethodsLab.nl or info@methodslab.nl.

Recommended Literature
- Book chapters & journal articles announced in the course manual
- Readings relevant to your research project.

Instructional format
Research-Based Learning & tutorial group meetings for feedback on the research process and paper.

Examination
Grades are based on the final research project outcome. It is assumed that this normally takes the form of an empirical paper, but alternative forms such as a documentary, photographic exhibition, etc. are possible and encouraged if your tutor and the course coordinator approve. In addition, each research team presents their findings during the final conference (graded).

PRO2003   Writing Project: "The Journal"

Semester	Period	ECTS	Project	Device Free
Fall / Spring	3 / 6	5		No

Prerequisites
Either SKI2084 Writing in an Academic Context or SKI2049 Argumentation I.

Objectives
- To apply academic writing/argumentation skills gained in skills courses in order to improve written projects.
- To do an in-depth analysis of a topic, using the knowledge (theoretical framework, factual context, overall interpretations and analyses) acquired during regular content courses.
- To write an academic review of a paper and respond to such review in a professional manner.
- To gain familiarity with academic journals and their mode of operation.

Description of the course
The overall format of the project is that of a fictitious academic peer-reviewed journal, for which the members of a tutorial group serve both as editors and contributors. Students will select a tutorial group dedicated to a particular topic. Under the guidance of their tutor and aided by the feedback from their peers, students will write a research paper in which they explore the topic of their group, and use, refer to, and compare several sources dealing with the topic. The topic of the journal issue is the same for all members of a group, but students will examine their own specific research question within this topic. During the process of researching and writing, the work of all group members will be evaluated by their peers, on the basis of criteria agreed upon by the group as relevant and fitting for their journal (in addition to a set of basic criteria given beforehand). Students will conduct a review of relevant writing and argumentative aspects of a peer's paper and exchange reviews with their peers in order to gain a better understanding of what it means to write an excellent paper in their chosen field. The final papers will be bundled in the journal of that tutorial group. All the tutorial groups will present their group's journal at The Journal Fair.

Literature
- Reading lists from tutors of each tutorial group.
- Independent literature research.

Please be aware that:
Towards the end of period 2 or 5 (depending on when the project is taken) students must sign up for a specific journal topic. There is a choice of several different topics that reflect the expertise of UCM academic staff (international relations, economics, law, sociology, psychology, the arts, history and philosophy). Short descriptions of each topic will be published on StudentPortal in due course and students can sign up for their topic of their choice on StudentPortal.

Instructional format
Tutorial group meetings and a lecture. The project spans over the four weeks of the project period, and that there is a 100% attendance requirement. In addition to tutorials, groups are highly encouraged to meet without the tutor in order to ensure a unified and cohesive journal in the end.

Examination
A research paper (individual grade), a peer review and a response to the peer review (individual grade) and an academic journal (group grade).

PRO2004   Project Academic Debate

Semester	Period	ECTS	Project	Device Free
Fall / Spring	3 / 6	5		No

Recommended
SKI2007 Presentation Skills, SKI2049 Argumentation I.
Courses relevant to the available debate group topics.

Objectives
- Acquire and/or improve communication and debating skills.
- Apply those skills to public speaking and debating.
- Become (more) informed on the topic(s) of debate.

Description of the course
Debating skills are an key component of academic life. This means that you should be able to defend your own position and refute opposing positions by providing substantial arguments based on relevant academic sources.

In this project, you will prepare, present and defend with peers a position for an academic debate on a specific topic. The available topics emerge out of a wide range of UCM courses from different concentrations. Students can submit their preferences for topics beforehand, but should be prepared to commit to any topic to which they are assigned. At the start of the project, each group will discuss their topic and settle on a concrete proposition for their final debate. After that, they splits up into a PRO ("yes") and a CON ("no") side; PRO will argue in favor of and CON will argue against the proposition. The two sides prepare separately for the final debate.

A crucial part of the preparation for their final debate is writing a collective position paper based on self-study of academic sources. The purpose of this position paper is to be informed about the topic of the debate, by developing arguments, anticipating counterarguments, and coming up with rebuttals to these counterarguments.

In addition, there will be practice debates, which focus on delivery. At least one of these practice debates will be scheduled in the lecture hall. The purpose of these practice debates is to familiarize students with the setting of a debate and to provide them with feedback on their public speaking skills. The topics for the practice debates will thematically relate to, but nevertheless significantly differ from, the proposition of the final debate.

Literature
- Students will have to search, read and use academic literature on their debate topic themselves.

Instructional format
Introduction lecture and introduction workshop, tutorials (including two practice debates), final debate.

Examination
Individual presentation of an argument, collective academic position paper, practice debates, final debate.

PRO2011   Project Deep Reading

Semester	Period	ECTS	Project	Device Free
Fall	3	5		No

Prerequisites
None.

Objectives
- Students will undertake an in-depth reflection and commentary on a single seminal text linked to the humanities, social sciences or natural sciences.
- Students will learn about the process of 'deep reading' as well as the *genre* of writing critical and substantive book reviews.

Description of the course
In this project students will engage in a deep reading of a text linked to seminal themes and issues in the humanities, social sciences, or natural sciences. Deep reading is a process of thoughtful and deliberate reading through which a reader actively works to critically contemplate, understand and ultimately enjoy a particular text to the fullest extent possible. Rather than selectively skimming for facts or speed-reading for summaries, the process of deep reading means slowing down, re-reading and even stopping periodically to more fully contemplate specific pages or passages. Having considered and recognized what a text says, deep reading goes a step further and strives to reflect upon the broader implications or consequences of the text; i.e. what does the text 'do'? Although deep reading is a profoundly personal experience, within the context of problem-based learning the process of deep reading also rests on the premise that profound understanding and appreciation of a text emerges through group-based discussion and deliberation.

Literature
- A single seminal text (classic or contemporary) will be assigned by individual tutors.

Instructional format
Tutorial group meetings and individual and collaborative work.

Examination
Final paper in the format of an extended book review and several short reflective essays.

PRO3005 Public Policy Evaluation & Analysis Project

Semester	Period	ECTS	Project	Device Free
Spring	6	5		No

Prerequisites:
SSC3011 Public Policy Evaluation; and at least one of the following: SKI3002 Argumentation II; SKI2084 Writing in an Academic Context; and two additional 2000 or 3000 level courses in the social sciences field:(Social) psychology, political science, economics or/and sociology. SSC2053 Public Health Policymaking is highly recommended.

Recommended:
As current complex policy problems request a multi-disciplinary approach and as such a multidisciplinary team, experience and knowledge of the following courses can be relevant and interesting as well: . SSC2053 Public Health Policymaking; Ethnography and Qualitative Interviewing (SKI2085, SKI3052, and PRO3009); SKI2048 Introduction to Discourse Analysis; SSC2061 Statistics I; SSC3018 Statistics II; UGR3001 MaRBLE; UGR3003 Applied Research & Internship Project: SSC3033 Economic Psychology; SSC3009 Public Economics; SCI2010 Introduction to Game theory; SCI 3051 Data Analysis and there might be others you deem relevant. If so, explain this to us in your application letter.

Registration procedure:
This year, as we start anew, there is a limited number of places available for this project. If you would like to join this project you need to apply for it by filling in the application form on MyUCM. At the time of the course registration period, we will make available some broad topic area(s) on MyUCM. However, the specific policy(policies) that is(are) going to be evaluated in the project will be coming from (one of) you.
The application form asks you to :
- Write a short but reasoned project proposal in which you present the specific public policy that according to you should be evaluated and why this is interesting. This can be a topic within the broader topic area(s) that were suggested or something else. We will provide some guidelines on MyUCM for writing your proposal.
- And provide your motivation to follow the project. This should cover an explanation as to a) how participating in the project adds to your curriculum; b) how your participation in the project adds to the project; c) why you think you are well prepared to follow the project and d) an overview of the relevant courses that you took and how they can add to the project.

The application needs to be submitted in advance of the course registration deadline. The course coordinators will select students by means of the application form (combi of course requirements suitability of the project proposals (policies); motivation and background knowledge & experience). It will be communicated in a timely manner, but no later than 6 weeks before the start of the project, whether the application for the project was successful. If access to the project is denied, then you will be allocated to a backup project. Please indicate the backup project on your course registration form.

Objective:
- To provide students with an advanced and in-depth experience in systematically conducting a public policy evaluation by analyzing, proposing, deciding and evaluating a complex local, regional, national or global public policy (problem) with a multidisciplinary team;
- To integrate and deepen their knowledge of different relevant disciplines and courses into one field of application: public policy evaluation & analysis
- To integrate and deepen their experience with applying their acquired analytical skill set to a real-life policy.
- To provide them with additional insights, awareness and experience in team dynamics and how they are in it as an individual

Description of the course:
In the project students have the possibility to systematically evaluate a real-life public policy. In doing so they will work in small teams (probably 3 teams of 4 students per tutorial group). Students will propose a policy (in a suggested broader topic area) for evaluation and analysis in their application. The coordinators make a pre selection of those policies that seem suitable for a team project. In the first week of the project students will jointly decide on the topic they will address based on this pre selection, design a research and workplan, and make agreements how they will work together as a team. The second and the third weeks are dedicated to actual research on the policy, guided by the students' previously developed plan. During this time students also start working on their written policy analysis report and the presentation thereof. In the fourth week the report and

the presentation will be finalized, and the different sub-groups will present their findings to each other. This will be rounded off with an evaluative workshop at the end of the project period.

Literature:
- Course manual & possible additional readings depending on the topic area

Instructional format:
- Tutorial meetings
- Project (sub)group meetings
- Some supportive workshops (e.g. on groupdynamics)

Examination:
As in real life a team as a whole is held responsible for its performance and results, here too, the final grade is based on the performance of the team(sub-)group. This will be an integral part of the learning experience and the reflective process during this project.
- A public policy evaluation analysis (report) (group assignment) 60%
- A presentation per sub-group (group assignment) 40%

PRO3006   Conference

Semester	Period	ECTS	Project	Device Free
Fall	3	5		No

Prerequisites
SKI3050 Preparing Conference.

Recommended
SKI2007 Presentation Skills

Objectives
- To train students in skills required for preparing an academic conference.
- To train students in rehearsing, adapting and fine-tuning their contributions to a conference.
- To train students in offering a conference.
- To train students in evaluating a conference.

Description of the course
In this project, students will finalize and offer the conference that has been prepared in the second period of this semester. The purpose of the conference will be to provide a platform for an audience of approximately 240 first semester students, scholars and professionals. The conference will allow people to meet and share ideas, present findings and discoveries and connect to fellow academics.
      The project consists of three parts, being:
1) Final preparations for the conference, including dress rehearsals, peer feedback and dealing with the organisation of the conference.
2) Offering the conference to the target audience, organisation on the conference day(s) and gathering information for evaluation of the conference.
3) Evaluating the conference and writing a report with evaluations and recommendations for future editions

A wide variety of individual interests in the Sciences, Social Sciences and Humanities is welcomed in order to offer a diverse conference. The project fosters an interdisciplinary approach among the participating students.

Literature
- E-reader.

Instructional format
Training, feedback and peer review in small groups and a conference setting.

Examination
Students will be assessed and graded on (1) the opening session, parallel session, closing session or PR and logistics of the conference and its evaluation(group assignment), (2) the lecture/workshop and its evaluation (assignment by two or three students).

PRO3008   Think Tank

Semester	Period	ECTS	Project	Device Free
Fall / Spring	3 / 6	5		No

Prerequisites
The following modules are considered highly relevant in preparation of the project and at least two modules from the following list are required: SKI2049 Argumentation I; SKI3002 Argumentation II; SKI2084 Writing in an Academic Context; SKI2048 Introduction to Discourse Analysis; Ethnography and Qualitative Interviewing (SKI2085, SKI3052, and PRO3009); SSC2061 Statistics I; SSC3018 Statistics II; COR1005 Theory Construction and Modelling Techniques; SSC3011 Public Policy Evaluation; UGR3001 MaRBLE; UGR3002 The Documentary; UGR3003 Applied Research & Internship Project.

The coordinators would like to emphasize that 1) the project and the nature of the assignment require some experience in academia. It is therefore recommended for students in their fourth semester or later, 2) the project is time-consuming and has a high workload that requires high motivation. Students should have a broad interest in e.g. policy development and research and analysis. Due to the specific nature of the project and the fact that group work is an essential element, students should take into account that they need to be available during entire weekdays throughout the project.

Participating in Think Tank as part of the regular workload at UCM is doable but demanding. Therefore, having a higher workload due to e.g. additional or parallel projects is not allowed.

Objectives
- Let students work together and set up a problem analysis based on the assignment given by an external client, i.e. to develop skills concerning critical analysis, including the analysis of a problem, conceptualizing a problem as a case study (the ability to see the particular problem within a wider context), and to generate new knowledge relevant to the case at hand (Ernest Boyer's scholarship of 'discovery' and 'integration')
- Let students write a report based on an assignment that was given to them, i.e. skills related to formulating finding and recommendations in a comprehensive yet concise manner (Boyer's scholarship of 'application' and 'teaching')
- Let students present their report to the client's representative and a group of experts (Boyer's scholarship of 'teaching').
- Let students work together and do research based on the assignment that was given to them, i.e. to develop skills concerning organization of work, and collaboration in a team (not specifically related to Boyer, yet instrumental towards all four aspects at the level of collaborative learning).

Description of the course
Students will form a 'think tank' and write and present an extensive and elaborate (policy) recommendation for an external client, i.e. a company or organization. The project coordinators will offer a topic in advance. A creative and critical analysis of the problem at hand will lead to the application of knowledge and skills acquired at UCM through previous course work, and new insights developed during the project.
The first week will focus on a problem analysis and an analysis of the knowledge and expertise of the members of the think tank. The second week will focus on doing research. The third week will deal with discussing and formulating solutions. During the final week students will present their report to their client.
Besides having meetings with their fellow students and a tutor, the group might meet with guest experts (either invited by the coordinators or by the students themselves) and undertake self-organized field trips and external visits in order to obtain the required information.

Note that students will receive an overview of the clients and assignments approximately one month before the start of the project. They are requested to indicate their preference by means of ranking. Based on that, students will be assigned to groups and tutors and scheduled accordingly.

Literature
- There is no general literature or course books that students need to buy or possess. Students will choose, read and use literature that is specifically related to their topic.
- E-reader.

Instructional format
Students will meet with their group on a daily basis by means of tutorial group meetings, external visits and workshops.

Examination
Problem analysis (group assignment), research memo (individual assignment), final group report and final presentation of the report (group assignment).

PRO3009 Ethnography and Qualitative Interviewing III

Semester	Period	ECTS	Project	Device Free
Fall	3	5		No

Prerequisites

SKI2085 Ethnography and Qualitative Interviewing I and SKI3052 Ethnography and Qualitative Interviewing II.

Objective

- To produce a comprehensive narrative of their research findings.

Description of the course

This is the third part of a three module course on qualitative research methods. In this module students will be mainly engaged in writing the final analysis of their research findings. The relevance of their findings must be contextualized within the larger social and political forces within which the research is embedded. The course will end with a symposium where students will have the opportunity to present their research.

Literature

- Hesse-Biber, S.N. (2011). *The Practice of Qualitative Research.* Sage Publication, Thousand Oaks, California, Second Edition.
- Burawoy, M. (2000). *Global Ethnography.* Berkeley: University of California Press.
- Excerpts from several books on qualitative research that are available at the UCM reading room, for example, Silverman, D. (2005). *Doing Qualitative Research Robin, H. (2005). Qualitative Interviewing: The Art of Hearing Data and Ritchie, J. (2003). Qualitative Research Practice.*

Instructional format

Weekly meetings to support the writing process and a two day undergraduate Symposium where students present their research to each other.

Examination

Writing up the final analysis of the research findings (5.000 - 6.000 words).

PRO3012 Science Research Project: Neuropsychology

Semester	Period	ECTS	Project	Device Free
Fall	3	5		No

Prerequisite and registration procedure

SSC2061 Statistics I and courses that are appropriate the particular project. This will be specified in the topic description.

The topic description will be made available on MyUCM at the time of the course registration period. If you would like to join this project you need to apply for it by filling in the application form on MyUCM. Part of this form asks you to elaborate on your motivation to follow the project. This should cover an explanation as to how participating in the project adds to your curriculum, why you think you are well prepared to follow the project and an overview of the relevant courses that you took. The application needs to be submitted in advance of the course registration deadline.

Depending on the topic being offered the number of available spots might be limited. Therefore, the course coordinator reserves the right to only select the students that are deemed most suitable. It will be communicated in a timely manner, but no later than 6 weeks before the start of the project, whether the application for the project was successful. If access to the project is denied, then you will be allocated to a backup project. Please indicate the backup project on your course registration form.

Note: This is a time-consuming, full-time project with a high workload. In principle, students should take into account that they need to be available during entire weekdays throughout the project.

Objective
- To let students work together and apply their knowledge of the Natural and Life Sciences in the context of an empirical research project.
- To let students work together and give them first-hand experience of full-time academic research by involving their team in experimental neuropsychological research.

Description

In the Neuropsychology Research Project students will form a small research group and join an ongoing research project in the Basic & Applied Neurodynamics (BAND) laboratory at the Department of Neuropsychology and Psychopharmacology. Work in the lab mainly focuses on temporal aspects of cognitive and motor behavior. Your tasks will include all aspects of empirical research from the planning and organization of an experiment to the reporting of the results. To get an idea of ongoing research at the laboratory, we encourage you to look at the lab's website (https://band-lab.com/).

Literature
- There is no general literature or course book that students need to buy or possess. Students will choose, read, and use literature that is specifically related to their topic.

Instructional format

Students will meet with their group and supervisor in the laboratory on a daily basis.

Examination

The assessment depends for a large part on the supervisors and the projects. There will be (at least) two moments and (preferably) two forms of assessment (e.g. a presentation of the results during a general research meeting of the department and/or a written report of the findings).

PRO3013 Science Research Project: Data Science

Semester	Period	ECTS	Project	Device Free
Spring	6	5		No

Prerequisite and registration procedure
Courses that are appropriate for the project that you choose, which will be specified in the project description. Generally, it is assumed that students have taken one or more courses related to data science (such as SCI2011 Introduction to Programming, SCI2033 Datamining, SCI2036 Artificial Intelligence, SCI2039 Computer Science, SCI3051 Data Analytics).
The topic description will be made available on MyUCM at the time of the course registration period. If you would like to join this project you need to apply for it by filling in the application form on MyUCM. Part of this form asks you to elaborate on your motivation to follow the project. This should cover an explanation as to how participating in the project adds to your curriculum, why you think you are well prepared to follow the project and an overview of the relevant courses that you took. The application needs to be submitted in advance of the course registration deadline.
Depending on the topic being offered the number of available spots might be limited. Therefore, the course coordinator reserves the right to only select the students that are deemed most suitable. It will be communicated in a timely manner, but no later than 6 weeks before the start of the project, whether the application for the project was successful. If access to the project is denied, then you will be allocated to a backup project. Please indicate the backup project on your course registration form.

Note: This is a time-consuming, full-time project with a high workload. In principle, students should take into account that they need to be available during entire weekdays throughout the project.

Objectives
- To provide students the opportunity to learn and apply knowledge about Data Science in the context of a team-based research project.
- To provide students first-hand experience of full-time academic research, by fully involving the team in an ongoing research project along with data science researchers.

Description
In the Data Science Research Project students will form a small research team and join an ongoing research project in the Institute of Data Science. The project will be driven by a research question to provide a solution to a domain-specific problem, which requires the application of Data Science methods. Your tasks will include all aspects of empirical research from the formulation of the research question, choosing and implementation of the right methodology, performing experiments, interpreting and analyzing results along with the scientific reporting of those results.
We encourage you to look at the institutes website to get an idea of ongoing research:
https://www.maastrichtuniversity.nl/research/institute-data-science.

Literature
- There is no general literature or course book that students need to buy or possess. Students will choose, read, and use literature that is specifically related to their topic.

Instructional format
Students will meet with their group and supervisor in the institute on a daily basis.

Examination
The assessment depends for a large part on the supervisors and the projects. There will be (at least) two moments and (preferably) two forms of assessment (e.g. a presentation of the results during a general research meeting of the department and/or a written report of the findings).

PRO3014   Science Research Project: Biomedical Engineering

Semester	Period	ECTS	Project	Device Free
Fall	3	5		No

Prerequisite and registration procedure
Courses that are appropriate for the project that you choose, which will be specified in the project description. Generally, it is assumed that students have taken one or more courses related to biomedical sciences (such as SCI2035 Biochemistry, SCI2037 Cell Biology, SKI2077 Lab Skills Cell Biology, SKI2086 Lab Skills: Biochemistry). The topic description will be made available on MyUCM at the time of the course registration period. If you would like to join this project you need to apply for it by filling in the application form on MyUCM. Part of this form asks you to elaborate on your motivation to follow the project. This should cover an explanation as to how participating in the project adds to your curriculum, why you think you are well prepared to follow the project and an overview of the relevant courses that you took. The application needs to be submitted in advance of the course registration deadline.
Depending on the topic being offered the number of available spots might be limited. Therefore, the course coordinator reserves the right to only select the students that are deemed most suitable. It will be communicated in a timely manner, but no later than 6 weeks before the start of the project, whether the application for the project was successful. If access to the project is denied, then you will be allocated to a backup project. Please indicate the backup project on your course registration form.

Note: This is a time-consuming, full-time project with a high workload. In principle, students should take into account that they need to be available during entire weekdays throughout the project.

Objective
- To provide students the opportunity to learn and apply knowledge in the field of biomedical engineering in the context of a team-based research project.
- To provide students first-hand experience of full-time academic research, by fully involving the team in an ongoing research project along with biomedical researchers.

Description
In the Biomedical Engineering Research Project students will form a small research team and join an ongoing research project in the Institute for Technology-Inspired Regenerative Medicine (MERLN). The project will be driven by a research question to provide a solution to a domain-specific problem, which requires the methods at the interface of biology and engineering. Your tasks will include all aspects of empirical research from the formulation of the research question, choosing and implementation of the right methodology, performing experiments, interpreting and analyzing results along with the scientific reporting of those results.
We encourage you to look at the institutes website to get an idea of ongoing research:
https://www.maastrichtuniversity.nl/research/institute-technology-inspired-regenerative-medicine.

Literature
- There is no general literature or course book that students need to buy or possess. Students will choose, read, and use literature that is specifically related to their topic.

Instructional format
Students will meet with their group and supervisor in the laboratory on a daily basis.

Examination
The assessment depends for a large part on the supervisors and the projects. There will be (at least) two moments and (preferably) two forms of assessment (e.g. a presentation of the results during a general research meeting of the department and/or a written report of the findings).

PRO3015   Research Studio, Where Art and Academia Meet

Semester	Period	ECTS	Concentration	Device Free
Fall	3	5	all	No

Prerequisites
Students who register for *PRO3015 Research Studio, where art and academia meet* also have to register for *SKI3003 Research Studio, introduction to applying an art practice as research method* in the same semester. It is not possible to take either module separately due to the integrated set-up of this skills training and the project.

Objectives
The learning objectives addressed in the project part of Research Studio add to the ones from the skills training part as follows. After having familiarized themselves with artistic research methodologies and ways to discuss and engage in an art practice, Students will (continue to) learn:
1. To communicate about their research process to a specific audience, which they define as fitting to their research process. This includes finding an appropriate 'form' to communicate about their research that follows from the approach developed during the research process and reflects on the methodologies involved.
2. Collaboration in a diverse and interdisciplinary team, including teamwork, communication skills and adaptability.
3. Transferring their knowledge and skills to a practical issue of societal concern.

Description of the project
The two modules of Research Studio invite to explore conducting research in an interdisciplinary team consisting of theatre artists and academics. Bridging the domains of art and academia, Research Studio challenges students to get out of their 'comfort zone' and transfer their academic knowledge and skills to a new working environment. This interdisciplinary view on research is underpinned by the idea that art and academia are not separate domains, but 'particular kinds of experimental practices in a more general experimental culture' (Gere, 2010). Taken together, the skills training and project trigger creativity, require adaptability and endorse critical reflection on established research practices, methods and ways of knowing. They challenge to critically consider the questions how do we know what we know? And what for?
The project continues from the research plan created during the skills training. Each team will work with our resident artists researching their chosen questions by artistic and academic means and will work towards presenting their findings and their research journey in an 'Open Studio' at the end of the period.

Instructional format and assessment
As an introduction to research incorporating an art practice, the project involves a variety of activities from both theatre and academia. Examples are discussion / brainstorm sessions, lectures, practical workshops, fieldtrips and individual reading and writing. During the second part (project) the focus is on how an art practice can play a role in the students' own research. Students will apply what they learned during the skills part by borrowing from the art practice in their own research.
Assessment focuses on documentation of and reflection on the learning process. For this students keep a research portfolio. Additionally, they work towards creating a presentation of their work in an 'Open Studio' at the end of the term. The Open Studio does not ask to present a final 'work' (e.g. paper, presentation or artwork) but rather to provide an insight in the research journey and any findings, issues or ideas that came out of it.

PRO3016   Social Sciences/Humanities Research Project

Semester	Period	ECTS	Project	Device Free
Spring	6	5		No

Prerequisite and registration procedure

Courses that are appropriate for the topic that you choose. This will be specified in the topic description. Generally, the project requires some experience in academia. It is therefore recommended for students in their fourth semester or later.

The topic descriptions will be made available on *MyUCM* just before the course registration period. If you would like to join a topic offered in this project you need to apply for it by filling in the application form on *MyUCM*. Part of this form asks you to elaborate on your motivation to follow the particular topic that interests you and how it adds to your curriculum. Additionally, you should elaborate on relevant skills, competences and an overview of the relevant courses that you took. Your application needs to be submitted in accordance with course registration deadlines.

The topics being offered are likely to have a limited number of available spots. The course coordinator in conjunction with the staff members offering topics, reserve the right to select students. Please indicate a backup project on your course registration form in case you are not selected for participation in the project.

Note: This is a time-consuming, full-time project with a high workload. In principle, students should take into account that they need to be available during entire weekdays throughout the project.

Objective

- To give students a first-hand account of full-time academic research by involving them in an ongoing UCM research project.
- To let students work together in a team and apply their knowledge and skills in the context of a research project. This includes the strengthening of research, writing and analytical skills.
- To further develop skills concerning organization of work and collaboration in a team.

Description

In the Social Sciences/Humanities Research Project students will form a small research group and join an ongoing UCM research project. They are supervised by a UCM researcher, who provides a specific topic that relates to her/his own research. Students work on the topic in a team with the goal to produce an output that is of relevance to the supervisor's research. This requires the application and further development of knowledge relevant to the project in question and of research, writing and analytical skills. The exact setup of the project varies according to the specific research topic that is offered.

Further information about the research topics and the specific setup of each project will be made available on *MyUCM* just before the course registration period.

Literature

Students will choose, read, and use literature that is specifically related to their topic.

Instructional format

Research-Based Learning, group meetings and individual research. The specific format may vary according to the topic in question.

Examination

The assessment depends on the topic and the UCM Researcher offering the project. There will be (at least) two moments and (preferably) two forms of assessment (e.g. a presentation of the results during a general research meeting of the department and/or a written report/paper outlining the findings).
.

CAP3000   Capstone

Semester	Period	ECTS	Capstone	Device Free
Fall / Spring	1-3 / 4-6	10		No

Prerequisite
To participate in Capstone students should be in their last semester at UCM (usually the 6th except for transfer students) and have at least 140 ECTS at the start of Capstone.

Note: that Capstone encompasses the regular two skills trainings and project of a UCM semester. Participating in Capstone as part of the regular workload at UCM is doable, but demanding (i.e. next to the two courses per period). Therefore, having a higher workload due to e.g. additional courses, skills trainings and/or projects is not recommended..

Objectives
- To enable students to express their individual academic profile through a scholarly project during their last semester at the College.
- To assist senior students in the transition from undergraduate education to a master's program or the labor market.

Description of the course
Capstone is the culmination of a student's academic work at UCM and is comparable in function to a bachelor thesis. It is a full semester module for which students receive 10 ECTS. During the first weeks students will work on writing a proposal in which they formulate their individual goals and determine a topic and format. In addition, students will choose an advisor. The advisor provides the student with advice and guidance on the content of the Capstone product.

Students work on Capstone individually. There will be meetings with the tutors, fellow students, and the coordinator. These meetings support the individual work on Capstone, by way of presenting one's own work to other students and giving and receiving feedback. Furthermore, the meetings are intended to monitor the progress and writing process. Students will meet with their individual advisor separately from the group meetings. Those meetings are intended for discussing the content of the Capstone and for receiving individual feedback on the work in progress and the final product.

An outline is handed in at the start of the second period of Capstone. A complete methods section is handed in before the third period of Capstone. Both the outline and the methods section are discussed with the advisor. The last period is for completing and revising the Capstone.

Literature
- There is no mandatory literature. Students will choose, read and use literature that is related to their Capstone topic.

Instructional format
Individual work, tutorial group meetings, guidance from Capstone advisor and support hours.

Examination
Students will be assessed on a proposal, an outline, a methods section and the final version of their Capstone. In addition, they will present their Capstone to fellow students in the second period of the project. The final Capstone will be evaluated by the advisor and a second grader.

Undergraduate Research (UGR)

UGR3001   MaRBLe Undergraduate Research

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	1 - 3 / 4 - 6	10 per semester		No

NB: Exchange students who are interested in doing the MaRBle project can only apply if they stay for a full year and then only in their second semester.

MaRBLe is an acronym for **Ma**astricht **R**esearch **B**ased **Le**arning, and is Maastricht University's excellence programme that brings multidisciplinary scientific research to the bachelor phase. It is a semester long research program carrying 10 ECTS. It is no longer possible to do multiple MaRBLe projects unless you receive special permission by the Board of Examiners.

MaRBLe encompasses the two Skills and one Project offered during a semester. In most MaRBLe projects, the first course period will be mainly dedicated to an introduction into the specific field and related methodologies, and a research plan or proposal will be written. During the second and third periods the students will engage in their own independent research, while staying in close contact with the other members of their group as well as their supervisor to discuss progress and challenges. At the end of each semester UCM will organize a symposium during which all participating students will present their research to their fellow researchers and the larger UCM community. Around week 3 of the semester students will share their research plans in a poster session.

Prerequisites
More than anything else, the MaRBLe undergraduate research program is aimed at students with a great appetite for learning and research. Students should ideally have a progress rate of ≥0.9, and a grade average of ≥7.5. In addition, specific courses may be required for particular projects (these prerequisites will be mentioned in the announcement of offered projects). At least as important as these 'technical' requirements, we expect students who apply for MaRBLe to be motivated, and to have a clear idea on how the project they apply for fits into their individual UCM curriculum. Students will apply by writing a letter of motivation, and if eligible, can be invited for an interview.

Project objectives
- To enhance the learning experience of students by integrating research into their undergraduate curriculum.
- To prepare students for graduate research by introducing them to and educating them in the relevant skills and knowledge.
- To emphasize the ability to identify and formulate academic problems.
- To select and apply relevant research methodologies accordingly.

To reinforce the awareness of how academic work relates to society: how it may respond to trends and issues in society, and how it may initiate new ideas.

Description of the project
        MaRBLe is a form of RBL, Research-Based Learning. In RBL, learning is based on research that students do themselves, rather than being dependent on research done before and by others. Small groups or individual students will conduct research under the guidance of a senior researcher. MaRBLe offers a unique opportunity to develop one's own research topic within the context of a pre-defined research program. In this way, student researchers will make an actual contribution to ongoing research, and will experience first-hand what is involved in doing research. During the project, specific skills will be addressed at the appropriate time: e.g. problem analysis, writing a proposal, data selection and analysis reporting and presenting

Literature
Varies per research topic.

Instructional format
Research-Based Learning, group meetings and individual research.

Examination
Examination may vary and depends on the nature of the research conducted, but will at a minimum include:
- A research plan (ungraded)
- Presentation of findings
- Research paper or report, or other final output such as a documentary, exhibition, etc.
- Further assessments can be set by the project supervisor.

For the most recent overview of MaRBLe projects, see the link below
http://bit.ly/UCMmarble

Students may also suggest their own custom project in close collaboration with a researcher at UM or elsewhere, but be aware that this requires significant additional time investments ahead of time. In addition, this process needs to be initiated well in advance of course registration. Contact the course coordinators for further information.

UGR3002   Undergraduate Research / The Documentary

Semester	Period	ECTS	Concentration	Device Free
Spring	4 - 6	10 per semester		No

NB: Exchange students who are interested in UCM Documentary can only apply if they stay for a full year and then only in their second semester.

Prerequisites
First year students are not eligible for this project. There are no prerequisites for this project, however, the Ethnography track and a topic related course in Film Studies such as HUM2043 Film Art or Narrative Media are strongly recommended. Nevertheless, essential requirements are enthusiasm and the motivation to work hard and to develop new skills. Students are required to have a progress rate of at least 0.9 and a GPA of at least 7.5. Students will have to apply individually by writing a motivation letter, which should [i] explain how taking this project fits clearly into the student's academic plan; [ii] include an intended research topic; and [iii] provide a brief description of any working knowledge of digital film production. Students who apply will be accepted on an individual basis.

Project objectives
By the end of this project, students will:
- Develop an understanding of the basic theoretical and methodological aspects of filmmaking as a research method (visual ethnography);
- acquire and apply basic research-filmmaking skills, i.e., planning, filming and editing; and
- produce a research film that investigates and answers a relevant academic question.

Description of the project
Many of us regularly turn to documentaries as entertaining and engaging ways of learning about new topics from different perspectives. Visual communication – including non-fiction film – is increasingly saturating all aspects of our lives, and images and sound now constitute a large part of the information and entertainment we seek out and consume in daily life. In academia, too, visual methods are increasingly part of the toolkit used to do research and share research with both specialist and general audiences. Audiovisual media, like documentaries, can broaden the topics we can research, add new dimensions to the knowledge we create, and make scientific findings accessible to diverse audiences. As such, filmmaking can be a way of conducting serious academic research – asking questions, gathering data, and presenting arguments – in novel and creative ways.

This project will extend your existing academic skills into a new arena by introducing you to an alternative medium for doing and presenting academic research, namely through filmmaking based on the visual ethnographic tradition. You will learn basic filmmaking skills and visual research methods and use them to design and carry out your own research project in groups. The result will be a short research film, through which you will answer an academic research question and present new information in accessible, informative and appealing ways. By the end of the project, you will have acquired the tools necessary to design, record, and edit your own research film which deals with an academic question in a field of your interest.

The Documentary is a semester long group research project carrying 10 ECTS. The level of the project is equivalent to that of a 3000 level course, as we expect students to acquire entirely new skills while building upon their existing academic knowledge and research skills. It encompasses the two skills trainings and the project offered during the Spring Semester. During the first period, students will be acquainted with the theoretical and methodological underpinnings of research filmmaking. Simultaneously, the groups will start to develop their research. In the second period, students will do their research by conducting visual ethnographic fieldwork. In the final period, students will edit their documentaries.

Literature
E-Reader

Instructional format
Tutorial sessions, workshops, and feedback sessions.

Examination
A range of individual (pass/fail) and group (graded) assignments, including film reviews, visual exercises, research proposal, extended literature review, group presentations, fieldwork logbooks, filmmaker statements and final film.

UGR3003 Applied Research & Internship (ARI) Project

Semester	Period	ECTS	Concentration	Device Free
Fall / Spring	1-3 / 4-6	10 per semester		No

Prerequisites and registration procedure
This project asks for highly motivated students, who are willing and able to work hard, and represent UCM at an external client.
Students who are interested in participating are invited to consult the list of clients on MyUCM at the time of the course registration period. Specific prerequisites in terms of courses and skills apply for each case.
If you would like to join the ARI project you need to apply for it by filling in the application form on MyUCM. Part of this form asks you to elaborate on your motivation to follow the project. This should cover an explanation as to how participating in the project adds to your curriculum, why you think you are well prepared to follow the project and an overview of the relevant courses that you took. You will also have to submit a CV and you might be invited for a personal interview with the client and the academic supervisor. The application needs to be submitted in advance of the course registration deadline. If eligible, you can be invited for an interview.
This is a selective project. Therefore, the course coordinators reserve the right to only select the students that are deemed most suitable. It will be communicated in a timely manner, but no later than 6 weeks before the start of the project, whether the application for the project was successful. If access to the project is denied, then you will be allocated to backup modules. Please indicate the backup modules on your course registration form.

Project objectives
- To enhance the learning experience of students by providing an opportunity to apply academic knowledge and skills acquired at UCM to a real-life case from a client that is active in the work-field of the student's interest.
- To prepare students for applied problem solving and applied research outside academia.
- To provide students with an opportunity to gain insights in a professional context in their field of interest.
- To reinforce the awareness of how academic work relates to society and how academic knowledge and skills can be used to address practical, societal issues.

Description of the project
In this project students will apply their academic knowledge and skills to a case presented by an external client (e.g. a company, a NGO or a governmental organization). The student produces an academically-grounded, but practically useful work-product that satisfies the needs of the client and UCM's academic requirements. The nature of the work-product differs depending on the discipline, client and case.
The research in this module is practice-based and catered to the needs of an external client. At the same time, the work for the client is research-oriented. The core of the project is the research the student conducts based on the case the client presents. In order for the student to gain knowledge about the client's professional environment, the context of the case and stakeholders involved, the module includes a four-week period of on-site work at the client's workplace during the project period (the internship). Additionally, the project contains two periods of 7 weeks in which the student works on the project one day per week independently. The precise set-up of the project and the tasks per period depend on the individual assignment the student gets. At the end of the semester, the student presents his/her work to both the client and the academic supervisor.

Similar to MaRBLe and The Documentary, the Applied Research & Internship project takes a full semester and replaces two skills courses and one project.
No general literature is assigned. Students need to select literature and conduct research that applies to their case.

Instructional format
This project is an individual 'live-case study'. Students meet up with their client and academic supervisor regularly. Additionally, students present their work in plenary peer-feedback sessions.

Examination
The assessment in this course includes writing a case-analysis and project proposal; writing a research update report and giving presentations. At the end of the semester, students hand in a specific 'work product'. The nature of this work product depends on the case and the client. Students and supervisors specify the scope, expected outcome and assessment criteria at the start of the project in a 'project contract'.
